Preface	xv
Acknowledgments	xxi

v

2.3	Field Radiated by a Small Circular Loop.....	30
2.4	Field Produced by a Finite-Sized Dipole	32
2.5	Radiation Field from a Linear Antenna	34
2.6	Near- and Far-Field Properties of Antennas.....	36
2.6.1	What Is Beamforming Using Antennas	36
2.6.2	Use of Spatial Antenna Diversity	43
2.7	The Mathematics and Physics of an Antenna Array.....	46
2.8	Propagation Modeling in the Frequency Domain	49
2.9	Conclusion	57
	References	57

Chapter 3 Fundamentals of an Antenna in the Time Domain 59

3.0	Summary.....	59
3.1	Introduction	59
3.2	UWB Input Pulse.....	61
3.3	Travelling-Wave Antenna.....	62
3.4	Reciprocity Relation Between Antennas	63
3.5	Antenna Simulations.....	65
3.6	Loaded Antennas	65
3.6.1	Dipole.....	65
3.6.2	Bicones	71
3.6.3	TEM Horn	74
3.6.4	Log-Periodic.....	78
3.6.5	Spiral	80
3.7	Conventional Wideband Antennas	83
3.7.1	Volcano Smoke	83
3.7.2	Diamond Dipole	85
3.7.3	Monofilar Helix.....	86
3.7.4	Conical Spiral.....	88
3.7.5	Monoloop	90
3.7.6	Quad-Ridged Circular Horn	91
3.7.7	Bi-Blade with Century Bandwidth	93
3.7.8	Cone-Blade.....	94
3.7.9	Vivaldi.....	96
3.7.10	Impulse Radiating Antenna (IRA).....	97
3.7.11	Circular Disc Dipole.....	99
3.7.12	Bow-Tie.....	100
3.7.13	Planar Slot	101
3.8	Experimental Verification of the Wideband Responses from Antennas	102
3.9	Conclusion	108
	References	109

Chapter 4 A Look at the Concept of Channel Capacity from a Maxwellian Viewpoint

4.0	Summary.....	113
4.1	Introduction	114
4.2	History of Entropy and Its Evolution.....	117
4.3	Different Formulations for the Channel Capacity.....	118
4.4	Information Content of a Waveform.....	124
4.5	Numerical Examples Illustrating the Relevance of the Maxwellian Physics in Characterizing the Channel Capacity.....	130
4.5.1	Matched Versus Unmatched Receiving Dipole Antenna with a Matched Transmitting Antenna Operating in Free Space	131
4.5.2	Use of Directive Versus Nondirective Matched Transmitting Antennas Located at Different Heights above the Earth for a Fixed Matched Receiver Height above Ground	133
4.5.2.1	<i>Transmitting Horn Antenna at a Height of 20 m.....</i>	135
4.5.2.2	<i>Transmitting Dipole Antenna at a Height of 20 m.....</i>	136
4.5.2.3	<i>Orienting the Transmitting Horn or the Dipole Antenna Located at a Height of 20 m Towards the Receiving Antenna</i>	137
4.5.2.4	<i>The Transmitting Horn and Dipole Antenna Located at a Height of 2 m above Ground</i>	137
4.5.2.5	<i>Transmitting Horn and Dipole Antenna Located Close to the Ground but Tilted Towards the Sky ...</i>	138
4.5.2.6	<i>Channel Capacity as a Function of the Height of the Transmitting Dipole Antenna from the Earth.....</i>	139
4.5.2.7	<i>Presence of a Dielectric Wall Interrupting the Direct Line-of-sight Between Transmitting and Receiving Antennas</i>	141
4.5.2.8	<i>Increase in Channel Capacity when Matched Receiving Antenna Is Encapsulated by a Dielectric Box.....</i>	143
4.6	Conclusion.....	146
4.7	Appendix: History of Entropy and Its Evolution.....	148
	References	164

