Principles and Applications of Nonlinear Optical Materials

Edited by

R. W. MUNN
Department of Chemistry
UMIST
Manchester

and

C. N. IRONSIDE
Department of Electronics and Electrical Engineering
University of Glasgow

BLACKIE ACADEMIC & PROFESSIONAL
An Imprint of Chapman & Hall
London · Glasgow · New York · Tokyo · Melbourne · Madras

Published in the USA and Canada by CRC Press Inc.
Boca Raton, Florida

Contents

1 Introduction 1
R. W. MUNN and C. N. IRONSIDE

2 Nonlinear optical phenomena 5
R. W. MUNN

2.1 General description 5
2.2 Harmonic generation 8
2.3 Electro-optic effects 11
2.4 Intensity-dependent refractive index 13
2.5 Frequency mixing 15
2.6 Units and dimensions 17
References 19

3 Nonlinear optical devices 20
C. N. IRONSIDE

3.1 Introduction 20
3.2 Devices based on second-order effects 21
3.2.1 Second-harmonic generation 21
3.3 Devices based on third-order effects 25
3.3.1 Soliton transmission 26
3.3.2 All-optical switching devices 28
3.4 Conclusion 33
References 33

4 Optical nonlinear effects in semiconductors 35
C. N. IRONSIDE

4.1 Introduction 35
4.2 Linear optical properties of semiconductors 37
4.2.1 Interband absorption 38
4.2.2 Excitonic absorption 41
4.3 Nonresonant third-order nonlinear optical effects 43
4.3.1 Measurement of third-order optical nonlinearities in semiconductors 47
4.4 All-optical switching devices employing optical nonlinearities in semiconductors 51
4.5 Resonant optical nonlinearities 52
4.6 Low-dimensional semiconductors 56
4.7 Carrier confinement 58
4.8 Two-dimensional density of states 61
4.8.1 Excitons in 2D confined semiconductors 63
4.9 Nonlinear optical effects in low-dimensional semiconductors 64
4.10 Second-order optical nonlinearities in semiconductors 68
4.11 Conclusion 72
References 73

5 Nonlinear glasses **76**
J. S. AITCHISON

5.1 Introduction 76
5.2 Origins of the nonlinearity in glasses 77
5.2.1 Resonant nonlinearities 77
5.2.2 Two-photon absorption 80
5.2.3 Nonresonant nonlinearities 80
5.2.4 Photo-refractive glasses 84
5.2.5 Second-harmonic generation 85
5.3 Applications of nonlinear glasses 86
5.3.1 Optical pulse compression 88
5.3.2 Temporal solitons 90
5.3.3 All-optical switching 91
5.4 Conclusions 95
References 96

6 Novel nonlinear crystals **99**
M. EBRAHIMZADEH and A. I. FERGUSON

6.1 Introduction 99
6.2 Nonlinear background 100
6.2.1 Wave propagation in nonlinear media 101
6.2.2 Wave equation for three-wave mixing 102
6.2.3 Effects of phase-mismatch on nonlinear interactions 104
6.2.4 Phase-matching 105
6.2.5 Double refraction in crystals 110
6.2.6 The nonlinear susceptibility tensor and its symmetry 112
6.3 Nonlinear materials 117
6.3.1 General requirements 118
6.3.2 Urea 120
6.3.3 Barium borate 122
6.3.4 Potassium titanyl phosphate 127
6.3.5 Lithium triborate 131
6.3.6 Other nonlinear materials 137
References 138

7 Molecular crystals **143**
R. T. BAILEY, F. R. CRUICKSHANK, P. J. HALFPENNY, D. PUGH, J. N. SHERWOOD and G. S. SIMPSON

7.1 Molecular polarizability and hyperpolarizability 143
7.2 Unsaturated organic molecules: intramolecular charge-transfer complexes 147
7.3 Measurement of molecular hyperpolarizabilities 152
7.4 Nonlinear optics of the crystal lattice 154
7.5 Characterization of second-order optically nonlinear organic crystals 155
7.6 Typical nonlinear organic crystals 162
7.6.1 3-Nitroaniline 162
7.6.2 2-Methyl-4-nitroaniline 163
7.6.3 3-Methyl-4-nitropyridine-N-oxide 163
7.6.4 (−)-2-α-Methylbenzylamino-5-nitropyridine 163
7.6.5 4-N,N-Dimethylamino-3-acetomidonitrobenzene 166
7.6.6 4-Nitro-4′-methylbenzylideneaniline 167
7.7 Purification of organic nonlinear optical materials 170
7.8 Crystal growth 171
7.8.1 Melt growth 172

7.8.2 Growth from solution 175
7.8.3 Vapour growth 177
7.9 Structural assessment 178
7.9.1 Defect etching 179
7.9.2 X-ray diffraction topography 180
7.10 Organic crystals in waveguide device formats 182
7.10.1 Thin-film waveguides 182
7.10.2 Crystal-cored fibre 183
7.10.3 Organic channel waveguides 184
7.11 Conclusions 185
References 185

8 Polymers **189**
G. H. CROSS

8.1 Chemistry and general properties 190
8.1.1 Synthesis 191
8.1.2 Structure and phase transitions 192
8.2 Nonlinear optical effects 193
8.2.1 Second-order effects 194
8.2.2 Third-order effects 206
8.3 Applications 219
8.3.1 Slab waveguides 220
8.3.2 Channel confinement 220
8.3.3 Figures of merit and polymers 221
References 223

9 Langmuir–Blodgett films **226**
P. HODGE and N. B. McKEOWN

9.1 Synthesis, characterization and properties of Langmuir–Blodgett film materials 226
9.1.1 Preparation 226
9.1.2 Characterization 232
9.1.3 Properties 234
9.2 Nonlinear optical properties 239
9.2.1 Second-harmonic generation 239
9.2.2 Third-harmonic generation 245
9.3 Future prospects 246
References 247
