Features:

Basic:	gato ∧ cat
Edit-Distance:	edit(gato,cat) = 2
Dictionary:	(gato,cat) ∈ Dict
Stem:	gato ∧ +stem(cat)
Prefix:	gato ∧ +ca

Data:

Train 10K sentences of FBIS Chinese-English newswire

Test NIST 2002 Chinese-English dev set

Word Segmentation Results

[T h e][g r e e n][c a t]

Word Segmentation Results

[T h e][g r e e n][c a t]

Key distribution: $P(\text{running})$

Word Segmentation Results

[T h e][g r e e n][c a t]

Key distribution: $P(\text{running})$

Features:

Basic:	running
Length:	length(running) = 7
Num-Vowels:	numV(running) = 2
Coarse-Phono-Prefix:	+rAn
Coarse-Phono-Suffix:	+IN

Word Segmentation Results

[T h e][g r e e n][c a t]

Token F1

Features:

Basic:	running
Length:	length(running) = 7
Num-Vowels:	numV(running) = 2
Coarse-Phono-Prefix:	+rAn
Coarse-Phono-Suffix:	+IN

Data:

Train and test on phonetic version of Bernstein-Ratner corpus

Word Segmentation Results

[T h e][g r e e n][c a t]

Features:

Basic:	running
Length:	length(running) = 7
Num-Vowels:	numV(running) = 2
Coarse-Phono-Prefix:	+rAn
Coarse-Phono-Suffix:	+IN

Apply to New Models

1. Take a generative model

Apply to New Models

1. Take a generative model

2. Brainstorm features local to the component multinomials

Apply to New Models

1. Take a generative model
2. Brainstorm features local to the component multinomials
3. Run this algorithm

Apply to New Models

1. Take a generative model
2. Brainstorm features local to the component multinomials
3. Run this algorithm
4. Crush your baseline

Conclusion

- State-of-the-art results

Conclusion

- State-of-the-art results
- Can implemented using off-the-shelf NLP tools

Conclusion

- State-of-the-art results
- Can implemented using off-the-shelf NLP tools
- Directly optimizing data-likelihood can outperform EM

Conclusion

- State-of-the-art results
- Can implemented using off-the-shelf NLP tools
- Directly optimizing data-likelihood can outperform EM
- Works on a wide range of induction tasks

Conclusion

Thanks!
