Preface XIX

A Personal Foreword XXI

- 1 Nuclear Receptors as Drug Targets: A Historical Perspective of Modern Drug Discovery** 1
Eckhard Ottow and Hilmar Weinmann
- 1.1 Introduction 1
- 1.2 Short Historical Overview on Nuclear Receptors in Pharmacological Research and Drug Discovery 1
- 1.2.1 Glucocorticoid Receptor Research 2
- 1.2.2 Estrogen Receptor Research 3
- 1.2.3 Progesterone Receptor Research 4
- 1.2.4 Other Receptor Research 6
- 1.3 Recent Progress in Nuclear Receptor Drug Discovery 9
- 1.3.1 SERMs 9
- 1.3.2 Selective GR Modulators 11
- 1.3.3 Other Modulator Efforts: PR, MR, AR, PPAR, FXR and LXR 12
- 1.4 Modern Methods and Technologies in Nuclear Receptor Drug Discovery 13
- 1.4.1 Cofactor Interaction Screening 14
- 1.4.2 Microarray Technology and Gene Expression Profiling 14
- 1.4.3 Novel Computational Methods 15
- 1.4.4 Structural Biology 15
- 1.5 Summary and Future Developments 16
- References 17
- 2 Targeting the Nuclear Receptor–Cofactor Interaction** 25
Belen Vaz, Sabine Möcklinghoff, and Luc Brunsveld
- 2.1 Introduction 25
- 2.2 Evaluation of the Nuclear Receptor–Cofactor Interaction as a Drug Target 28

- 2.2.1 Evaluation of the ER–Coactivator Interaction 29
- 2.2.2 Evaluation of the AR–Coactivator Interaction 31
- 2.3 Inhibitors of the Nuclear Receptor–Cofactor Interaction 33
 - 2.3.1 Phage Display Peptides 33
 - 2.3.2 Nonnatural Cyclic Peptides 34
 - 2.3.3 Small Molecules 37
- 2.4 Perspectives 39
- References 40

3 **Untangling the Estrogen Receptor Web: Tools to Selectively Study Estrogen-Binding Receptors** 47

Ross V. Weatherman

- 3.1 Physiological Roles of Estrogen and the Challenges in Drug Discovery 47
- 3.2 Possibility of Multiple Targets 47
- 3.3 ER α 48
 - 3.3.1 Discovery and Characterization 48
 - 3.3.2 Expression Patterns and Response to Known Drugs 49
 - 3.3.3 Physiological Roles of ER α 50
- 3.4 ER β 51
 - 3.4.1 Discovery and Characterization 51
 - 3.4.2 Expression Patterns and Response to Known Drugs 52
 - 3.4.3 Possible Physiological Roles of ER β 52
- 3.5 ERR 53
 - 3.5.1 Discovery and Characterization 53
 - 3.5.2 Expression Patterns and Response to Known Drugs 53
 - 3.5.3 Possible Physiological Roles of ERRs 54
- 3.6 GPR30 55
 - 3.6.1 Discovery and Characterization 55
 - 3.6.2 Expression Patterns and Response to Known Drugs 55
 - 3.6.3 Possible Physiological Roles of GPR30 55
 - 3.6.4 Controversies Over GPR30 56
- 3.7 Membrane ERs 57
- 3.8 Integrated Estrogen Signaling 58
- 3.9 Conclusions 58
- References 59

4 **Subtype-Selective Estrogens** 65

Gerrit H. Veeneman

- 4.1 Introduction 65
 - 4.1.1 Biology of the Estrogen Receptors 65
 - 4.1.2 Interaction of ER α and ER β with Ligands 66
- 4.2 Subtype-Selective ER Ligands 69
 - 4.2.1 ER α Agonists 69
 - 4.2.1.1 Six-Membered Heterocycles 69

