

PARTIALLY ORDERED ALGEBRAIC SYSTEMS

L. FUCHS

*Professor of Mathematics
L. Eötvös University
Budapest*

PERGAMON PRESS

OXFORD • LONDON • NEW YORK • PARIS

1963

TABLE OF CONTENTS

<i>Preface</i>	vii
<i>Table of notations</i>	ix

CHAPTER I. *Introduction*

1. Partially ordered sets	1
2. Partial order in algebraic systems	4

FIRST PART

PARTIALLY ORDERED GROUPS

CHAPTER II. *Preliminaries on partially ordered groups*

1. Definitions	9
2. The positive cone	12
3. Examples	16
4. Subgroups and factor groups	18
5. o -homomorphisms	20
6. Direct products	22
7. Lexicographic products	25
8. Intrinsic topologies	28

CHAPTER III. *Extensions of partial orders in groups*

1. Extension to a full order	34
2. O -groups	35
3. Some group-theoretical properties of O -groups	37
4. O^* -groups	39
5. Intersection of full orders	41
6. Vector groups	42

CHAPTER IV. *Fully ordered groups*

1. Archimedean fully ordered groups	44
2. Full orders on free groups	47
3. The chain of convex subgroups	50
4. Valuations of fully ordered Abelian groups	54
5. Hahn's embedding theorem	56
6. Cyclically ordered groups	61

CHAPTER V. *Lattice-ordered groups*

1. Algebraic rules	66
2. Orthogonality	70
3. Carriers	72
4. Positive and negative parts; absolutes	74
5. L -ideals	78
6. Groups with a finite number of carriers	82
7. Units	87
8. Lattice-ordered vector groups	88
9. Complete lattice-ordered groups	89
10. Embedding in complete lattice-ordered groups	92
11. The Cantor extension	95
12. Ideal systems	99

PARTIALLY ORDERED ALGEBRAIC SYSTEMS

SECOND PART

PARTIALLY ORDERED RINGS AND FIELDS

CHAPTER VI. <i>Preliminaries on partially ordered rings</i>	
1. Partial order on rings and fields	105
2. Examples	107
3. Ordering of rings of quotients	109
4. Embedding in a ring with identity	111
CHAPTER VII. <i>Extensions of partial orders in rings</i>	
1. Extension to a full order; <i>O</i> -rings	113
2. <i>O</i> -rings without divisors of zero	115
3. Real closed commutative fields	118
4. Intersection of full orders	123
5. Vector rings	124
CHAPTER VIII. <i>Fully ordered rings and fields</i>	
1. Archimedean fully ordered rings	126
2. The Archimedean classes	128
3. <i>O</i> -rings with divisors of zero	130
4. <i>o</i> -simple fully ordered rings	132
5. Formal power series fields	134
6. Completion of fully ordered fields	138
CHAPTER IX. <i>Lattice-ordered rings</i>	
1. General properties of lattice-ordered rings	141
2. Function rings	143
3. The <i>L</i> -radical of lattice-ordered rings	148

THIRD PART

PARTIALLY ORDERED SEMIGROUPS

CHAPTER X. <i>Partial orders on semigroups</i>	
1. Partially ordered groupoids and semigroups	153
2. Examples	155
3. The positive and negative cones	157
4. Semigroups of quotients	160
CHAPTER XI. <i>Fully ordered semigroups</i>	
1. Definitions and preliminary lemmas	162
2. Archimedean, naturally fully ordered semigroups	164
3. Subsemigroups of the group of real numbers	167
4. Archimedean semigroups with anomalous pairs	169
5. Archimedean classes	171
6. Ordinal sums	172
7. Completion of fully ordered semigroups	176
8. On a class of fully ordered groupoids	181
CHAPTER XII. <i>Lattice-ordered semigroups</i>	
1. Residuals	189
2. Lattice-ordered semigroups	191
3. The equivalence of Artin	192
4. Elements with special properties	195
5. Unicity statements on meet decompositions	198
6. Meet decompositions of elements	201
<i>Problems</i>	209
<i>Bibliography</i>	215
<i>Author index</i>	225
<i>Subject index</i>	227
