

Ocean Biogeochemical Dynamics

Jorge L. Sarmiento and
Nicolas Gruber

Contents

<i>PREFACE</i>	xi
Chapter 1: Introduction	1
1.1 Chemical Composition of the Ocean	1
1.2 Distribution of Chemicals in the Ocean	7
1.3 Chapter Conclusion and Outline of Book	15
<i>Problems</i>	16
Chapter 2: Tracer Conservation and Ocean Transport	19
2.1 Tracer Conservation Equation	19
Advection and Diffusion Components	19
Application to Box Models	22
2.2 Wind-Driven Circulation	23
Equations of Motion	27
Ekman Transport	28
Gyre Circulation	30
2.3 Wind-Driven Circulation in the Stratified Ocean	33
Basic Concepts	34
<i>Ocean Stratification</i>	34
<i>Geostrophic Equations</i>	37
Gyre Circulation with Stratification	37
<i>Insights from the Potential Vorticity Distribution</i>	38
<i>Insights from Tracers</i>	39
<i>Insights from the Thermal Wind Relationship</i>	42
2.4 Deep Ocean Circulation	46
Observations	46
Models	52
Summary of Deep Ocean Circulation	57
2.5 Time-Varying Flows	59
Mesoscale Variability	60
Interannual to Decadal Variability	61
<i>Tropical Variability</i>	61
<i>Extratropical Variability</i>	66
<i>Problems</i>	69

Chapter 3: Air-Sea Interface	73
3.1 Introduction	73
3.2 Gas Solubilities	75
3.3 Gas Exchange	80
Stagnant Film Model	81
Laboratory Studies	83
Field Studies	86
Gas Transfer Velocity Models	89
3.4 Applications	95
<i>Problems</i>	100
Chapter 4: Organic Matter Production	102
4.1 Introduction	102
Nutrient Supply	105
Light	111
Efficiency of the Biological Pump	111
Outline	114
4.2 Ecosystem Processes	115
Nutrients	115
<i>Composition of Organic Matter</i>	115
<i>Limiting Nutrient</i>	117
<i>Paradigm of Surface Ocean Nitrogen Cycling</i>	117
Phytoplankton	123
<i>Classification of Organisms</i>	123
<i>Phytoplankton Distribution and Productivity</i>	128
<i>Modeling Photosynthesis</i>	131
Zooplankton	135
Bacteria	137
4.3 Analysis of Ecosystem Behavior	138
Role of Light Supply	139
Classical Ecosystem Models	142
<i>N-P Model—Bottom-up Limitation</i>	142
<i>N-P-Z Model—Top-Down Limitation</i>	144
<i>Adding the Microbial Loop</i>	146
Multiple Size Class Ecosystem Models	147
<i>The Model</i>	147
<i>Influence of Micronutrients</i>	149
Applications	150
<i>North Pacific versus North Atlantic</i>	152
<i>Oligotrophic Region</i>	155
4.4 A Synthesis	157
The Regeneration Loop	158
The Export Pathway	158
The Role of Iron	160
Conclusions	162
<i>Problems</i>	168

Chapter 5: Organic Matter Export and Remineralization	173
5.1 Introduction	173
Nutrient and Oxygen Distributions	173
Remineralization Reactions	178
Preformed and Remineralized Components	179
Dissolved and Particulate Organic Matter	180
Outline	181
5.2 Oxygen	181
Separation of Preformed and Remineralized Components	181
Deep Ocean Oxygen Utilization Rates	182
Thermocline Oxygen Utilization Rates	183
5.3 Nitrogen and Phosphorus	186
Stoichiometric Ratios	186
Phosphate	188
The Nitrogen Cycle	189
<i>N* as a Tracer of Denitrification</i>	189
<i>N* as a Tracer of N₂ Fixation</i>	195
<i>The Oceanic Nitrogen Budget</i>	196
Nitrous Oxide	197
5.4 Organic Matter Cycling	200
Particulate Organic Matter	200
Overview	200
Particle Flux	203
The Role of Ballast	206
Particle Remineralization	207
Models of Particle Interactions	209
Dissolved Organic Matter	211
5.5 Models	215
Model Development	215
Sensitivity Studies	217
Applications: Control of Oceanic Oxygen	221
Problems	222
Chapter 6: Remineralization and Burial in the Sediments	227
6.1 Introduction	227
Observations	227
Sediment Properties and Processes	229
Remineralization Reactions	233
6.2 Sediment Diagenesis Models	236
Pore Waters	237
Solids	241
6.3 Remineralization	245
Oxic Sediments	246
Anoxic Sediments	250
Dissolved Organic Carbon	253
6.4 Burial	255
The Substrate	255
The Oxidant	256