5.0	Summary.....	167
5.1	Introduction	168
5.2	Diversity in Wireless Communications	168
5.2.1	Time Diversity.....	169
5.2.2	Frequency Diversity	170
5.2.3	Space Diversity.....	170
5.3	Multiantenna Systems.....	172
5.4	Multiple-Input-Multiple-Output (MIMO) Systems	173
5.5	Channel Capacity of the MIMO Antenna Systems.....	176
5.6	Channel Known at the Transmitter.....	178
5.6.1	Water-filling Algorithm.....	179
5.7	Channel Unknown at the Transmitter	180
5.7.1	Alamouti Scheme	180
5.8	Diversity-Multiplexing Tradeoff	182
5.9	MIMO Under a Vector Electromagnetic Methodology	183
5.9.1	MIMO Versus SISO	184
5.10	More Appealing Results for a MIMO system.....	189
5.10.1	Case Study: 1.....	189
5.10.2	Case Study: 2.....	190
5.10.3	Case Study: 3.....	191
5.10.4	Case Study: 4.....	194
5.10.5	Case Study: 5.....	197
5.11	Physics of MIMO in a Nutshell	199
5.11.1	Line-of-Sight (LOS) MIMO Systems with Parallel Antenna Elements Oriented Along the Broadside Direction.....	200
5.11.2	Line-of-Sight MIMO Systems with Parallel Antenna Elements Oriented Along the Broadside Direction.....	202
5.11.3	Non-line-of-Sight MIMO Systems with Parallel Antenna Elements Oriented Along the Broadside Direction.....	204
5.12	Conclusion	206
	References	207

Chapter 6 Use of the Output Energy Filter in Multiantenna Systems for Adaptive Estimation 209

6.0	Summary.....	209
6.1	Various Forms of the Optimum Filters	210
6.1.1	Matched Filter (Cross-correlation filter)	211
6.1.2	A Wiener Filter.....	212
6.1.3	An Output Energy Filter (Minimum Variance Filter).....	213
6.1.4	Example of the Filters	214

6.2	Direct Data Domain Least Squares Approaches to Adaptive Processing Based on a Single Snapshot of Data ...	215
6.2.1	Eigenvalue Method.....	218
6.2.2	Forward Method.....	220
6.2.3	Backward Method.....	221
6.2.4	Forward-Backward Method.....	222
6.2.5	Real Time Implementation of the Adaptive Procedure.....	224
6.3	Direct Data Domain Least Squares Approach to Space-Time Adaptive Processing	226
6.3.1	Two-Dimensional Generalized Eigenvalue Processor	230
6.3.2	Least Squares Forward Processor.....	232
6.3.3	Least Squares Backward Processor.....	236
6.3.4	Least Squares Forward-Backward Processor	237
6.4	Application of the Direct Data Domain Least Squares Techniques to Airborne Radar for Space-Time Adaptive Processing	238
6.5	Conclusion.....	246
	References	247
Chapter 7	Minimum Norm Property for the Sum of the Adaptive Weights in Adaptive or in Space-Time Processing	249
7.0	Summary.....	249
7.1	Introduction	250
7.2	Review of the Direct Data Domain Least Squares Approach	251
7.3	Review of Space-Time Adaptive Processing Based on the D3LS Method	253
7.4	Minimum Norm Property of the Adaptive Weights at the DOA of the SOI for the 1-D Case and at Doppler Frequency and DOA for STAP.....	255
7.5	Numerical Examples.....	258
7.6	Conclusion.....	273
	References	274
Chapter 8	Using Real Weights in Adaptive and Space-Time Processing	275
8.0	Summary.....	275
8.1	Introduction	275
8.2	Formulation of a Direct Data Domain Least Squares Approach Using Real Weights	277
8.2.1	Forward Method.....	277
8.2.2	Backward Method	281

	8.2.3. Forward-Backward Method.....	282
8.3	Simulation Results for Adaptive Processsing	283
8.4	Formulation of an Amplitude-only Direct Data Domain Least Squares Space-Time Adaptive Processing	289
	8.4.1 Forward Method	289
	8.4.2 Backward Method	291
	8.4.3 Forward-Backward Method.....	292
8.5	Simulation Results	292
8.6	Conclusion	299
	References	300

