Preface	xi
1 Introduction	1
1.1 OFDM-based wireless network overview	1
1.1.1 Digital broadcasting and DVB-T	2
1.1.2 Wireless LAN and IEEE 802.11	3
1.1.3 WiMAX and IEEE 802.16	5
1.2 The need for “cross-layer” design	6
1.3 Organization of this text	9
Bibliography	11
2 OFDM Fundamentals	13
2.1 Broadband radio channel characteristics	13
2.1.1 Envelope fading	14
2.1.2 Time dispersive channel	15
2.1.3 Frequency dispersive channel	16
2.1.4 Statistical characteristics of broadband channels	17
2.2 Canonical form of broadband transmission	19
2.3 OFDM realization	24
2.4 Summary	28
Bibliography	29
3 PHY Layer Issues — System Imperfections	31
3.1 Frequency synchronization	31
3.1.1 OFDM carrier offset data model	32
3.1.2 Pilot-based estimation	33
3.1.3 Non-pilot based estimation	34
3.2 Channel estimation	38
3.2.1 Pilots for 2D OFDM channel estimation	38
3.2.2 2D MMSE channel estimation	40
3.2.3 Reduced complexity channel estimation	42
3.3 I/Q imbalance compensation	46
3.3.1 I/Q imbalance model	47
3.3.2 Digital compensation receiver	48

3.3.3	Frequency offset estimation with I/Q imbalance	50
3.4	Phase noise compensation	55
3.4.1	Mathematical models for phase noise	57
3.4.2	CPE estimation with channel state information	59
3.4.3	Time domain channel estimation in the presence of CPE	61
3.4.4	CPE estimation without explicit CSI	61
3.5	Summary	63
	Bibliography	63
4	PHY Layer Issues – Spatial Processing	67
4.1	Antenna array fundamentals	67
4.2	Beamforming	70
4.2.1	Coherent combining	70
4.2.2	Zero-forcing	71
4.2.3	MMSE reception (optimum linear receiver)	71
4.2.4	SDMA	73
4.2.5	Broadband beamforming	74
4.3	MIMO channels and capacity	75
4.4	Space-time coding	80
4.4.1	Spatial multiplexing	80
4.4.2	Orthogonal space-time block coding	81
4.4.3	Concatenated ST transmitter	82
4.4.4	Beamforming with ST coding	83
4.4.5	ST beamforming in OFDM	85
4.5	Wide-area MIMO beamforming	85
4.5.1	Data model	85
4.5.2	Uncoded OFDM design criterion	87
4.5.3	Coded OFDM design criterion	90
4.6	Summary	93
	Appendix I: derivation of \bar{P}_e	97
	Appendix II: proof of proposition 5	97
	Appendix III: proof of proposition 6	97
	Bibliography	97
5	Multiple Access Control Protocols	100
5.1	Introduction	100
5.2	Basic MAC protocols	100
5.2.1	Contention based protocols	100
5.2.2	Non-contention based MAC protocols	102
5.3	OFDMA advantages	106
5.4	Multiuser diversity	109
5.5	OFDMA optimality	116
5.5.1	Multiuser multicarrier SISO systems	117
5.5.2	Multiuser multicarrier MIMO systems	124
5.6	Summary	133
	Appendix I: $C_n(\mathbf{p})$ is a convex function	134

Appendix II: $C(\mathbf{p})$ is a convex functiony	134
Bibliography	134
6 OFDMA Design Considerations	138
6.1 Cross-layer design introduction	138
6.2 Mobility-dependent traffic channels	140
6.2.1 OFDMA traffic channel	140
6.2.2 System model	141
6.2.3 Channel configuration for fixed applications	143
6.2.4 Channel configuration for mobile applications	154
6.3 IEEE 802.16e traffic channels	159
6.4 Summary	163
Bibliography	163
7 Multi-Cell Frequency Planning	166
7.1 Introduction	166
7.1.1 Fixed channel allocation	167
7.1.2 Dynamic channel allocation	169
7.2 OFDMA DCA	170
7.2.1 Protocol design	171
7.2.2 Problem formulation for the RNC	174
7.2.3 Problem formulation for the BSs	176
7.2.4 Fast algorithm for the RNC	177
7.2.5 Fast algorithm for BSs	179
7.3 Spectrum Efficiency	180
7.3.1 System configuration and signaling overhead	181
7.3.2 Channel loading gains	184
7.4 Summary	186
Bibliography	188
8 Appendix	191
8.1 IEEE 802.11 and WiFi	191
8.1.1 802.11 overview	191
8.1.2 802.11 network architecture	193
8.1.3 MAC layer technologies	196
8.1.4 Physical layer technologies	205
8.2 IEEE 802.16e and Mobile WiMAX	212
8.2.1 Overview	214
8.2.2 Physical layer technologies	214
8.2.3 MAC layer technologies	227
8.3 Performance analysis of WiMAX systems	233
8.3.1 WiMAX OFDMA-TDD	233
8.3.2 Comparison method	234
Bibliography	239
Notations, Acronyms and Commonly Used Symbols	242
