*Ochicanthon vazdemelloi* Latha & Sabu 2011, a wingless new species of dung beetle, was described from the tropical montane cloud forests in the Western Ghats, India (Latha *et al.* 2011). Authors named the species after Fernando Z. Vaz-de-Mello (Universidade Federal de Mato Grosso, Cuiaba, Brazil). However, we discovered after publication that this species name was a primary junior homonym of another *Ochicanthon* species from Sumatra: *Ochicanthon vazdemelloi* Ochi, Kon & Hartini, 2009 (Ochi *et al.* 2009). Hence, *Ochicanthon fernandoi* Sabu & Latha, **new name** is here proposed as a replacement name for *Ochicanthon vazdemelloi* Latha & Sabu 2011.

#### **Acknowledgements**

We acknowledge Mr. P. Schoolmeesters (Belgium) for bringing this homonym to our attention and for his support with literature.
