Fig. 1 Glutaminase II (a) and asparaginase II (b) pathways. Note the central importance of ω -amidase in hydrolyzing the α -keto acids derived from transamination of

both L-glutamine (i.e., α -ketoglutaramate, KGM) and L-asparagine (α -ketosuccinamate, KSM). *Gln Ts* glutamine transaminases, *Asn Ts* asparagine transaminases
