

PERMANENT MAGNET MATERIALS AND THEIR APPLICATION

PETER CAMPBELL

*President, Princeton Electro-Technology, Inc., Boca Raton,
Florida*

CAMBRIDGE
UNIVERSITY PRESS

Contents

<i>Preface</i>	<i>page ix</i>
1 Fundamentals of magnetism	1
1.1 Introduction	1
1.2 Magnetic dipole moment	2
1.3 Magnetizing force	5
1.4 Magnetocrystalline anisotropy	9
1.5 Magnetic energy	15
1.6 Shape anisotropy	19
References	23
2 Permanent magnet processes	25
2.1 Introduction	25
2.2 Magnetic domains	26
2.3 Ceramic ferrite magnets	32
2.4 Alnico magnets	35
2.5 Samarium-cobalt magnets	38
2.6 Neodymium-iron-boron magnets	45
2.7 Bonded magnets	51
References	56
3 Thermal stability	57
3.1 Introduction	57
3.2 The Curie temperature	59
3.3 Demagnetization curves	61
3.4 Composition variations	69
3.5 Surface oxidation	76
References	80
4 Magnetic circuit design	82
4.1 Introduction	82
4.2 Field equations	83
4.3 Static operation	85

4.4	Dynamic operation	90
4.5	Energy transfer	97
4.6	Equivalent magnetic circuit	105
	References	112
5	Magnetic field analysis	113
5.1	Introduction	113
5.2	Magnetostatic fields	114
5.3	The finite difference method	120
5.4	Permanent magnet model	124
5.5	The finite element method	126
	References	133
6	Magnetizing and testing	134
6.1	Introduction	134
6.2	Magnetization	134
6.3	Demagnetization	145
6.4	Field measurement	146
	References	157
7	Applications	158
7.1	Introduction	158
7.2	d.c. motors	161
7.3	Stepper motors	172
7.4	Synchronous motors	178
7.5	Moving coil actuators	180
7.6	Holding force actuators	185
7.7	Magnetic suspensions	189
7.8	Sensors	195
7.9	Steady fields	200
	References	203
	<i>Index</i>	204
