Selected List of Figures	xxi
Selected List of Tables	xxv
Notation and Conventions	xxvii

1. Photoelasticity of Crystals. Introduction

1.1. Discovery of the Phenomenon of Photoelasticity	1
1.2. Mathematical Formulation and Neumann's Constants. Pockels' Contribution	1
1.3. A Brief Historical Survey	3
1.3.1. Amorphous Solids	3
1.3.2. Cubic Crystals	6
1.3.3. Uniaxial and Biaxial Crystals	7

2. Mathematical Tools, Tensor Properties of Crystals, and Geometrical Crystallography

2.1. Linear Transformations	9
2.1.1. Coordinate Transformations	9
2.1.2. Orthogonality Relations	10
2.1.3. The Determinant of the Matrix $[\alpha_{ij}]$ of the Direction-Cosine Scheme	13
2.2. Matrix Algebra	14
2.2.1. Introduction	14
2.2.2. Matrix Algebra and Coordinate Transformations	15
2.2.3. Some Common Types of Matrices	16
2.2.4. Orthogonal Matrix	17
2.2.5. Matrix Operators and Transformation of Tensor Components	17
2.2.6. The Diagonalization of a Matrix	18
2.3. Vectors and Their Transformation Laws	19
2.3.1. Vector Components and Coordinate Transformations	19
2.3.2. Transformations of Coordinate Differences	20
2.3.3. Transformation Law of Vectors	21
2.4. Tensor Nature of Physical Properties of Crystals and the Laws of Transformation of Cartesian Tensors	21
2.4.1. Concept of a Tensor Property and Some Examples of Tensor Properties	21

2.4.2.	Transformation Law of Cartesian Tensors	24
2.4.3.	Physical Properties and Crystal Symmetry	28
2.5.	Crystal Symmetry and Geometrical Crystallography. The 32 Point Groups	29
2.5.1.	The 32 Crystallographic Point Groups: Their Symmetry Elements and Some Examples of Crystals	29
2.5.2.	Some Symmetry Operations and Their Representation by Symbols	32
2.5.3.	The 32 Crystallographic Point Groups in the Schönflies Notation. Geometric Derivation	33
2.6.	Symmetry Operations and Their Transformation Matrices	36
2.7.	Symmetry Elements of the 32 Point Groups	39
2.7.1.	Symmetry Elements of the 32 Point Groups	39
2.7.2.	Comments on the 32 Crystallographic Point Groups and Their Symmetry Elements as Listed in Tables 2.3 and 2.5a	43
2.8.	Neumann's Principle and Effect of Crystal Symmetry on Physical Properties	44
3.	<i>Pockels' Phenomenological Theory of Photoelasticity of Crystals</i>	
3.1.	Introduction	47
3.2.	Phenomenological Theory, Stress-Optical and Strain-Optical Constants in Four- and Two-Suffix Notations; q_{ij} and p_{ij} Matrices for the 32 Crystallographic Point Groups	49
3.2.1.	The Assumptions Forming the Basis of Pockels' Theory	49
3.2.2.	Mathematical Formulation of Photoelasticity in Terms of q_{ijkl} and p_{ijkl}	50
3.2.3.	Mathematical Formulation of Photoelasticity in Terms of q_{ij} and p_{ij}	52
3.2.4.	Crystal Symmetry and the Number of Photoelastic Constants	57
3.3.	Derivation of the Nonvanishing and Independent Photoelastic Constants for the Various Crystal Classes by Different Methods	58
3.3.1.	Classical Method	64
3.3.2.	Tensor Method	77
3.3.3.	Group Theoretical Method	97
4.	<i>Elasticity of Crystals</i>	
4.1.	Introduction	135
4.2.	Stress and Strain as Tensors	136
4.2.1.	Stress as a Second-Rank Tensor	136
4.2.2.	Strain as a Second-Rank Tensor	139
4.3.	Hooke's Law	142
4.3.1.	Generalized Form of Hooke's Law with Elastic Constants c_{ij} and s_{ij} and the Matrices of c_{ij} and s_{ij} for the 32 Point Groups	142

