Partial Differential Equations

With 10 Illustrations

Springer

Contents

Preface v

Introduction: What Are Partial Differential Equations? 1

1. The Laplace Equation as the Prototype of an Elliptic Partial Differential Equation of Second Order 7
1.1 Harmonic Functions. Representation Formula for the Solution of the Dirichlet Problem on the Ball (Existence Techniques 0) 7
1.2 Mean Value Properties of Harmonic Functions. Subharmonic Functions. The Maximum Principle 15

2. The Maximum Principle 31
2.1 The Maximum Principle of E. Hopf 31
2.2 The Maximum Principle of Alexandrov and Bakelman 37
2.3 Maximum Principles for Nonlinear Differential Equations 42

3. Existence Techniques I: Methods Based on the Maximum Principle 51
3.1 Difference Methods: Discretization of Differential Equations .. 51
3.2 The Perron Method 60
3.3 The Alternating Method of H.A. Schwarz 64
3.4 Boundary Regularity 69

4. Existence Techniques II: Parabolic Methods. The Heat Equation 77
4.1 The Heat Equation: Definition and Maximum Principles 77
4.2 The Fundamental Solution of the Heat Equation. The Heat Equation and the Laplace Equation 87
4.3 The Initial Boundary Value Problem for the Heat Equation .. 94
4.4 Discrete Methods 108

5. The Wave Equation and Its Connections with the Laplace and Heat Equations 113
5.1 The One-Dimensional Wave Equation 113

5.2 The Mean Value Method: Solving the Wave Equation Through the Darboux Equation 117
5.3 The Energy Inequality and the Relation with the Heat Equation 121

6. The Heat Equation, Semigroups, and Brownian Motion ... 127
6.1 Semigroups 127
6.2 Infinitesimal Generators of Semigroups 129
6.3 Brownian Motion 145

7. The Dirichlet Principle. Variational Methods for the Solution of PDEs (Existence Techniques III) 157
7.1 Dirichlet's Principle 157
7.2 The Sobolev Space $W^{1,2}$ 160
7.3 Weak Solutions of the Poisson Equation 170
7.4 Quadratic Variational Problems 172
7.5 Abstract Hilbert Space Formulation of the Variational Problem. The Finite Element Method 175
7.6 Convex Variational Problems 183

8. Sobolev Spaces and L^2 Regularity Theory 193
8.1 General Sobolev Spaces. Embedding Theorems of Sobolev, Morrey, and John–Nirenberg 193
8.2 L^2-Regularity Theory: Interior Regularity of Weak Solutions of the Poisson Equation 208
8.3 Boundary Regularity and Regularity Results for Solutions of General Linear Elliptic Equations 215
8.4 Extensions of Sobolev Functions and Natural Boundary Conditions 223
8.5 Eigenvalues of Elliptic Operators 229

9. Strong Solutions 243
9.1 The Regularity Theory for Strong Solutions 243
9.2 A Survey of the L^p-Regularity Theory and Applications to Solutions of Semilinear Elliptic Equations 248

10. The Regularity Theory of Schauder and the Continuity Method (Existence Techniques IV) 255
10.1 C^α-Regularity Theory for the Poisson Equation 255
10.2 The Schauder Estimates 263
10.3 Existence Techniques IV: The Continuity Method 269

11. The Moser Iteration Method and the Regularity Theorem of de Giorgi and Nash 275
11.1 The Moser–Harnack Inequality 275

11.2 Properties of Solutions of Elliptic Equations 287
11.3 Regularity of Minimizers of Variational Problems 291

Appendix. Banach and Hilbert Spaces. The L^p-Spaces 309
