## Preface

This book gives an introduction to the mathematical, probabilistic and numerical methods used in the modern theory of option pricing. It is intended as a textbook for graduate and advanced undergraduate students, but I hope it will be useful also for researchers and professionals in the financial industry.

Stochastic calculus and its applications to the arbitrage pricing of financial derivatives form the main theme. In presenting these, by now classic, topics, the emphasis is put on the more quantitative rather than economic aspects. Being aware that the literature in this field is huge, I mention the following incomplete list of monographs whose contents overlap with those of this text: in alphabetic order, Avellaneda and Laurence [14], Benth [43], Björk [47], Dana and Jeanblanc [84], Deynne, Howison and Wilmott [340], Dothan [100], Duffie [102], Elliott and Kopp [120], Epps [121], Follmer and Schied [134], Glasserman [158], Huang and Litzenberger [171], Ingersoll [178], Karatzas [200; 202], Lamberton and Lapeyre [226], Lipton [239], Merton [252], Musiela and Rutkowski [261], Neftci [264], Shreve [310; 311], Steele [315], Zhu, Wu and Chern [349].

What distinguishes this book from others is the attempt to present the matter by giving equal weight to the probabilistic point of view, based on the martingale theory, and the analytical one, based on partial differential equations. The present book does not claim to describe the latest developments in mathematical finance: that target would indeed be very ambitious, given the speed of progress of research in the field. Instead, I have chosen to develop some of the essential ideas of the classical pricing theory to devote space to the fundamental mathematical and numerical tools when they arise. Thus I hope to provide a sound background of basic knowledge which may facilitate the independent study of newer problems and more advanced models.

The theory of stochastic calculus, for continuous and discontinuous processes, constitutes the bulk of the book: Chapters 3 on stochastic processes, 4 on Brownian integration and 9 on stochastic differential equations may form the material for an introductory course on stochastic calculus. In these chapters, I have constantly sought to combine the theoretical concepts to the in-

sight on the financial meaning, in order to make the presentation less abstract and more motivated: in fact many theoretical concepts naturally lend themselves to an intuitive and meaningful economic interpretation.

The origin of this book can be traced to courses on option pricing which I taught at the master program in Quantitative Finance of the University of Bologna, which I have directed with Sergio Polidoro since its beginning, in 2004. I wrote the first version as lecture notes for my courses. During these years, I substantially improved and extended the text with the inclusion of sections on numerical methods and the addition of completely new chapters on stochastic calculus for jump processes and Fourier methods. Nevertheless, during these years the original structure of the book remained essentially unchanged.

I am grateful to many people for the suggestions and helpful comments with which supported and encouraged the writing of the book: in particular I would like to thank several colleagues and PhD students for many valuable suggestions on the manuscript, including David Applebaum, Francesco Caravenna, Alessandra Cretarola, Marco Di Francesco, Piero Foscari, Paolo Foschi, Ermanno Lanconelli, Antonio Mura, Cornelis Oosterlee, Sergio Polidoro, Valentina Prezioso, Enrico Priola, Wolfgang Runggaldier, Tiziano Vargiolu, Valeria Volpe. I also express my thanks to Rossella Agliardi, co-author of Chapter 13, and to Matteo Camaggi for helping me in the translation of the book.

It is greatly appreciated if readers could forward any errors, misprints or suggested improvements to: [andrea.pascucci@unibo.it](mailto:andrea.pascucci@unibo.it)  
Corrections received after publication will be posted on the website:

# Contents

<b>Preface</b> .....	V
<b>General notations</b> .....	XV
<b>1 Derivatives and arbitrage pricing</b> .....	1
1.1 Options .....	1
1.1.1 Main purposes .....	3
1.1.2 Main problems .....	4
1.1.3 Rules of compounding .....	4
1.1.4 Arbitrage opportunities and Put-Call parity formula ..	5
1.2 Risk-neutral price and arbitrage pricing .....	7
1.2.1 Risk-neutral price .....	7
1.2.2 Risk-neutral probability .....	8
1.2.3 Arbitrage price .....	8
1.2.4 A generalization of the Put-Call parity .....	10
1.2.5 Incomplete markets .....	11
<b>2 Discrete market models</b> .....	15
2.1 Discrete markets and arbitrage strategies .....	15
2.1.1 Self-financing and predictable strategies .....	16
2.1.2 Normalized market .....	19
2.1.3 Arbitrage opportunities and admissible strategies .....	20
2.1.4 Equivalent martingale measure .....	21
2.1.5 Change of numeraire .....	24
2.2 European derivatives .....	26
2.2.1 Pricing in an arbitrage-free market .....	27
2.2.2 Completeness .....	30
2.2.3 Fundamental theorems of asset pricing .....	31
2.2.4 Markov property .....	34
2.3 Binomial model .....	35
2.3.1 Martingale measure and arbitrage price .....	38
2.3.2 Hedging strategies .....	40