4.3.2.	Generalized Form of Hooke's Law with Elastic Constants c_{ijkl} and s_{ijkl}	145
4.3.3.	Interrelation between c_{ijkl} and c_{mn} and between s_{ijkl} and s_{mn}	151
4.4.	Experimental Methods of Determining c_{ij} and s_{ij} ; Christoffel's Equation and Its Use in Determining c_{ij} of Crystals	154
4.5.	Ultrasonics	160
4.5.1.	Introduction	160
4.5.2.	Diffraction of Light by Liquids Excited Ultrasonically	161
4.5.3.	Optical Methods of Determining the Ultrasonic Velocities and Elastic Constants of Transparent Solids Employing the Schaefer-Bergmann Pattern, the Hiedemann Pattern, and the Lucas-Biquard Effect	165
4.5.4.	Mayer and Hiedemann's Experiments	170
4.5.5.	Raman-Nath Theory of Diffraction of Light by Ultrasonic Waves.	176
4.5.6.	Doppler Effect and Coherence Phenomenon	184
4.6.	Brillouin Effect and Crystal Elasticity	186
4.6.1.	Introduction	186
4.6.2.	Theory of Light Scattering in Birefringent Crystals	189
4.6.3.	Concluding Remarks	194

5. *Experimental Methods of Determining the Photoelastic Constants*

5.1.	Optical Behavior of a Solid under a Mechanical Stress, and Neumann's Constants	197
5.2.	Derivation of Expressions for the Stress Birefringence in Terms of q_{ij} for Cubic and Noncubic Crystals	198
5.2.1.	Stress Birefringence in Cubic Crystals	198
5.2.2.	Stress Birefringence in Noncubic Crystals	205
5.2.3.	Tensor Method of Deriving q'_{ijkl} in Terms of q_{mnop}	217
5.2.4.	Expression for the Change of Thickness in Terms of s_{ij} for an Orthorhombic Crystal for a Specific Orientation	219
5.3.	Experimental Determination of q_{ij} and p_{ij} by Optical Methods	220
5.3.1.	Measurement of Stress Birefringence, and Relative Path Retardation	222
5.3.2.	Measurement of Absolute Path Retardation by Interferometric Methods.	226
5.3.3.	Photoelastic Studies of Optically Active Crystals	231
5.4.	Dispersion of q_{ij} by Spectroscopic Methods	234
5.4.1.	Birefringent Compensator for Studying Very Small Changes in Double Refraction	234
5.4.2.	Dispersion of the Individual Stress-Optical Coefficients q_{11} and q_{12} of Vitreous Silica	241
5.4.3.	Interference-Spectroscope Method of Studying the Absolute Photoelastic Coefficients of Glasses and Their Variation with Wavelength	243

5.5.	Elliptic Vibrations and Elliptically Polarized Light	246
5.5.1.	Composition of Two Rectangular Vibrations Giving an Ellipse: Use of the Sénarmont Compensator	246
5.5.2.	Photometric Method for the Measurement of Photoelastic Birefringence	253
5.5.3.	The Poincaré Sphere and Its Application to the Study of the Photoelastic Behavior of Optically Active Crystals	256
5.6.	Ultrasonic Methods of Studying the Elasto-Optic Behavior of Crystals	262
5.6.1.	Introduction	262
5.6.2.	Mueller's Theory	263
5.6.3.	Experimental Determination of p_{ij}/p_{kl} by Three Different Methods Due to Mueller	269
5.6.4.	Petterson's Method of Determining p_{ij}/p_{kl}	278
5.6.5.	Bragg Diffraction Method of Determining the Individual Values of p_{ij}	281
5.6.6.	Borrelli and Miller's Method of Determining the p_{ij} of Glass	286
5.6.7.	Technological Applications of the Acousto-Optic Effect	289
5.7.	Brillouin Scattering and Photoelasticity of Crystals	289
6.	<i>Atomistic Theory of Photoelasticity of Cubic Crystals</i>	
6.1.	Introduction	299
6.2.	Mueller's Theory—A Brief Survey	302
6.3.	Effect of Hydrostatic Pressure on the Index of Refraction n ; The Strain Polarizability Constant λ_0	306
6.4.	Anisotropy of R_j and λ_j	308
6.5.	Thermo-Optic Behavior of Crystals and Photoelastic Behavior.	312
6.6.	Pockels' Photoelastic Groups in Cubic Crystals and Mueller's Theory	313
6.7.	Photoelastic Dispersion in Cubic Crystals; λ_0 as a Function of Crystalline Material, Wavelength of Light, and Temperature	315
6.8.	Effect of Elastic Deformation on the Oscillator Strengths and Dispersion Frequencies of Optical Electrons	321
6.9.	Temperature Dependence of Stress-Optical Dispersion	323
6.10.	Reversal of the Sign of Stress Birefringence in Pure and Mixed Crystals	324
6.10.1.	Pure Crystals	324
6.10.2.	Mixed Crystals of KCl and KBr	325
6.11.	Stress-Optical and Strain-Optical Isotropy in Cubic Crystals	327
6.12.	Optic Axial Angle and Its Dispersion in Stressed Cubic Crystals of T and T_h Classes	329
7.	<i>Piezoelectricity</i>	
7.1.	Introduction	333
7.2.	Direct and Converse Piezoelectric Effects	334

