Preface		xi
Foreword – *Zev Naveh*		xiii
1	**Introduction to landscape ecology**	**1**
1.1	Introduction	1
1.2	Contribution of different disciplines	1
1.3	Definitions of landscape	2
1.4	Three views of landscape ecology	3
1.5	Spacing – the perception of the landscape	7
1.6	Behavioural ecology and landscape ecology	10
1.7	Structuring the landscape	11
1.8	Principles of landscape classification	11
1.9	Summary	17
	Suggested reading	17
	References	18
2	**Theories and models incorporated into the landscape ecology framework**	**23**
2.1	Introduction	23
2.2	Hierarchy theory and the structure of the landscape	23
2.3	Percolation theory	26
2.4	The metapopulation	28
2.5	The systems source–sink	30
2.6	Summary	32
	Suggested reading	33
	References	33
3	**Scaling patterns and processes across landscapes**	**35**
3.1	Introduction	35
3.2	Moving across scales	35
3.3	Definitions	36
3.4	Scaling the landscape	36
3.5	Change of scale perception	37
3.6	The multiscale option	38
3.7	Importance of the parameters at the different scales	40
3.8	Grain size and scaling	40
3.9	Assessing landscape scale of analysis	40
3.10	Examples of scales in landscape and in ecologically related disciplines	41
3.11	Summary	45
	Suggested reading	48
	References	48

4	**Emerging processes in the landscape**	**51**
4.1	Introduction	51
4.2	Disturbance	51
4.3	Fragmentation	58
4.4	Connectivity, connectedness and corridors	68
4.5	Soil landscape and movement of water and nutrients across landscapes	71
	Suggested reading	79
	References	81
5	**Emerging patterns in the landscape**	**85**
5.1	Introduction	85
5.2	Landscape heterogeneity	85
5.3	Ecotones	93
	Suggested reading	108
	References	108
6	**Principles of landscape dynamics**	**113**
6.1	Introduction	113
6.2	Stability in landscapes	114
6.3	Self-organizing mechanisms and landscapes	115
6.4	Landscape shaping factors	115
6.5	Changes in human-perturbed landscapes	115
6.6	Patterns of landscape change: examples	117
6.7	Mediterranean landscapes as an example of perturbation-dependent homeorethic systems	119
6.8	Patterns and processes in land abandonment	121
6.9	Summary	126
	Suggested reading	126
	References	126
7	**Principles of landscape conservation, management and design**	**129**
7.1	Introduction	129
7.2	Landscape evaluation	130
7.3	The cultural landscape	130
7.4	Principles of landscape management	130
7.5	Nature conservation and landscape ecology	134
7.6	Conservation in landscape	138
7.7	Landscape design (creation) and restoration	146
7.8	Hierarchical structure of the system and conservation of biodiversity	147
7.9	Summary	148
	Suggested reading	149
	References	150
8	**Methods in landscape ecology**	**153**
8.1	Introduction	153
8.2	Numerical and spatial data processing	153
8.3	The fractal geometry approach	171

8.4	Geographic information systems	180
8.5	Remote sensing in landscape ecology	194
8.6	Global positioning systems (GPS)	203
8.7	Spatially explicit population models (SEPM) to describe population patterns in a landscape	208
	Suggested reading	214
	References	214
