# Contents

<b>1 INTRODUCTION</b>	<b>1</b>
The basic photomechanical processes. Photomechanical versus photographic color reproduction. Types of originals. Outline of color printing processes.	
<b>2 ELEMENTARY PRINCIPLES OF COLOR</b>	<b>12</b>
Sources of confusion. Three-color vision. Light absorption, transmission and reflection by colored objects. Relation of color to absorption. Color description and measurement. The Munsell system. Spectrophotometric curves. The CIE system. Metamerism. Color measurement in the graphic arts.	
<b>3 ELEMENTARY PRINCIPLES OF COLOR REPRODUCTION</b>	<b>29</b>
Properties of colored inks. Light absorption and dot area. Inaccuracies of simple color reproduction processes. Unwanted absorptions. Colored line work.	
<b>4 MASKING METHODS</b>	<b>41</b>
Methods of color correction. Principles of masking. Mask percentages. Balanced inks. Classification of masking methods. Negative, positive, and two-stage masks. Integral masks. Tone-correction masks. Unsharp masks. Substitutes for masking.	
<b>5 TONE REPRODUCTION AND COLOR BALANCE</b>	<b>84</b>
Black-and-white tone reproduction. Continuous-tone and half-tone images. Tone-reproduction graphs. Gray balance in color printing. Equivalent neutral density. Nonreproducible originals. Tone reproduction of nonneutral colors.	

<b>6</b>	<b>SPECTRAL SENSITIVITIES FOR COLOR SEPARATION</b>	<b>121</b>
	Light source, color filter, and photographic emulsion. Color-separation efficiency. Masking efficiency. Colorimetric quality factor. Choice of color-separation filters.	
<b>7</b>	<b>INKS AND PAPER</b>	<b>151</b>
	Optics of the ink film. First-surface reflection. Multiple internal reflection. Evaluation of ink color. Density measurement. The Preucil System. Spectrophotometric curves. The CIE system. Transformations of the CIE system. The Munsell system. Colors of maximum efficiency. The Munsell inefficiency system. Color strength. Color gamut. Color of paper. Pigments used in printing inks.	
<b>8</b>	<b>ADDITIVITY AND PROPORTIONALITY OF DENSITIES</b>	<b>205</b>
	Additivity and proportionality rules. Proportionality of densities in halftone and continuous-tone images. Multiple internal reflections. Additivity failure due to first-surface reflection, opacity, trapping and back-transfer, spectral characteristics, halftone structure, light scattering in the paper.	
<b>9</b>	<b>GRAPHICAL ANALYSIS OF COLOR CORRECTION</b>	<b>233</b>
	Actinic densities. Color-correction graphs. Estimation of masking requirements. Two-stage masking. Split-filter exposures. Tone reproduction and masking.	
<b>10</b>	<b>MATHEMATICAL ANALYSIS OF COLOR CORRECTION</b>	<b>255</b>
	Basic methods. The Neugebauer equations. The masking equations. Metameric colors. Color filters for masks. Single masks. MacAdam's theory. The least squares method. Reproduction of specifically chosen colors. Color differentiation theory.	
<b>11</b>	<b>FOUR-COLOR PRINTING AND THE BLACK PRINTER</b>	<b>282</b>
	Need for a black printer. Tone reproduction. Color correction of the black printer. Undercolor removal. Other four- and five-color systems.	
<b>12</b>	<b>COLOR SCANNERS</b>	<b>305</b>
	History. Basic types of scanner. Mathematical functions carried out by the electronic computer. Relation to masking. Enhancement of detail.	

CONTENTS	xiii
13 MOIRÉ PATTERNS	328
Screen angles. First-order moiré patterns. Reflectance relationships. Second-order moiré patterns.	
APPENDIX	
A Tables	347
B Calculation of tristimulus values	355
C Calculation of colorimetric quality factor	359
D Calculation of selected ordinates	367
E The Neugebauer Equations	371
F Construction and use of spectroscope	381
