CONTENTS

CHAPTER 1

OVERVIEW AND HISTORICAL PERSPECTIVES 1

- 1.1 The Block Diagram of a Communication System 3
- 1.2 Channel Characteristics 5
 - 1.2.1 Noise Sources 5
 - 1.2.2 Types of Transmission Channels 6
- 1.3 Summary of Systems Analysis Techniques 13
 - 1.3.1 Time-Domain and Frequency-Domain Analyses 13
 - 1.3.2 Modulation and Communication Theories 13
- 1.4 Probabilistic Approaches to System Optimization 14
 - 1.4.1 Statistical Signal Detection and Estimation Theory 14
 - 1.4.2 Information Theory and Coding 15
 - 1.4.3 Recent Advances 15
- 1.5 Preview of This Book 16
- Further Reading 16

CHAPTER 2

FUNDAMENTALS OF SIGNAL AND SYSTEM ANALYSIS 17

- 2.1 Signal Models 17
 - 2.1.1 Deterministic and Random Signals 17
 - 2.1.2 Periodic and Aperiodic Signals 18

- 2.1.3 Phasor Signals and Spectra 18
- 2.1.4 Singularity Functions 21
- 2.2 Signal Classifications 23
- 2.3 Generalized Fourier Series 25
- 2.4 Fourier Series 28
 - 2.4.1 Complex Exponential Fourier Series 28
 - 2.4.2 Symmetry Properties of the Fourier Coefficients 29
 - 2.4.3 Trigonometric Form of the Fourier Series 30
 - 2.4.4 Parseval's Theorem 31
 - 2.4.5 Examples of Fourier Series 31
 - 2.4.6 Line Spectra 33
- 2.5 The Fourier Transform 37
 - 2.5.1 Amplitude and Phase Spectra 37
 - 2.5.2 Symmetry Properties 38
 - 2.5.3 Energy Spectral Density 39
 - 2.5.4 Convolution 40
 - 2.5.5 Transform Theorems: Proofs and Applications 41
 - 2.5.6 Fourier Transforms of Periodic Signals 50
 - 2.5.7 Poisson Sum Formula 51
- 2.6 Power Spectral Density and Correlation 51
 - 2.6.1 The Time-Average Autocorrelation Function 52
 - 2.6.2 Properties of $R(\tau)$ 53
- 2.7 Signals and Linear Systems 56
 - 2.7.1 Definition of a Linear Time-Invariant System 56

2.7.2	Impulse Response and the Superposition Integral	57	3.1.4	Vestigial-Sideband Modulation	129
2.7.3	Stability	58	3.1.5	Frequency Translation and Mixing	133
2.7.4	Transfer (Frequency Response) Function	58	3.2	Angle Modulation 136	
2.7.5	Causality	59	3.2.1	Narrowband Angle Modulation	138
2.7.6	Symmetry Properties of $H(f)$	59	3.2.2	Spectrum of an Angle-Modulated Signal	141
2.7.7	Input-Output Relationships for Spectral Densities	62	3.2.3	Power in an Angle-Modulated Signal	147
2.7.8	Response to Periodic Inputs	62	3.2.4	Bandwidth of Angle-Modulated Signals	147
2.7.9	Distortionless Transmission	64	3.2.5	Narrowband-to-Wideband Conversion	152
2.7.10	Group and Phase Delay	65	3.2.6	Demodulation of Angle-Modulated Signals	154
2.7.11	Nonlinear Distortion	67	3.3	Interference 159	
2.7.12	Ideal Filters	68	3.3.1	Interference in Linear Modulation	159
2.7.13	Approximation of Ideal Lowpass Filters by Realizable Filters	70	3.3.2	Interference in Angle Modulation	162
2.7.14	Relationship of Pulse Resolution and Risetime to Bandwidth	74	3.4	Feedback Demodulators: The Phase-Locked Loop 167	
2.8	Sampling Theory 78		3.4.1	Phase-Locked Loops for FM and PM Demodulation	167
2.9	The Hilbert Transform 82		3.4.2	Phase-Locked Loop Operation in the Tracking Mode: The Linear Model	170
2.9.1	Definition	82	3.4.3	Phase-Locked Loop Operation in the Acquisition Mode	176
2.9.2	Properties	83	3.4.4	Costas PLLs	180
2.9.3	Analytic Signals	85	3.4.5	Frequency Multiplication and Frequency Division	181
2.9.4	Complex Envelope Representation of Bandpass Signals	87	3.5	Analog Pulse Modulation 182	
2.9.5	Complex Envelope Representation of Bandpass Systems	89	3.5.1	Pulse-Amplitude Modulation	183
2.10	Discrete Fourier Transform and Fast Fourier Transform 91		3.5.2	Pulse-Width Modulation (PWM)	184
Summary	95		3.5.3	Pulse-Position Modulation (PPM)	186
Further Reading	99		3.6	Delta Modulation and PCM 187	
Problems	100		3.6.1	Delta Modulation	187
Computer Exercises	110	/	3.6.2	Pulse-Code Modulation	190

