Contents

Preface	ix
Acknowledgments	xi
Chapter 1. Synopsis	1
1.1 Introduction	1
1.2 Classical Optimization Techniques	2
1.3 Optimization and Inequalities	3
1.4 Numerical Methods of Optimization	3
1.5 Linear Programming Techniques	4
1.6 Nonlinear Programming Techniques	5
1.7 Dynamic Programming Methods	6
1.8 Variational Methods	7
1.9 Stochastic Approximation Procedures	8
1.10 Optimization in Simulation	9
1.11 Optimization in Function Spaces	10
Chapter 2. Classical Optimization Techniques	11
2.1 Introduction	11
2.2 Preliminaries	12
2.3 Necessary and Sufficient Conditions for an Extremum	14

2.4	Constrained Optimization—Lagrange Multipliers	25
2.5	Statistical Applications	32
2.6	Exercises	39
Chapter 3. Optimization and Inequalities		41
3.1	Introduction	41
3.2	Classical Inequalities	42
3.3	Matrix Inequalities	46
3.4	Applications	47
Chapter 4. Numerical Methods of Optimization		53
4.1	Introduction	53
4.2	Numerical Evaluation of Roots of Equations	55
4.3	Direct Search Methods	64
4.4	Gradient Methods	71
4.5	Convergence of Numerical Procedures	75
4.6	Nonlinear Regression and Other Statistical Algorithms	79
4.7	Exercises	87
Chapter 5. Linear Programming Techniques		89
5.1	Introduction	89
5.2	Linear Programming Problem	91
5.3	Standard Form of the Linear Programming Problem	102
5.4	Simplex Method	105
5.5	Karmarkar's Algorithm	110
5.6	Zero-Sum Two-Person Finite Games and Linear Programming	112
5.7	Integer Programming	118
5.8	Statistical Applications	122
5.9	Exercises	129
Chapter 6. Nonlinear Programming Methods		131
6.1	Introduction	131
6.2	Statistical Examples	132
6.3	Kuhn–Tucker Conditions	135
6.4	Quadratic Programming	142
6.5	Convex Programming	146
6.6	Applications	148

6.7	Statistical Control of Optimization	155
6.8	Stochastic Programming	159
6.9	Geometric Programming	162
6.10	Exercises	168
Chapter 7.	Dynamic Programming Methods	171
7.1	Introduction	171
7.2	Regulation and Control	172
7.3	Functional Equation and Principles of Optimality	177
7.4	Dynamic Programming and Approximation	191
7.5	Patient Care through Dynamic Programming	194
7.6	Pontryagin Maximum Principle	195
7.7	Miscellaneous Applications	201
7.8	Exercises	204
Chapter 8.	Variational Methods	209
8.1	Introduction	209
8.2	Statistical Applications	210
8.3	Euler–Lagrange Equations	215
8.4	Neyman–Pearson Technique	221
8.5	Robust Statistics and Variational Methods	234
8.6	Penalized Maximum Likelihood Estimates	240
8.7	Exercises	242
Chapter 9.	Stochastic Approximation Procedures	247
9.1	Introduction	247
9.2	Robbins–Monro Procedure	250
9.3	General Case	255
9.4	Kiefer–Wolfowitz Procedure	259
9.5	Applications	262
9.6	Stochastic Approximation and Filtering	264
9.7	Exercises	267
Chapter 10.	Optimization in Simulation	269
10.1	Introduction	269
10.2	Optimization Criteria	270
10.3	Optimality of Regression Experiments	273

10.4	Response Surface Methods	285
10.5	Miscellaneous Stochastic Methods	289
10.6	Application	295
Chapter 11. Optimization in Function Spaces		297
11.1	Introduction	197
11.2	Preliminaries	298
11.3	Optimization Results	309
11.4	Splines in Statistics	320
11.5	Exercises	323