Chapter 9 Phase-Only Adaptive and Space-Time Processing 303

9.0	Summary.....	303
9.1	Introduction	303
9.2	Formulation of the Direct Data Domain Least Squares Solution for a Phase-Only Adaptive System.....	304
	9.2.1 Forward Method	304
	9.2.2 Backward Method	310
	9.2.3 Forward-Backward Method.....	310
9.3	Simulation Results	311
9.4	Formulation of a Phase-Only Direct Data Domain Least Squares Space-Time Adaptive Processing.....	318
	9.4.1 Forward Method	318
	9.4.2 Backward Method	318
	9.4.3 Forward-Backward Method.....	318
9.5	Simulation Results	319
9.6	Conclusion	322
	References	322

Chapter 10 Simultaneous Multiple Adaptive Beamforming 323

10.0	Summary.....	323
10.1	Introduction	323
10.2	Formulation of a Direct Data Domain Approach for Multiple Beamforming	324
	10.2.1 Forward Method	324
	10.2.2 Backward Method	327
	10.2.3 Forward-Backward Method.....	328
10.3	Simulation Results	328
10.4	Formulation of a Direct Data Domain Least Squares Approach for Multiple Beamforming in Space-Time Adaptive Processing	332
	10.4.1 Forward Method	332
	10.4.2 Backward Method	336
	10.4.3 Forward-Backward Method.....	337

10.5	Simulation Results	338
10.6	Conclusion	345
	References	345
Chapter 11	Performance Comparison Between Statistical-Based and Direct Data Domain Least Squares Space-Time Adaptive Processing Algorithms	347
11.0	Summary	347
11.1	Introduction	347
11.2	Description of the Various Signals of Interest	348
11.2.1	Modeling of the Signal-of-Interest	349
11.2.2	Modeling of the Clutter	349
11.2.3	Modeling of the Jammer	350
11.2.4	Modeling of the Discrete Interferers	350
11.3	Statistical-Based STAP Algorithms	351
11.3.1	Full-Rank Optimum STAP	351
11.3.2	Reduced-Rank STAP (Relative Importance of the Eigenbeam Method)	352
11.3.3	Reduced-Rank STAP (Based on the Generalized Sidelobe Canceller)	353
11.4	Direct Data Domain Least Squares STAP Algorithms	356
11.5	Channel Mismatch	356
11.6	Simulation Results	357
11.7	Conclusion	368
	References	368
Chapter 12	Approximate Compensation for Mutual Coupling Using the In Situ Antenna Element Patterns	371
12.0	Summary	371
12.1	Introduction	371
12.2	Formulation of the New Direct Data Domain Least Squares Approach Approximately Compensating for the Effects of Mutual Coupling Using the In Situ Element Patterns	373
12.2.1	Forward Method	373
12.2.3	Backward Method	376
12.2.4	Forward-Backward Method	377
12.3	Simulation Results	378
12.4	Reason for a Decline in the Performance of the Algorithm When the Intensity of the Jammer Is Increased	386
12.5	Conclusion	386
	References	386

