Contents

List of boxes and tables	viii
Preface	ix
Acknowledgements	x
Abbreviations	xii
1 The role of the cell wall in the life of the plant	1
Summary	3
Further reading	3
2 The molecular components of the wall	4
2.1 The layered structure of the wall	4
2.2 The microfibrillar phase: cellulose	7
2.3 The matrix phase: introduction	18
2.4 Extraction and classification of matrix polysaccharides	25
2.5 Pectic polysaccharides	26
2.6 Hemicelluloses	32
2.7 Proteins and glycoproteins	37
2.8 Lignin and other phenolic compounds	39
Summary	42
References	42
Further reading	43
3 Cell wall architecture and the skeletal role of the cell wall	44
3.1 Wall types	44
3.2 Cross-links between wall polymers	46
3.3 The cell wall as a set of interlinked networks	51
3.4 Distribution of polymers within the wall	59
3.5 Chemical and physical properties of the whole cell wall	59
3.6 Mechanical strength as a specialized property of certain cells	64
Summary	73
References	73
Further reading	74
4 Cell wall formation	75
4.1 Stages of wall formation	75
4.2 Biochemical pathways of wall polysaccharide formation	77
4.3 Biochemical pathways of wall protein formation	88
4.4 Biochemical pathways of lignin formation	89

4.5	Sites of formation of cell wall polymers	91
4.6	Control of wall formation	102
	Summary	109
	References	109
	Further reading	111
5	The cell wall and control of cell growth	112
5.1	Relationship between wall properties and turgor in cell extension	112
5.2	The physical properties of the isolated cell wall under tension	114
5.3	Physical properties of the cell wall during extension <i>in vivo</i>	122
5.4	Control of wall extensibility	127
5.5	Chemistry and biochemistry of cell extension	135
5.6	Tissue tension	146
5.7	Environmental influences	147
	Summary	148
	References	148
	Further reading	150
6	The cell wall and intercellular transport	151
6.1	Symplastic and apoplastic transport	151
6.2	Adaptations for impermeability	152
6.3	Special adaptations for transport	157
	Summary	172
	Further reading	172
7	The cell wall and interactions with other organisms	173
7.1	Pathogens and potential pathogens	173
7.2	Predators	186
7.3	Nodulation and nitrogen fixation	187
7.4	Graft unions	190
	Summary	190
	References	190
	Further reading	191
8	The cell wall and reproduction	192
8.1	Pollen mother cells	192
8.2	Pollen grain walls	192
8.3	Pollen–stigma interactions	197
8.4	The pollen tube	199
8.5	Cell wall food reserves in seeds	199
	Summary	204
	Reference	204
	Further reading	204

9	Cell wall degradation and biotechnological applications	206
9.1	Mobilization of food reserves in seeds	206
9.2	Abscission	208
9.3	Fruit ripening	210
9.4	Degradation by microorganisms	215
9.5	Protoplast formation and use	218
9.6	Technological applications	220
	Summary	220
	References	220
	Further reading	221
10	Cell walls in diet and health	222
10.1	Cell walls as determinants of food mechanical properties (texture)	222
10.2	Cell walls as a source of dietary fibre	231
10.3	Bioactive cell wall and related components as protective factors in herbal products	235
	Summary	237
	References	237
	Further reading	237
11	Outstanding problems for future research	239
	Summary	240
	Glossary	241
	Index	247
