Physical Constants xiii

Preface xv

1 Light and Vision—A Historical Perspective 1

Introduction 1

1-1 Brief History of Vision 2

1-2 History of Spectacles 4

1-3 History of the Physics of Light 6

Problems 10

References 11

2 Production and Measurement of Light 12

Introduction 12

2-1 Electromagnetic Spectrum 12

2-2 Radiometry 14

2-3 Photometry 18

2-4 Comparing Luminous Intensities: The Photometer 21

2-5	Blackbody Radiation	22
2-6	Sources of Optical Radiation	25
2-7	Detectors of Radiation	31
	Problems	35
	References	36

3 Geometrical Optics 38

	Introduction	38
3-1	Huygens' Principle	40
3-2	Fermat's Principle	42
3-3	Principle of Reversibility	43
3-4	Reflection in Plane Mirrors	43
3-5	Refraction through Plane Surfaces	45
3-6	Imaging by an Optical System	47
3-7	Reflection at a Spherical Surface	50
3-8	Curvatures and Vergences	55
3-9	Refraction through Spherical Surfaces	57
3-10	Vergences in Refraction	60
3-11	Thin Lenses	62
3-12	Vergences for Thin Lenses	66
3-13	Thin Lenses in Contact	67
3-14	Newtonian Equation for the Thin Lens	68
	Problems	70
	References	73

4 The Thick Lens 74

	Introduction	74
4-1	The Thick Lens	75
4-2	Ray Tracing	82
	Problems	86
	References	87

5 Vergence and Vision 88

	Introduction	88
5-1	Focusing by the Eye	88
5-2	Focusing by Emmetropic and Ametropic Eyes	89
5-3	Effective Power	92
5-4	Accommodation	95
	Problems	100
	References	101

6 Cylindrical Lenses and Astigmatism 102

	Introduction	102
6-1	Cylindrical Lenses	103
6-2	Power Cross	108
6-3	Combining Cylindrical Powers	109
6-4	Toric Surfaces	113
6-5	Ocular Astigmatism	116

6-6	Oblique Astigmatism	119
	Problems	120
	References	121
7	Aberration Theory	122
	Introduction	122
7-1	Ray and Wave Aberrations	123
7-2	Spherical Aberration	124
7-3	Coma	126
7-4	Astigmatism and Curvature of Field	129
7-5	Distortion	132
7-6	Chromatic Aberration	134
7-7	Aberrations in Vision	138
	Problems	140
	References	141
8	Controlling Light through Optical Systems	142
	Introduction	142
8-1	Definition of Terms	143
8-2	Controlling Image Brightness: Aperture Stops and Pupils	144
8-3	Controlling Field of View: Field Stops and Windows	148
8-4	A Comprehensive Illustrative Example	151
	Problems	154
	References	156
9	Optical Instrumentation	157
	Introduction	157
9-1	Prisms	157
9-2	The Camera	168
9-3	Simple Magnifiers and Eyepieces	173
9-4	Microscopes	178
9-5	Telescopes	183
	Problems	189
	References	192
10	Optics of the Eye	194
	Introduction	194
10-1	Biological Structures of the Eye	195
10-2	Functions of the Eye	197
10-3	Optical Models of the Eye	200
10-4	Errors of Refraction and Their Correction	207
10-5	Common Ophthalmic Instruments	213
	Problems	221
	References	222
11	Light as Waves	224
	Introduction	224
11-1	Harmonic Waves	225

11-2	Electromagnetic Waves	227
11-3	Doppler Effect	230
11-4	Superposition Principle	232
11-5	Superposition of Waves of the Same Frequency	233
11-6	Standing Waves	235
11-7	Wave Coherence	237
	Problems	238
	References	240

12 Lasers and the Eye 241

	Introduction	241
12-1	Basic Physics of Laser Action	242
12-2	Essential Elements of a Laser	246
12-3	Simplified Description of Laser Operation	248
12-4	Characteristics of Laser Light	252
12-5	Laser Types and Applications	263
12-6	Laser Therapy for Ocular Defects	267
	Problems	273
	References	275

13 Interference Phenomena 277

	Introduction	277
13-1	Two-Beam Interference	278
13-2	Young's Double Slit Experiment	282
13-3	Double Slit Interference with Virtual Sources	286
13-4	Interference in Dielectric Films	288
13-5	Fringes of Equal Thickness	292
	Problems	294
	References	295

14 Interference Applications 296

	Introduction	296
14-1	Newton's Rings	296
14-2	Film Thickness Measurement by Interference	299
14-3	The Michelson Interferometer	301
14-4	Holography	305
	Problems	307
	References	310

15 Polarized Light 311

	Introduction	311
15-1	Modes of Polarization	312
15-2	Polarizing Elements	314
15-3	Dichroism: Polarization by Selective Absorption	316
15-4	Polarization by Reflection from Dielectric Surfaces	319
15-5	Polarization by Scattering	322
15-6	Birefringence: Polarization with Two Refractive Indices	324
15-7	Double Refraction	328

15-8 Optical Activity 330

15-9 Photoelasticity 331

Problems 333

References 336

16 Fraunhofer Diffraction 337

Introduction 337

16-1 Diffraction from a Single Slit 339

16-2 Rectangular and Circular Apertures 346

16-3 Resolution 348

16-4 Multiple Slit Diffraction 352

Problems 360

References 362

17 Fiber Optics 363

Introduction 363

17-1 Optics of Propagation 364

17-2 Attenuation 368

17-3 Distortion 369

17-4 Sources and Detectors 373

17-5 Applications 374

Problems 377

References 378

Answers to Selected Problems 380
