Pattern Recognition and Associative Memory as Dynamical Processes in a Synergetic System

A. Fuchs and H. Haken

Biol. Cybern. 60, 17–22 (1988)

In (5) of our paper [1], in the decomposition of \mathbf{q}^+ , the variable q_k must be replaced by q^k so that

$$\mathbf{q}^+ = \sum_{k=1}^M q^k \mathbf{v}^{(k)} + \mathbf{w}. \tag{5'}$$

This substitution must also be made everywhere in (6):

$$V(q^k) = -\frac{1}{2} \sum_{k=1}^M \lambda_k (q^k)^2 + \frac{1}{4} B \sum_{k \neq k'}^M (q^k)^2 (q^{k'})^2 + \frac{1}{4} C \left\{ \sum_{k=1}^M (q^k)^2 + |\mathbf{w}|^2 \right\}^2. \tag{6'}$$

Equation (8) becomes superfluous, while (7) and (9) simplify to

$$\dot{q}^j = -\frac{\partial V}{\partial q^j}, \quad \dot{\mathbf{w}} = -\frac{\partial V}{\partial \mathbf{w}}, \tag{7'}$$

$$\begin{aligned} \dot{q}^j &= \lambda_j q^j - B \sum_{k \neq j}^M (q^k)^2 q^j \\ &\quad - C \left\{ \sum_{k=1}^M (q^k)^2 + |\mathbf{w}|^2 \right\} q^j, \\ \dot{\mathbf{w}} &= -C \left\{ \sum_{k=1}^M (q^k)^2 + |\mathbf{w}|^2 \right\} \mathbf{w}. \end{aligned} \tag{9'}$$

Equations (9') are straightforward generalizations of (4.37) in [2] to $\mathbf{w} \neq \mathbf{0}$. Incidentally, in this way we avoid an (erroneous) omission of terms in (9). We wish to thank P. Schiske for drawing our attention to these omissions. The further results of our paper remain unchanged, however.