4.2.1.2	Five-Membered Heterocycles	69
4.2.1.3	Bicyclononene Ring Systems	70
4.2.1.4	Steroidal ER α Agonists	70
4.2.2	ER β Agonists	71
4.2.2.1	Diaryl-Ethylenes, Imidazoles, Isoxazoles and Thiophenes	71
4.2.2.2	Bicyclic 6+6 Ring Systems	72
4.2.2.3	Bicyclic [6+5]-Ring Systems	76
4.2.2.4	Tricycles	80
4.2.2.5	Tetracyclics	85
4.2.2.6	Steroidal ER β -Selective Estrogens	86
4.2.2.7	Miscellaneous ER β Ligands	87
4.2.3	ER α -Selective Antagonists	88
4.2.3.1	Triphenylethylenes	88
4.2.3.2	Benzothiophenes	91
4.2.3.3	Indoles	94
4.2.3.4	Spiroindenes	96
4.2.3.5	Flavanoids	97
4.2.3.6	1,2-Diphenyl-Tetraline-Type ER Ligands	100
4.2.3.7	Oxygen and Sulfur Variants	101
4.2.3.8	Nitrogen Variants	103
4.2.3.9	Five- and Six-Membered Heterocycles	105
4.2.3.10	Tri- and Tetracyclic SERMs	107
4.2.4	ER β -Selective Antagonists	110
4.2.4.1	Benzofluorenes	110
4.2.4.2	Triazines	110
4.2.4.3	Steroids	110
4.2.5	Full Antagonists	111
4.2.6	Dual-Profile Estrogens	113
4.2.6.1	ER α Agonist/ER β Antagonist	113
4.2.6.2	ER α Antagonist/ER β Agonist	115
4.3	Conclusions	115
	References	117

5.1	Introduction	127
5.2	Biology of ERs	130
5.2.1	ER α and its Transcriptional Activation	130
5.2.2	ER β	134
5.3	Therapeutic Basis for Targeting ER	135
5.4	SERMs	136
5.4.1	Origins of SERMs	136
5.4.2	Currently Approved SERMs Tamoxifen and Raloxifene	137
5.4.2.1	Tamoxifen	137
5.4.2.2	Raloxifene	142

5.5	Mechanisms of Action of SERMS	144
5.5.1	Mechanism of SERM Antiestrogenic Action	144
5.5.2	Structural-Based Mechanisms of SERM Estrogen-Like Action	145
5.5.3	Coregulator-Based Mechanisms of SERM Estrogen-Like Action	149
5.6	Additional SERMs	150
5.6.1	Clomiphene	150
5.6.2	Toremifene (Fareston [®])	151
5.6.3	Idoxifene	152
5.6.4	Droloxifene	153
5.6.5	Ospemifene	154
5.6.6	GW5638 and GW7604	155
5.6.7	Lasofloxifene	156
5.6.8	Levormeloxifene	157
5.6.9	CHF 4227	158
5.6.10	EM-800 and Acolbifene	159
5.6.11	Arzoxifene	161

6 Progesterone Receptor: Overview of Modern Steroidal Progestins and Developments in the Field of Nonsteroidal Selective Progesterone Receptor Modulators 201

Klaus Schöllkopf and Norbert Schmees

6.1	Introduction	201
6.2	Biology of PR	202
6.2.1	Functional Aspects of PR	202
6.2.2	Test Systems and their Use	203
6.3	Structure of the LBD of PR	205
6.4	Steroidal Progestins	206
6.5	Nonsteroidal Progestins	209
6.5.1	Flutamide Analogs	209
6.5.2	Tetrahydropyridazines	209
6.5.3	Acylanilides	211
6.5.4	Cyclocymopols	211
6.5.5	Tetrahydronaphthofuranones	212
6.5.6	Tanaproget and Related Structures	213
6.5.7	Chromenoquinolines	215

6.5.8	Iminothiazolidines	216
6.5.9	Tetrahydro-1[H]-dibenzo[b,f]pyrido[1,2-d][1,4]oxazepines	217
6.6	Conclusions and Outlook	218
	References	219
7	Progesterone Receptor Antagonists	223

7.1	Introduction	223
7.2	Chemistry	223
7.3	Progesterone Receptor (PR)	225
7.4	Mechanism of Action	226
7.5	Biological Effects of PAs and SPRMs	229
7.5.1	Early Effects	229
7.5.2	Late Effects	229
7.5.3	Differences in Action between PAs and SPRMs	230
7.6	Clinical Applications	231
7.6.1	Short-Term Administration	232
7.6.1.1	Pregnancy Termination	232
7.6.1.2	Other Short-Term Indications	233
7.6.1.3	Emergency Contraception	233
7.6.2	Long-Term Administration	233
7.6.2.1	Treatment of Uterine Myoma	233
7.6.2.2	Treatment of Endometriosis	234
7.6.2.3	Contraceptive Potential	234
7.6.2.4	Reduction of Bleeding in Progestin-Only Contraception	235
7.7	Other Potential Obstetrical and Gynecological Applications	235
7.7.1	Potential Use in <i>In Vitro</i> Fertilization Programs	235
7.7.2	Ovarian and Uterine Carcinoma	236
7.7.3	Dysfunctional Uterine Bleeding	236
7.7.4	Hormone Replacement Therapy in Postmenopausal Women	236
7.8	Nongynecological Applications	236
7.8.1	Tumors	236
7.8.2	Antiglucocorticoid Applications	237
7.8.3	The GeneSwitch [®] (Inovio Biomedical) System for Ligand-Dependent Transgene Expression	237
7.8.4	Future Developments	238
7.9	Side-Effects of Long-Term Administration of PAs and SPRMs	238