7.3.	Mathematical Formulation, Piezoelectric Constants d_{ijk} in Tensor Notation, and d_{ij} in Two-Suffix Notation; Relation between d_{ijk} and d_{ij}	335
7.4.	Deduction of the Surviving d_{ijk} for Some Crystal Classes by Tensor Method, and the d_{ij} Matrices for the 21 Noncentrosymmetric Classes	338
7.5.	Concluding Remarks	344
8.	<i>Electro-Optic Effects in Crystals: Pockels Linear Electro-Optic and Kerr Quadratic Electro-Optic Effects</i>	
8.1.	Introduction	345
8.2.	Demonstration of the Electro-Optic Effects, Linear and Quadratic	346
8.3.	Historical Survey	347
8.3.1.	Earlier Work	347
8.3.2.	More Recent Work.	347
8.4.	Pockels' Phenomenological Theory of the Linear Electro-Optic Effect in Three- and Two-Suffix Notations, R_{ijk} and r_{ij}	351
8.5.	Derivation of the Relation between the Linear Electro-Optic Constants of a Crystal: Free and Clamped Constants	355
8.5.1.	Discussion: Primary and Secondary Electro-Optic Effects, and Clamped and Unclamped Electro-Optic Coefficients	357
8.5.2.	Methods of Obtaining the Primary and Secondary Linear Electro-Optic Effects	358
8.6.	Kerr Quadratic Electro-Optic Effect: Pockels' Phenomenological Theory	359
8.7.	Crystal Symmetry and the Number of Surviving Linear Electro-Optic Coefficients R_{ijk} and r_{ij} and Their Deduction by Tensor Method: r_{ij} Matrices for the 21 Noncentrosymmetric Classes	362
8.7.1.	Crystal Symmetry and the Surviving Linear Electro-Optic Constants	362
8.7.2.	Tensor Method of Deducing the Nonvanishing Independent R_{ijk}	363
8.8.	Derivation of the Expressions for $\delta = f(r_{ij})$ for Some Typical Crystal Classes and Orientations	388
8.8.1.	Cubic System: Classes $23 (T)$ and $\bar{4}3m (T_d)$	388
8.8.2.	Tetragonal System: Class $\bar{4}2m (D_{2d})$	391
8.8.3.	Trigonal System: Class $32 (D_3)$	394
8.9.	Experimental Methods of Determining r_{ij}	399
8.9.1.	General Description and Application to Some Typical Crystal Classes	399
8.9.2.	Some Experimental Methods	400
8.9.3.	Methods of Applying the Electric Field to the Crystal Prism	401

8.9.4. Experimental Determination of r_{ij} in Some Specific Cases of Crystals	401
8.10. Some Points of Interest on the Use of the Pockels Effect in Crystals, and Half-Wave Voltage $V_{\lambda/2}$	409
8.11. Some Technological Applications of Pockels Cells (Linear Electro-Optic Devices)	411
8.11.1. Use of the Electro-Optic Effect in Technology	411
8.11.2. Some Applications of Electro-Optic Devices	412