CHAPTER 3
MODULATION TECHNIQUES WITH EMPHASIS ON ANALOG SYSTEMS 111

3.1	Linear Modulation 112	
3.1.1	Double-Sideband Modulation	112
3.1.2	Amplitude Modulation	115
3.1.3	Single-Sideband Modulation	121

3.7 Multiplexing 191	
3.7.1 Frequency-Division Multiplexing 192	
3.7.2 Example of FDM: Stereophonic FM Broadcasting 193	
3.7.3 Quadrature Multiplexing 193	
3.7.4 Time-Division Multiplexing 195	
3.7.5 An Example: The Digital Telephone System 197	
3.7.6 Comparison of Multiplexing Schemes 198	

Summary 198

Further Reading 202

Problems 202

Computer Exercises 208

CHAPTER 4
BASEBAND COMMUNICATION SYSTEMS IN THE ABSENCE OF NOISE 210

4.1 Baseband Digital Data Transmission Systems 210	
4.2 Line Codes and Their Power Spectra 211	
4.2.1 Description of Line Codes 211	
4.2.2 Power Spectra for Line Coded Data 213	
4.3 Effects of Filtering of Digital Data: ISI 220	
4.4 Pulse Shaping: Nyquist's Criterion for Zero ISI 222	
4.4.1 Pulses Having the Zero-ISI Property 222	
4.4.2 Nyquist's Pulse Shaping Criterion 225	
4.4.3 Transmitter and Receiver Filters for Zero ISI 226	
4.5 Zero-Forcing Equalization 228	
4.6 Eye Diagrams 232	
4.7 Synchronization 234	
4.8 Carrier Modulation of Baseband Digital Signals 238	

Summary 239	
Further Reading 240	
Problems 241	
Computer Exercises 243	

CHAPTER 5
A BRIEF REVIEW OF PROBABILITY THEORY 244

5.1 What is Probability? 244	
5.1.1 Equally Likely Outcomes 244	
5.1.2 Relative Frequency 245	
5.1.3 Sample Spaces and the Axioms of Probability 245	
5.1.4 Venn Diagrams 247	
5.1.5 Some Useful Probability Relationships 247	
5.1.6 Tree Diagrams 250	
5.1.7 Some More General Relationships 251	
5.2 Random Variables and Related Functions 254	
5.2.1 Random Variables 254	
5.2.2 Probability (Cumulative) Distribution Functions 254	
5.2.3 Probability Density Function 256	
5.2.4 Joint cdfs and pdfs 259	
5.2.5 Transformation of Random Variables 263	
5.3 Statistical Averages 268	
5.3.1 Average of a Discrete Random Variable 268	
5.3.2 Average of a Continuous Random Variable 268	
5.3.3 Average of a Function of a Random Variable 269	
5.3.4 Average of a Function of More Than One Random Variable 271	
5.3.5 Variance of a Random Variable 272	
5.3.6 Average of a Linear Combination of N Random Variables 273	

5.3.7	Variance of a Linear Combination of Independent Random Variables	274	6.2.5	Meanings of Various Averages for Ergodic Processes	308
5.3.8	Another Special Average: The Characteristic Function	275	6.3	Correlation and Power Spectral Density	309
5.3.9	The pdf of the Sum of Two Independent Random Variables	276	6.3.1	Power Spectral Density	309
5.3.10	Covariance and the Correlation Coefficient	278	6.3.2	The Wiener-Kinchine Theorem	311
5.4	Some Useful pdfs	279	6.3.3	Properties of the Autocorrelation Function	313
5.4.1	Binomial Distribution	279	6.3.4	Autocorrelation Functions for Random Pulse Trains	314
5.4.2	Laplace Approximation to the Binomial Distribution	282	6.3.5	Cross-Correlation Function and Cross-Power Spectral Density	316
5.4.3	Poisson Distribution and Poisson Approximation to the Binomial Distribution	282	6.4	Linear Systems and Random Processes	317
5.4.4	Geometric Distribution	284	6.4.1	Input-Output Relationships	317
5.4.5	Gaussian Distribution	284	6.4.2	Filtered Gaussian Processes	320
5.4.6	Gaussian Q -Function	288	6.4.3	Noise-Equivalent Bandwidth	322
5.4.7	Chebyshev's Inequality	289	6.5	Narrowband Noise	325
5.4.8	Collection of Probability Functions and Their Means and Variances	289	6.5.1	Quadrature-Component and Envelope-Phase Representation	325
Summary	290		6.5.2	The Power Spectral Density Function of $n_c(t)$ and $n_s(t)$	327
Further Reading	293		6.5.3	Ricean Probability Density Function	329
Problems	294		Summary	331	
Computer Exercises	299		Further Reading	334	
			Problems	334	
			Computer Exercises	339	

