<i>Preface</i>	xi

Magnetostatic Waves

J. D. Adam, M. R. Daniel, P. R. Emtage, and S. H. Talisa

I. Introduction	2
II. Magnetic Materials for Magnetostatic Waves	7
A. Magnetic Materials	7
B. Growth of YIG Films	10
C. YIG Film Evaluation	18
III. Magnetostatic Propagation and Generation	25
A. Propagation in an Isolated Ferrite Layer	25
B. More Complex Systems	35
C. Generation of Magnetostatic Waves	40
IV. Applications of Magnetostatic Wave Devices	52
A. Broad-Band Receiver Applications	52
B. Magnetostatic Wave Delay Lines for Phased-Array Antennas	61
C. Simple Delay-Line Applications Using Magnetostatic Waves	67
D. Nonlinear Devices	68
V. Linear Devices	70
A. Wide-Band Devices—Delay Lines	71
B. Resonators, Oscillators, and Filters	81
VI. Nonlinear Devices	92
A. Coupling to Half-Frequency Spin Waves	92
B. High-Power Devices	95
VII. Magneto-optic Interactions and Devices	102
A. Scattering: General Considerations	102
B. Applications of Magnetostatic Wave Interactions with Light	111
VIII. Conclusions	124
Acknowledgments	125
Appendix A. Infinite Magnetic Medium	125
Appendix B. Magnetic Anisotropy and Surface Waves	129
Appendix C. Calculation from Surface Permeability	132
Appendix D. Thickness Modes and Boundary Conditions	134
References	136

Thin-Film Rare Earth-Transition Metal Alloys for Magneto optic Recording

Brent S. Krusor and G. A. N. Connell

I.	Introduction	143
II.	Materials Preparation and Properties	147
	A. Preparation of Transition-Metal Rich Alloys	148
	B. Structural Properties of Transition-Metal Rich Alloys	155
	C. Oxidation and Aging Properties	168
III.	Magnetic and Magneto optic Properties	174
	A. Magnetization, Magnetic Moment, and Exchange	174
	B. Coercivity, Magnetic Anisotropy, and Domain Formation	183
	C. Magneto optic Properties	190
IV.	Application to Magneto optic Recording	200
	A. Magneto optic Medium Design	201
	B. Recording Characteristics and Medium Noise.	209
V.	Summary	213
	References	214

New Quantum Structures

D. D. Coon and K. M. S. V. Bandara

I.	Introduction and Background	219
II.	Electronic States in Quantum Wells and Superlattices	221
	A. Energy Levels in Quantum Wells and Superlattices.	222
	B. Corrections to Standard Models	225
	C. Density of States Considerations	227
	D. Wigner-Eisenbud Time Delay	228
III.	Intersubband Transitions, Infrared Absorption, and Infrared Detection	229
	A. Dark-Current Mechanisms	236
	B. Noise, Detectivity, Responsivity, and Uniformity.	238
	C. Intraband vs. Interband Transitions	238
	D. Exchange Interactions	239
IV.	Resonant Tunneling and Device Applications	244
	A. Application to Fast Logic and High-Frequency Oscillators	245
	B. Intrinsic Bistability	249
	C. Theoretical Approaches to Resonant Tunneling	252
V.	Trends and Possibilities	258
	Acknowledgments	260
	References	260

Fourier Transform Infrared Analysis of Thin Films

D. M. Back

I. Introduction	265
II. Theory of Infrared Absorption.	266
A. Source of Infrared Absorption	266
B. Description of Infrared Absorption Bands	267
C. Symmetry in Infrared Absorption	268
D. Infrared Spectra of Amorphous Solids	268
III. Instrumentation	269
A. Fourier Transform Spectrometers	269
B. FTIR vs. Dispersive Infrared Spectrometers	271
C. Techniques of Infrared Analysis.	271
IV. Applications to Thin Film Analysis—Specific Systems	277
A. Amorphous Silicon Films	277
B. Miscellaneous a-Si:H Alloys	283
C. Silicon Oxide Films	287
D. Silicon Nitride Films	291
E. Silicon Oxynitride Films	295
F. Silicate Glass Films	299
G. Aluminum Oxide Films	303
H. Nickel Oxide Films	304
I. Carbon Films	305
J. Detection of Carbon Impurities	308
V. Summary	309
References	309
<i>Author Index</i>	313
<i>Subject Index</i>	325
