## Part One FOUNDATIONS

### Chapter I. Analytical Foundations

I.1	Sets, Functions, Sequences	5
I.2	Topology	10
I.3	Topological Vector Spaces	26
I.4	Measures, Measurable Functions, and Integrals	49
I.4.A	Measures	49
I.4.B	Measurable Functions	65
I.4.C	Integrals of Simple and Nonnegative Functions	72
I.4.D	Bochner Integrals	78
I.4.E	The Lebesgue and Radon–Nikodym Theorems	85
I.4.F	Absolutely Continuous Functions on an Interval	91
I.4.G	Product Measures	99
I.5	The Banach Spaces $C(S, \mathcal{X})$ and $L^p(S, \Sigma, \mu, \mathcal{X})$	107
I.5.A	The Metric Space $C(S, X)$ and the Banach Space $C(S, \mathcal{X})$	107
I.5.B	The Space $L^p(S, \Sigma, \mu, \mathcal{X})$	122
I.5.C	Special Spaces	131
I.6	Convex Sets	137
I.7	Measurable Set-Valued Mappings	146
	Notes	154

**Chapter II. Functional Equations**

II.1	Definitions and Background	156
II.2	Brouwer's, Schauder's, and Tychonoff's Fixed Point Theorems	161
II.3	Derivatives and the Implicit Function Theorem	167
II.4	Ordinary Differential Equations	183
II.4.A	Existence of Local Solutions	184
II.4.B	Extension of Local Solutions and Uniqueness	186
II.4.C	Linear Ordinary Differential Equations	191
II.4.D	Dependence on Parameters of Solutions of Ordinary Differential Equations	195
II.5	Functional-Integral Equations in $C(T, \mathbb{R}^n)$	200
II.5.A	Existence of Solutions of Functional-Integral Equations in $C(T, \mathbb{R}^n)$	200
II.5.B	Local Solutions and Unique Solutions of Hereditary Functional-Integral Equations	203
II.5.C	Linear Functional-Integral Equations in $C(T, \mathbb{R}^n)$	207
II.5.D	Dependence on Parameters of Solutions of Functional-Integral Equations in $C(T, \mathbb{R}^n)$	210
II.5.E	Integral Equations with Pseudodelays in $C(T, \mathbb{R}^n)$	216
II.6	Functional-Integral Equations in $L^p(T, \mathbb{R}^n)$	217
II.6.A	Existence of Solutions	217
II.6.B	Linear Functional-Integral Equations in $L^p(T, \mathbb{R}^n)$	222
II.6.C	Dependence on Parameters of Solutions of Functional-Integral Equations in $L^p(T, \mathbb{R}^n)$	226
II.6.D	Integral Equations with Pseudodelays in $L^p(T, \mathbb{R}^n)$	233
	Notes	235

**Part Two OPTIMAL CONTROL****Chapter III. Basic Problems and Concepts, and Heuristic Considerations**

III.1	The Subject of the Optimal Control Theory	239
III.2	Original, Approximate, and Relaxed Solutions	244
III.3	Measure-Valued Control Functions	249
III.3.A	"Limits" of Rapidly Oscillating Functions	249
III.3.B	Relaxed Controls as Linear Functionals	253
III.4	Necessary Conditions for a Minimum	255
III.5	Minimizing Original Solutions	258

**Chapter IV. Original and Relaxed Control Functions**

IV.0	Summary	263
IV.1	The Spaces $C(R)$ and $L^1(T, C(R))$ and Their Conjugate Spaces	264
IV.2	The Sets $\mathcal{R}$ and $\mathcal{S}$	272
IV.3	The Sets $\mathcal{R}^*$ and $\mathcal{S}^*$ and Abundant Sets	279
	Notes	293

**Chapter V. Control Problems Defined by Equations in Banach Spaces**

V.0	Formulation of the Optimal Control Problem	294
V.1	Existence of Minimizing Relaxed and Approximate Solutions	296
V.2	Necessary Conditions for a Relaxed Minimum	298
V.3	Necessary Conditions for an Original Minimum	308
V.4	Convex Cost Functionals	316
V.5	Weak Necessary Conditions for an Original Minimum	321
V.6	An Illustration—A Class of Ordinary Differential Problems and Examples	323
V.7	State-Dependent Controls	339
	Notes	343

**Chapter VI. Optimal Control of Ordinary Differential Equations**

VI.0	Formulation of the "Standard" Problem	346
VI.1	Existence of Minimizing Relaxed and Approximate Solutions	348
VI.2	Necessary Conditions for a Minimum	352
VI.3	Contingent Equations and Equivalent Control Functions	369
VI.4	Unbounded Contingent Sets and Compactified Parametric Problems	372
VI.5	Variable Initial Conditions, Free Time, Infinite Time, Staging, Advance-Delay Differential Problems	396
	Notes	406

**Chapter VII. Optimal Control of Functional-Integral Equations  
in  $C(T, \mathbb{R}^n)$** 

VII.0	Formulation of the Problem	407
VII.1	Existence of Minimizing Solutions	408
VII.2	Necessary Conditions for a Relaxed Minimum	413
VII.3	Necessary Conditions for a Relaxed Minimum in Unilateral and Related Problems	419
VII.4	Necessary Conditions for an Original Minimum	425
VII.5	Problems with Pseudodelays	426
	Notes	427

**Chapter VIII. Optimal Control of Functional-Integral Equations  
in  $L^p(T, \mathbb{R}^n)$** 

VIII.0	Formulation of the Problem	428
VIII.1	Existence of Minimizing Solutions	429
VIII.2	Necessary Conditions for a Relaxed Minimum	433
VIII.3	Necessary Conditions for an Original Minimum	439
VIII.4	Problems with Pseudodelays	441
	Notes	441

**Chapter IX. Conflicting Control Problems with Relaxed Adverse Controls**

IX.0	Formulation of the Problem	443
IX.1	Existence and Necessary Conditions for Optimal Controls	445
IX.2	Conflicting Control Problems Defined by Functional Equations. Additively Coupled Conflicting Controls. A Counterexample	451
IX.3	An Evasion Problem	459
IX.4	Zero-Sum Games with Control Strategies	472
	Notes	477

**Chapter X. Conflicting Control Problems with Hyperrelaxed Adverse Controls**

X.0	Formulation of the Problem	478
X.1	Existence of Minimizing Relaxed and Approximate Controls	482
X.2	Necessary Conditions for a Relaxed Minimum	495
X.3	Hyperrelaxed and Relaxed Adverse Controls in Ordinary Differential Equations	500
	Notes	516