2.3.3	Binomial algorithm . . . . .	45
2.3.4	Calibration . . . . .	50
2.3.5	Binomial model and Black-Scholes formula . . . . .	53
2.3.6	Black-Scholes differential equation . . . . .	60
2.4	Trinomial model . . . . .	62
2.4.1	Pricing and hedging in an incomplete market . . . . .	66
2.5	American derivatives . . . . .	72
2.5.1	Arbitrage price . . . . .	74
2.5.2	Optimal exercise strategies . . . . .	80
2.5.3	Pricing and hedging algorithms . . . . .	83
2.5.4	Relations with European options . . . . .	88
2.5.5	Free-boundary problem for American options . . . . .	90
2.5.6	American and European options in the binomial model . . . . .	93
<b>3</b>	<b>Continuous-time stochastic processes . . . . .</b>	<b>97</b>
3.1	Stochastic processes and real Brownian motion . . . . .	97
3.1.1	Markov property . . . . .	100
3.1.2	Brownian motion and the heat equation . . . . .	102
3.2	Uniqueness . . . . .	103
3.2.1	Law of a continuous process . . . . .	103
3.2.2	Equivalence of processes . . . . .	105
3.2.3	Modifications and indistinguishable processes . . . . .	107
3.2.4	Adapted and progressively measurable processes . . . . .	110
3.3	Martingales . . . . .	111
3.3.1	Doob's inequality . . . . .	113
3.3.2	Martingale spaces: $\mathcal{M}^2$ and $\mathcal{M}_c^2$ . . . . .	114
3.3.3	The usual hypotheses . . . . .	117
3.3.4	Stopping times and martingales . . . . .	120
3.4	Riemann-Stieltjes integral . . . . .	125
3.4.1	Bounded-variation functions . . . . .	127
3.4.2	Riemann-Stieltjes integral and Itô formula . . . . .	131
3.4.3	Regularity of the paths of a Brownian motion . . . . .	134
<b>4</b>	<b>Brownian integration . . . . .</b>	<b>139</b>
4.1	Stochastic integral of deterministic functions . . . . .	140
4.2	Stochastic integral of simple processes . . . . .	141
4.3	Integral of $\mathbb{L}^2$ -processes . . . . .	145
4.3.1	Itô and Riemann-Stieltjes integral . . . . .	149
4.3.2	Itô integral and stopping times . . . . .	151
4.3.3	Quadratic variation process . . . . .	153
4.3.4	Martingales with bounded variation . . . . .	156
4.3.5	Co-variation process . . . . .	157
4.4	Integral of $\mathbb{L}_{\text{loc}}^2$ -processes . . . . .	159
4.4.1	Local martingales . . . . .	161
4.4.2	Localization and quadratic variation . . . . .	163