9 Novel Glucocorticoid Receptor Ligands 305

Heike Schäcke, Khusru Asadullah, Markus Berger, and Hartmut Rehwinkel

- 9.1 Introduction 305
- 9.2 GR and its Action 307
- 9.2.1 GR and X-ray structures 308
- 9.2.2 Molecular Mechanisms of GR 308
- 9.2.2.1 Transactivation 308
- 9.2.2.2 Transrepression 309
- 9.2.2.3 Cofactors 309
- 9.3 Selective Modulation of GR Activities 310
- 9.4 Dissociated GR Ligands 311
- 9.4.1 Steroidal Structures 311
- 9.4.2 Benzopyrano[3,4-*f*]quinolines 312
- 9.4.3 Methyl Benzoxazinoneamides (MBO-amides) 313
- 9.4.4 Azaindoles 315
- 9.4.5 Tetrahydronaphthalines and Phenyl Indazoles 316
- 9.4.6 Benzo[*f*]indazoles 318
- 9.4.7 Natural Product 319
- 9.5 Conclusions and Perspectives 319
- References 321

10 1,25-Dihydroxyvitamin D₃ and its Dissociated Analogs as Modulators of Vitamin D Receptor Action 325

Ekkehard May, Andreas Steinmeyer, Khusru Asadullah, and Ulrich Zügel

- 10.1 Introduction 325
- 10.2 Principles of Cellular and Molecular Action of Vitamin D 326
- 10.3 Mechanisms of Vitamin D₃-Mediated Immunomodulation 331

10.3.1	Effects of 1,25(OH) ₂ D ₃ on Professional Antigen-Presenting Cells	331
10.3.2	Effects of 1,25(OH) ₂ D ₃ on T Cells, B Cells and Natural Killer Cells	335
10.3.3	Effects of 1,25(OH) ₂ D ₃ on T _{reg} Cells	336
10.3.4	1,25(OH) ₂ D ₃ and the T _h 1/T _h 2 Paradigm	337
10.4	Effects of 1,25(OH) ₂ D ₃ <i>In Vivo</i> and Clinical Implications	338
10.4.1	1,25(OH) ₂ D ₃ in Animal Models of Immune-Mediated Diseases	338
10.4.2	1,25(OH) ₂ D ₃ -Induced Immunomodulation in Man	339
10.5	Dissociated Vitamin D Derivatives	345
10.6	Calcitriol Derivatives with Heterocyclic Units in the Side-Chain	346
10.6.1	Immunomodulatory Properties of Calcitriol Derivative ZK 191784	351
10.7	Conclusions	353
	References	354

11 Peroxisome Proliferator-Activated Receptor γ Modulation for the Treatment of Type 2 Diabetes 367

Alan M. Warshawsky and Anne Reifel Miller

11.1	Introduction	367
11.1.1	The Nuclear Receptor Superfamily Includes Peroxisome Proliferator-Activated Receptors	367
11.1.1.1	Nuclear Receptor Family Members	367
11.1.1.2	Nuclear Receptor Structure	369
11.1.2	PPARs	369
11.1.2.1	PPAR Isotypes	369
11.1.2.2	PPAR Response Elements	371
11.1.2.3	PPAR Cofactors	371
11.1.3	T2D: Prevalence and Pathogenesis	372
11.1.3.1	Prevalence	372
11.1.3.2	Pathogenesis	372
11.2	Currently Marketed PPAR γ Ligands	373
11.2.1	Actos [®] (pioglitazone) and Avandia [®] (rosiglitazone)	373
11.2.1.1	Historical Overview: Identification and Development	373
11.2.1.2	Preclinical and Clinical Findings	374
11.3	Approaches to Improve PPAR γ Activity	375
11.3.1	Structural Considerations	375
11.3.2	Profile Alterations	377
11.3.2.1	PPAR α/γ Dual Agonists	377
11.3.2.2	PPAR γ/δ Dual Agonists	379
11.3.2.3	Selective PPAR γ Modulators and Partial Agonists	379
11.3.2.4	PPAR Pan-Agonists	380
11.3.3	Alternative Approaches	380
11.3.3.1	RXR Modulators	381
11.3.3.2	PPAR γ Antagonists	381
11.4	Discussion and Summary	381
11.5	Future Direction	382