CHAPTER 6

STOCHASTIC PROCESSES 301

6.1	A Relative-Frequency Description of Random Processes	301
6.2	Some Terminology of Random Processes	302
6.2.1	Sample Functions and Ensembles	302
6.2.2	Description of Random Processes in Terms of Joint pdfs	303
6.2.3	Stationarity	304
6.2.4	Partial Description of Random Processes: Ergodicity	304

CHAPTER 7

NOISE EFFECTS IN SIMPLE MODULATION SYSTEMS 341

7.1	Signal-to-Noise Ratios	342
7.1.1	Baseband Systems	342
7.1.2	Double-Sideband Systems	343
7.1.3	Single-Sideband Systems	345
7.1.4	Amplitude Modulation Systems	347
7.2	Noise and Phase Errors in Coherent Systems	353

7.3 Noise in Angle Modulation	357	8.3 Modulation Schemes Not Requiring Coherent References	408
7.3.1 The Effect of Noise on the Receiver Input	357	8.3.1 Differential Phase-Shift Keying (DPSK)	409
7.3.2 Demodulation of PM	359	8.3.2 Noncoherent FSK	417
7.3.3 Demodulation of FM: Above Threshold Operation	360	8.4 M-ary PAM	418
7.3.4 Performance Enhancement Through the Use of De-emphasis	362	8.5 Comparison of Digital Modulation Systems	423
7.4 Threshold Effect in FM Demodulation	363	8.6 Performance of Zero-ISI Digital Data Systems	426
7.4.1 Threshold Effects in FM Demodulators	363	8.7 Multipath Interference	431
7.5 Noise in Pulse-Code Modulation	371	8.8 Flat Fading Channels	437
7.5.1 Postdetection SNR	371	8.9 Equalization	441
7.5.2 Companding	375	8.9.1 Equalization by Zero-Forcing	442
Summary	376	8.9.2 Equalization by Minimum Mean-Squared Error	446
Further Reading	378	8.9.3 Tap Weight Adjustment	449
Problems	379	Summary	450
Computer Exercises	382	Further Reading	453
CHAPTER 8		Problems	453
FUNDAMENTALS OF BASIC BINARY DIGITAL COMMUNICATION SYSTEMS	384	Computer Exercises	459

8.1 Baseband Data Transmission in White Gaussian Noise	386
8.2 Binary Data Transmission with Arbitrary Signal Shapes	391
8.2.1 Receiver Structure and Error Probability	392
8.2.2 The Matched Filter	394
8.2.3 Error Probability for the Matched-Filter Receiver	398
8.2.4 Correlator Implementation of the Matched-Filter Receiver	400
8.2.5 Optimum Threshold	401
8.2.6 Nonwhite (Colored) Noise Backgrounds	402
8.2.7 Receiver Implementation Imperfections	402
8.2.8 Error Probabilities for Coherent Binary Signaling	403

CHAPTER 9	
ADVANCED DIGITAL COMMUNICATIONS	460
9.1 M-ary Data Communications Systems	460
9.1.1 M-ary Schemes Based on Quadrature Multiplexing	460
9.1.2 OQPSK Systems	464
9.1.3 MSK Systems	465
9.1.4 M-ary Data Transmission in Terms of Signal Space	471
9.1.5 QPSK in Terms of Signal Space	474
9.1.6 M-ary Phase-Shift Keying	475
9.1.7 Quadrature-Amplitude Modulation	478
9.1.8 Coherent (FSK)	480
9.1.9 Noncoherent (FSK)	481
Summary	450
Further Reading	453
Problems	453
Computer Exercises	459

