*Optimal Control Theory  
for Infinite Dimensional Systems*

Birkhäuser  
Boston • Basel • Berlin

# Contents

<b>Preface</b> .....	<b>ix</b>
<b>Chapter 1. Control Problems in Infinite Dimensions</b> .....	<b>1</b>
§1. Diffusion Problems .....	1
§2. Vibration Problems .....	5
§3. Population Dynamics .....	8
§4. Fluid Dynamics .....	12
§5. Free Boundary Problems .....	15
Remarks .....	22
<b>Chapter 2. Mathematical Preliminaries</b> .....	<b>24</b>
§1. Elements in Functional Analysis .....	24
§1.1. Spaces .....	24
§1.2. Linear operators .....	27
§1.3. Linear functionals and dual spaces .....	28
§1.4. Adjoint operators .....	31
§1.5. Spectral theory .....	32
§1.6. Compact operators .....	33
§2. Some Geometric Aspects of Banach Spaces .....	36
§2.1. Convex sets .....	36
§2.2. Convexity of Banach spaces .....	41
§3. Banach Space Valued Functions .....	45
§3.1. Measurability and integrability .....	45
§3.2. Continuity and differentiability .....	47
§4. Theory of $C_0$ Semigroups .....	49
§4.1. Unbounded operators .....	49
§4.2. $C_0$ semigroups .....	52
§4.3. Special types of $C_0$ semigroups .....	55
§4.4. Examples .....	57
§5. Evolution Equations .....	63
§5.1. Solutions .....	63
§5.2. Semilinear equations .....	66
§5.3. Variation of constants formula .....	68
§6. Elliptic Partial Differential Equations .....	71
§6.1. Sobolev spaces .....	71
§6.2. Linear elliptic equations .....	75
§6.3. Semilinear elliptic equations .....	78
Remarks .....	80
<b>Chapter 3. Existence Theory of Optimal Controls</b> .....	<b>81</b>
§1. Souslin Space .....	81

§1.1. Polish space .....	81
§1.2. Souslin space .....	84
§1.3. Capacity and capacitability .....	86
§2. Multifunctions and Selection Theorems .....	89
§2.1. Continuity .....	89
§2.2. Measurability .....	94
§2.3. Measurable selection theorems .....	100
§3. Evolution Systems with Compact Semigroups .....	109
§4. Existence of Feasible Pairs and Optimal Pairs .....	106
§4.1. Cesari property .....	106
§4.2. Existence theorems .....	110
§5. Second Order Evolution Systems .....	113
§5.1. Formulation of the problem .....	113
§5.2. Existence of optimal controls .....	118
§6. Elliptic Partial Differential Equations and Variational Inequalities .....	121
Remarks .....	129
<b>Chapter 4. Necessary Conditions for Optimal Controls</b>	
— Abstract Evolution Equations .....	<b>130</b>
§1. Formulation of the Problem .....	130
§2. Ekeland Variational Principle .....	135
§3. Other Preliminary Results .....	137
§3.1. Finite codimensionality .....	137
§3.2. Preliminaries for spike perturbation .....	143
§3.3. The distance function .....	146
§4. Proof of the Maximum Principle .....	150
§5. Applications .....	159
Remarks .....	165
<b>Chapter 5. Necessary Conditions for Optimal Controls</b>	
— Elliptic Partial Differential Equations .....	<b>168</b>
§1. Semilinear Elliptic Equations .....	168
§1.1. Optimal control problem and the maximum principle .....	168
§1.2. The state constraints .....	171
§2. Variation along Feasible Pairs .....	175
§3. Proof of the Maximum Principle .....	179
§4. Variational Inequalities .....	183
§4.1. Stability of the optimal cost .....	184
§4.2. Approximate control problems .....	185
§4.3. Maximum principle and its proof .....	188
§5. Quasilinear Equations .....	191
§5.1. The state equation and the optimal control problem .....	191

- §5.2. The maximum principle ..... 196
- §6. Minimax Control Problem ..... 197
  - §6.1. Statement of the problem ..... 197
  - §6.2. Regularization of the cost functional ..... 199
  - §6.3. Necessary conditions for optimal controls ..... 200
- §7. Boundary Control Problems ..... 207
  - §7.1. Formulation of the problem ..... 207
  - §7.2. Strong stability and the qualified maximum principle ..... 209
  - §7.3. Neumann problem with measure data ..... 212
  - §7.4. Exact penalization and a proof of  
the maximum principle ..... 214
- Remarks ..... 220

**Chapter 6. Dynamic Programming Method for Evolution Systems ..... 223**

- §1. Optimality Principle and Hamilton-Jacobi-Bellman Equations ..... 223
- §2. Properties of the Value Functions ..... 227
  - §2.1. Continuity ..... 228
  - §2.2.  $B$ -continuity ..... 231
  - §2.3. Semi-concavity ..... 234
- §3. Viscosity Solutions ..... 239
- §4. Uniqueness of Viscosity Solutions ..... 244
  - §4.1. A perturbed optimization lemma ..... 244
  - §4.2. The Hilbert space  $X_\alpha$  ..... 248
  - §4.3. A uniqueness theorem ..... 250
- §5. Relation to Maximum Principle and Optimal Synthesis ..... 256
- §6. Infinite Horizon Problems ..... 264
- Remarks ..... 272

**Chapter 7. Controllability and Time Optimal Control ..... 274**

- §1. Definitions of Controllability ..... 274
- §2. Controllability for linear systems ..... 278
  - §2.1. Approximate controllability ..... 279
  - §2.2. Exact controllability ..... 282
- §3. Approximate controllability for semilinear systems ..... 286
- §4. Time Optimal Control — Semilinear Systems ..... 294
  - §4.1. Necessary conditions for time optimal pairs ..... 294
  - §4.2. The minimum time function ..... 299
- §5. Time Optimal Control — Linear Systems ..... 302
  - §5.1. Convexity of the reachable set ..... 303
  - §5.2. Encounter of moving sets ..... 308
  - §5.3. Time optimal control ..... 315
- Remarks ..... 317

<b>Chapter 8. Optimal Switching and Impulse Controls</b> .....	<b>319</b>
§1. Switching and Impulse Controls .....	319
§2. Preliminary Results .....	322
§3. Properties of the Value Function .....	328
§4. Optimality Principle and the HJB Equation .....	331
§5. Construction of an Optimal Control .....	334
§6. Approximation of the Control Problem .....	338
§7. Viscosity Solutions .....	344
§8. Problem in Finite Horizon .....	352
Remarks .....	359
<b>Chapter 9. Linear Quadratic Optimal Control Problems</b> .....	<b>361</b>
§1. Formulation of the Problem .....	361
§1.1. Examples of unbounded control problems .....	361
§1.2. The LQ problem .....	366
§2. Well-posedness and Solvability .....	371
§3. State Feedback Control .....	379
§3.1. Two-point boundary value problem .....	379
§3.2. The Problem $(LQ)_t$ .....	382
§3.3. A Fredholm integral equation .....	386
§3.4. State feedback representation of optimal controls .....	391
§4. Riccati Integral Equation .....	395
§5. Problem in Infinite Horizon .....	401
§5.1. Reduction of the problem .....	401
§5.2. Well-posedness and solvability .....	405
§5.3. Algebraic Riccati equation .....	407
§5.4. The positive real lemma .....	408
§5.5. Feedback stabilization .....	412
§5.6. Fredholm integral equation and Riccati integral equation .....	414
Remarks .....	415
<b>References</b> .....	<b>419</b>
<b>Index</b> .....	<b>443</b>