Chapter 13	Signal Enhancement Through Polarization Adaptivity on Transmit in a Near-Field MIMO Environment	389
13.0	Summary	389
13.1	Introduction	389
13.2	Signal Enhancement Methodology Through Adaptivity on Transmit.....	391
13.3	Exploitation of the Polarization Properties in the Proposed Methodology	395
13.4	Numerical Simulations	395
13.4.1	Example 1.....	396
13.4.2	Example 2.....	402
13.4.3	Example 3.....	406
13.5	Conclusion	410
	References	411
Chapter 14	Direction of Arrival Estimation by Exploiting Unitary Transform in the Matrix Pencil Method and Its Comparison with ESPRIT	413
14.0	Summary.....	413
14.1	Introduction	413
14.2	The Unitary Transform	415
14.3	1-D Unitary Matrix Pencil Method Revisited.....	416
14.4	Summary of the 1-D Unitary Matrix Pencil Method	419
14.5	The 2-D Unitary Matrix Pencil Method.....	419
14.5.1	Pole Pairing for the 2-D Unitary Matrix Pencil Method	425
14.5.2	Computational Complexity	426
14.5.3	Summary of the 2-D Unitary Matrix Pencil Method	426
14.6	Simulation Results Related to the 2-D Unitary Matrix Pencil Method.....	427
14.7	The ESPRIT Method	430
14.8	Multiple Snapshot-Based Matrix Pencil Method.....	432
14.9	Comparison of Accuracy and Efficiency Between ESPRIT and the Matrix Pencil Method	432
14.10	Conclusion	435
	References	436
Chapter 15	DOA Estimation Using Electrically Small Matched Dipole Antennas and the Associated Cramer-Rao Bound	439
15.0	Summary.....	439
15.1	Introduction	440
15.2	DOA Estimation Using a Realistic Antenna Array.....	441
15.2.1	Transformation Matrix Technique.....	441

15.3	Cramer-Rao Bound for DOA Estimation	444
15.4	DOA Estimation Using 0.1λ Long Antennas.....	445
15.5	DOA Estimation Using Different Antenna Array Configurations	448
15.6	Conclusion	461
	References	462
Chapter 16	Non-Conventional Least Squares Optimization for DOA Estimation Using Arbitrary-Shaped Antenna Arrays	463
16.0	Summary.....	463
16.1	Introduction	463
16.2	Signal Modeling.....	464
16.3	DFT-Based DOA Estimation.....	465
16.4	Non-conventional Least Squares Optimization	466
16.5	Simulation Results	467
16.5.1	An Array of Linear Uniformly Spaced Dipoles.....	468
16.5.2	An Array of Linear Non-uniformly Spaced Dipoles	470
16.5.3	An Array Consisting of Mixed Antenna Elements	471
16.5.4	An Antenna Array Operating in the Presence of Near-Field Scatterers	472
16.5.5	Sensitivity of the Procedure Due to a Small Change in the Operating Environment	473
16.5.6	Sensitivity of the Procedure Due to a Large Change in the Operating Environment	474
16.5.7	An Array of Monopoles Mounted Underneath an Aircraft	476
16.5.8	A Non-uniformly Spaced Nonplanar Array of Monopoles Mounted Under an Aircraft	477
16.6	Conclusion	479
	References	479
Chapter 17	Broadband Direction of Arrival Estimations Using the Matrix Pencil Method	481
17.0	Summary.....	481
17.1	Introduction	481
17.2	Brief Overview of the Matrix Pencil Method	482
17.3	Problem Formulation for Simultaneous Estimation of DOA and the Frequency of the Signal	488
17.4	Cramer-Rao Bound for the Direction of Arrival and Frequency of the Signal.....	494
17.5	Example Using Isotropic Point Sources	505
17.6	Example Using Realistic Antenna Elements	512

17.7	Conclusion	521
	References	521
Chapter 18	ADAPTIVE PROCESSING OF BROADBAND SIGNALS	523
18.0	Summary	523
18.1	Introduction	523
18.2	Formulation of a Direct Data Domain Least Squares Method for Adaptive Processing of Finite Bandwidth Signals Having Different Frequencies	524
18.2.1	Forward Method for Adaptive Processing of Broadband Signals	524
18.2.2	Backward Method	529
18.2.3	Forward-Backward Method	529
18.3	Numerical Simulation Results	530
18.4	Conclusion	535
	References	535
Chapter 19	Effect of Random Antenna Position Errors on a Direct Data Domain Least Squares Approach for Space-Time Adaptive Processing	537
19.0	Summary	537
19.1	Introduction	537
19.2	EIRP Degradation of Array Antennas Due to Random Position Errors	540
19.3	Example of EIRP Degradation in Antenna Arrays	544
19.4	Simulation Results	547
19.5	Conclusion	551
	References	551
Index	.	553