<b>5</b>	<b>Itô calculus</b> . . . . .	167
5.1	Itô processes . . . . .	168
5.1.1	Itô formula for Brownian motion . . . . .	169
5.1.2	General formulation . . . . .	174
5.1.3	Martingales+and parabolic equations . . . . .	176
5.1.4	Geometric Brownian motion . . . . .	176
5.2	Multi-dimensional Itô processes . . . . .	179
5.2.1	Multi-dimensional Itô formula . . . . .	183
5.2.2	Correlated Brownian motion+and martingales . . . . .	188
5.3	Generalized Itô formulas . . . . .	191
5.3.1	Itô formula and+weak derivatives . . . . .	191
5.3.2	Tanaka formula+and local times . . . . .	194
5.3.3	Tanaka+formula for Itô processes . . . . .	197
5.3.4	Local+time and Black-Scholes formula . . . . .	198
<b>6</b>	<b>Parabolic PDEs with variable coefficients: uniqueness</b> . . . . .	203
6.1	Maximum principle and Cauchy-Dirichlet problem . . . . .	206
6.2	Maximum principle and Cauchy problem . . . . .	208
6.3	Non-negative solutions of the Cauchy problem . . . . .	213
<b>7</b>	<b>Black-Scholes model</b> . . . . .	219
7.1	Self-financing strategies . . . . .	220
7.2	Markovian strategies and Black-Scholes equation . . . . .	222
7.3	Pricing . . . . .	225
7.3.1	Dividends and time-dependent parameters . . . . .	228
7.3.2	Admissibility and absence of arbitrage . . . . .	229
7.3.3	Black-Scholes analysis: heuristic approaches . . . . .	231
7.3.4	Market price of risk . . . . .	233
7.4	Hedging . . . . .	236
7.4.1	The Greeks . . . . .	236
7.4.2	Robustness of the model . . . . .	245
7.4.3	Gamma and Vega-hedging . . . . .	246
7.5	Implied volatility . . . . .	248
7.6	Asian options . . . . .	252
7.6.1	Arithmetic average . . . . .	253
7.6.2	Geometric average . . . . .	255
<b>8</b>	<b>Parabolic PDEs with variable coefficients: existence</b> . . . . .	257
8.1	Cauchy problem and fundamental solution . . . . .	258
8.1.1	Levi's parametrix method . . . . .	260
8.1.2	Gaussian estimates and adjoint operator . . . . .	261
8.2	Obstacle problem . . . . .	263
8.2.1	Strong solutions . . . . .	265
8.2.2	Penalization method . . . . .	268

<b>9</b>	<b>Stochastic differential equations</b>	275
9.1	Strong solutions	276
9.1.1	Uniqueness	278
9.1.2	Existence	280
9.1.3	Properties of solutions	283
9.2	Weak solutions	286
9.2.1	Tanaka's example	286
9.2.2	Existence: the martingale problem	287
9.2.3	Uniqueness	290
9.3	Maximal estimates	292
9.3.1	Maximal estimates for martingales	293
9.3.2	Maximal estimates for diffusions	296
9.4	Feynman-Kač representation formulas	298
9.4.1	Exit time from a bounded domain	300
9.4.2	Elliptic-parabolic equations and Dirichlet problem	302
9.4.3	Evolution equations and Cauchy-Dirichlet problem	307
9.4.4	Fundamental solution and transition density	308
9.4.5	Obstacle problem and optimal stopping	310
9.5	Linear equations	314
9.5.1	Kalman condition	318
9.5.2	Kolmogorov equations and Hörmander condition	323
9.5.3	Examples	326
<b>10</b>	<b>Continuous market models</b>	329
10.1	Change of measure	329
10.1.1	Exponential martingales	329
10.1.2	Girsanov's theorem	332
10.1.3	Representation of Brownian martingales	334
10.1.4	Change of drift	339
10.2	Arbitrage theory	340
10.2.1	Change of drift with correlation	343
10.2.2	Martingale measures and market prices of risk	345
10.2.3	Examples	348
10.2.4	Admissible strategies and arbitrage opportunities	352
10.2.5	Arbitrage pricing	355
10.2.6	Complete markets	357
10.2.7	Parity formulas	358
10.3	Markovian models: the PDE approach	359
10.3.1	Martingale models for the short rate	361
10.3.2	Pricing and hedging in a complete model	364
10.4	Change of numeraire	366
10.4.1	LIBOR market model	370
10.4.2	Change of numeraire for Itô processes	372
10.4.3	Pricing with stochastic interest rate	374
10.5	Diffusion-based volatility models	376

10.5.1	Local and path-dependent volatility . . . . .	377
10.5.2	CEV model . . . . .	379
10.5.3	Stochastic volatility and the SABR model . . . . .	386
<b>11</b>	<b>American options . . . . .</b>	<b>389</b>
11.1	Pricing and hedging in the Black-Scholes model . . . . .	389
11.2	American Call and Put options in the Black-Scholes model . .	395
11.3	Pricing and hedging in a complete market . . . . .	398
<b>12</b>	<b>Numerical methods . . . . .</b>	<b>403</b>
12.1	Euler method for ordinary equations . . . . .	403
12.1.1	Higher order schemes . . . . .	407
12.2	Euler method for stochastic differential equations . . . . .	408
12.2.1	Milstein scheme . . . . .	411
12.3	Finite-difference methods for parabolic equations . . . . .	412
12.3.1	Localization . . . . .	413
12.3.2	$\theta$ -schemes for the Cauchy-Dirichlet problem . . . . .	414
12.3.3	Free-boundary problem . . . . .	419
12.4	Monte Carlo methods . . . . .	420
12.4.1	Simulation . . . . .	423
12.4.2	Computation of the Greeks . . . . .	425
12.4.3	Error analysis . . . . .	427
<b>13</b>	<b>Introduction to Lévy processes . . . . .</b>	<b>429</b>
13.1	Beyond Brownian motion . . . . .	429
13.2	Poisson process . . . . .	432
13.3	Lévy processes . . . . .	437
13.3.1	Infinite divisibility and characteristic function . . . . .	439
13.3.2	Jump measures of compound Poisson processes . . . . .	444