Protection by Mineral Adsorption	257
Synthesis	258
6.5 Organic Matter Budget	260
<i>Problems</i>	267
Chapter 7: Silicate Cycle	270
7.1 Introduction	270
Water Column Observations	271
Sediment Observations	271
Outline	278
7.2 Euphotic Zone	278
Diatoms	278
Opal Production and Export	280
7.3 Water Column	285
Opal	286
Silicic Acid	288
7.4 Sediments	295
Opal Dissolution and Burial	295
Opal Chemistry	299
7.5 Conclusion	308
Overview	308
Marine Si Budget	309
Long-Term Homeostasis	311
<i>Problems</i>	313
Chapter 8: Carbon Cycle	318
8.1 Introduction	319
8.2 Inorganic Carbon Chemistry	322
8.3 The Surface Ocean	327
Annual Mean Distribution	327
<i>Physical Processes</i>	328
<i>Biological Processes</i>	331
<i>Vector Diagrams</i>	334
Seasonal Variability	335
<i>Subtropical Gyres</i>	337
<i>North Atlantic</i>	340
<i>North Pacific</i>	341
8.4 Water Column	342
Outline	342
Pump Components	342
The Biological Pumps	345
The Gas Exchange Pump	347
<i>Global Mean</i>	347
<i>Atlantic versus Pacific</i>	349
8.5 Carbon Pumps and Surface Fluxes	352
<i>Problems</i>	355

Chapter 9: Calcium Carbonate Cycle	359
9.1 Introduction	359
9.2 Production	362
Organisms	362
Export Estimates	363
Inorganic-to-Organic Carbon Export Ratio	363
9.3 Water Column Processes	365
CaCO ₃ Solubility	365
Variations in Saturation State	368
Carbonate Ion Distribution	368
Water Column Dissolution	371
9.4 Diagenesis	374
CaCO ₃ Dissolution in Sediments	374
Modeling CaCO ₃ Diagenesis	379
Model Applications	379
Concluding Remarks	384
9.5 Calcium Carbonate Compensation	384
CaCO ₃ Homeostat	384
CaCO ₃ Compensation	386
<i>Problems</i>	389
Chapter 10: Carbon Cycle, CO₂, and Climate	392
10.1 Introduction	392
Greenhouse Effect	394
Global Warming	396
Outline	398
10.2 The Anthropogenic Perturbation	399
Capacity Constraints	400
<i>Buffering by Dissolved Carbonate</i>	400
<i>Buffering by Sediment CaCO₃</i>	401
<i>Buffering by Weathering</i>	402
Kinetic Constraints	402
<i>Atmospheric Pulse Response</i>	402
<i>Ocean Uptake and Buffering with Dissolved Carbonate</i>	403
<i>Buffering by Sediment CaCO₃</i>	405
Anthropogenic CO ₂ Uptake	405
<i>Direct Estimation</i>	406
<i>Reconstruction of Anthropogenic CO₂ Inventory</i>	408
<i>The Atmospheric Oxygen Method</i>	413
The Role of Biology	414
Future CO ₂ Uptake	415
10.3 Interannual to Decadal Timescale Variability	417
Tropical Variability	419
Extratropical Variability	423
10.4 Glacial-Interglacial Atmospheric CO ₂ Changes	429
Setting the Scene	431
<i>Terrestrial Biosphere Carbon Loss</i>	431
<i>Salinity Changes</i>	432
<i>Temperature Changes</i>	434

Contents

Fundamental Mechanisms	435
<i>Southern Ocean Dominance</i>	435
<i>Equilibration of Low-Latitude Changes</i>	436
Closing the Southern Ocean Window	440
<i>Physical Mechanisms</i>	442
<i>Biological Mechanisms</i>	443
<i>Observational Constraints</i>	444
A Role for the Regions outside the Southern Ocean?	446
<i>Circulation Scenarios</i>	447
<i>Soft-Tissue Pump Scenarios</i>	447
<i>Alkalinity and Carbonate Pump Scenarios</i>	449
A Synthesis Scenario	452
<i>Problems</i>	454
APPENDIX	459
REFERENCES	461
INDEX	495