13.5.3	Esscher transform . . . . .	486
13.5.4	Exotic option pricing . . . . .	491
13.5.5	Beyond Lévy processes . . . . .	494

<b>14 Stochastic calculus for jump processes</b> .....	497
14.1 Stochastic integrals .....	497
14.1.1 Predictable processes .....	500
14.1.2 Semimartingales .....	504
14.1.3 Integrals with respect to jump measures .....	507
14.1.4 Lévy-type stochastic integrals .....	511
14.2 Stochastic differentials .....	514
14.2.1 Itô formula for discontinuous functions .....	514
14.2.2 Quadratic variation .....	515
14.2.3 Itô formula for semimartingales .....	518
14.2.4 Itô formula for Lévy processes .....	520
14.2.5 SDEs with jumps and Itô formula .....	525
14.2.6 PIDEs and Feynman-Kač representation .....	529
14.2.7 Linear SDEs with jumps .....	532
14.3 Lévy models with stochastic volatility .....	534
14.3.1 Lévy-driven models and pricing PIDEs .....	534
14.3.2 Bates model .....	537
14.3.3 Barndorff-Nielsen and Shephard model .....	539
<b>15 Fourier methods</b> .....	541
15.1 Characteristic functions and branch cut .....	542
15.2 Integral pricing formulas .....	545
15.2.1 Damping method .....	546
15.2.2 Pricing formulas .....	547
15.2.3 Implementation .....	551
15.2.4 Choice of the damping parameter .....	553
15.3 Fourier-cosine series expansions .....	562
15.3.1 Implementation .....	567
<b>16 Elements of Malliavin calculus</b> .....	577
16.1 Stochastic derivative .....	578
16.1.1 Examples .....	580
16.1.2 Chain rule .....	582
16.2 Duality .....	586
16.2.1 Clark-Ocone formula .....	588
16.2.2 Integration by parts and computation of the Greeks ..	590
16.2.3 Examples .....	594
<b>Appendix: a primer in probability and parabolic PDEs</b> .....	599
A.1 Probability spaces .....	599
A.1.1 Dynkin's theorems .....	601
A.1.2 Distributions .....	605
A.1.3 Random variables .....	608
A.1.4 Integration .....	610
A.1.5 Mean and variance .....	612

A.1.6	$\sigma$ -algebras and information .....	618
A.1.7	Independence .....	619
A.1.8	Product measure and joint distribution.....	622
A.1.9	Markov inequality .....	625
A.2	Fourier transform.....	626
A.3	Parabolic equations with constant coefficients .....	630
A.3.1	A special case.....	631
A.3.2	General case .....	636
A.3.3	Locally integrable initial datum .....	637
A.3.4	Non-homogeneous Cauchy problem .....	638
A.3.5	Adjoint operator .....	639
A.4	Characteristic function and normal distribution .....	641
A.4.1	Multi-normal distribution .....	643
A.5	Conditional expectation .....	646
A.5.1	Radon-Nikodym theorem.....	646
A.5.2	Conditional expectation .....	648
A.5.3	Conditional expectation and discrete random variables .....	650
A.5.4	Properties of the conditional expectation .....	652
A.5.5	Conditional expectation in $L^2$ .....	655
A.5.6	Change of measure .....	656
A.6	Stochastic processes in discrete time .....	657
A.6.1	Doob's decomposition.....	659
A.6.2	Stopping times .....	661
A.6.3	Doob's maximal inequality .....	665
A.7	Convergence of random variables .....	669
A.7.1	Characteristic function and convergence of variables ..	670
A.7.2	Uniform integrability .....	674
A.8	Topologies and $\sigma$ -algebras .....	676
A.9	Generalized derivatives.....	678
A.9.1	Weak derivatives in $\mathbb{R}$ .....	678
A.9.2	Sobolev spaces and embedding theorems .....	681
A.9.3	Distributions .....	682
A.9.4	Mollifiers .....	687
A.10	Separation of convex sets .....	690