CHAPTER 9	
ADVANCED DIGITAL COMMUNICATIONS	460
9.1 M-ary Data Communications Systems	460
9.1.1 M-ary Schemes Based on Quadrature Multiplexing	460
9.1.2 OQPSK Systems	464
9.1.3 MSK Systems	465
9.1.4 M-ary Data Transmission in Terms of Signal Space	471
9.1.5 QPSK in Terms of Signal Space	474
9.1.6 M-ary Phase-Shift Keying	475
9.1.7 Quadrature-Amplitude Modulation	478
9.1.8 Coherent (FSK)	480
9.1.9 Noncoherent (FSK)	481

9.1.10	Differentially Coherent Phase-Shift Keying	485	9.7.1	Basic Principles of Cellular Radio	538
9.1.11	Bit-Error Probability from Symbol-Error Probability	486	9.7.2	Channel Perturbations in Cellular Radio	542
9.1.12	Comparison of M -ary Communications Systems on the Basis of Bit Error Probability	488	9.7.3	Characteristics of 1G and 2G Cellular Systems	543
9.1.13	Comparison of M -ary Communications Systems on the Basis of Bandwidth Efficiency	491	9.7.4	Characteristics of W-CDMA and cdma2000	544
9.2	Power Spectra for Quadrature Modulation Techniques	492	Summary 546		
9.3	Synchronization 499		Further Reading 549		
9.3.1	Carrier Synchronization	499	Problems 549		
9.3.2	Symbol Synchronization	502	Computer Exercises 553		
9.3.3	Word Synchronization	504			
9.3.4	Pseudo-Noise Sequences	507			
9.4	Spread-Spectrum Communication Systems 510		CHAPTER 10		
9.4.1	Direct-Sequence Spread Spectrum	512	THE APPLICATION OF DETECTION AND ESTIMATION THEORY TO COMMUNICATIONS 554		
9.4.2	Performance in Continuous-Wave (CW) Interference Environments	515	10.1	Bayes Optimization 554	
9.4.3	Performance in Multiple User Environments	516	10.1.1	Signal Detection Versus Estimation	554
9.4.4	Frequency-Hop Spread Spectrum	519	10.1.2	Optimization Criteria	555
9.4.5	Code Synchronization	520	10.1.3	Bayes Detectors	555
9.4.6	Conclusion	522	10.1.4	Performance of Bayes Detectors	559
9.5	Multicarrier Modulation and Orthogonal Frequency Division Multiplexing 522		10.1.5	The Neyman-Pearson Detector	562
9.6	Satellite Communications 526		10.1.6	Minimum Probability-of-Error Detectors	562
9.6.1	Antenna Coverage	528	10.1.7	The Maximum a Posteriori Detector	563
9.6.2	Earth Stations and Transmission Methods	530	10.1.8	Minimax Detectors	563
9.6.3	Link Analysis: Bent-Pipe Relay	532	10.1.9	The M -ary Hypothesis Case	563
9.6.4	Link Analysis: OBP Digital Transponder	535	10.1.10	Decisions Based on Vector Observations	564
9.7	Cellular Radio Communication Systems 537		10.2	Vector Space Representation of Signals 564	
			10.2.1	Structure of Signal Space	565
			10.2.2	Scalar Product	565
			10.2.3	Norm	566
			10.2.4	Schwarz's Inequality	566
			10.2.5	Scalar Product of Two Signals in Terms of Fourier Coefficients	567

10.2.6	Choice of Basis Function Sets: The Gram-Schmidt Procedure	569	11.2	Source Coding	617
10.2.7	Signal Dimensionality as a Function of Signal Duration	571	11.2.1	An Example of Source Coding	618
10.3	Maximum A Posteriori Receiver for Digital Data Transmission	573	11.2.2	Several Definitions	620
10.3.1	Decision Criteria for Coherent Systems in Terms of Signal Space	573	11.2.3	Entropy of an Extended Binary Source	621
10.3.2	Sufficient Statistics	578	11.2.4	Shannon-Fano Source Coding	622
10.3.3	Detection of M -ary Orthogonal Signals	579	11.2.5	Huffman Source Coding	623
10.3.4	A Noncoherent Case	581	11.3	Communication in Noisy Environments: Basic Ideas	624
10.4	Estimation Theory	585	11.4	Communication in Noisy Channels: Block Codes	626
10.4.1	Bayes Estimation	586	11.4.1	Hamming Distances and Error Correction	627
10.4.2	Maximum-Likelihood Estimation	588	11.4.2	Single-Parity-Check Codes	628
10.4.3	Estimates Based on Multiple Observations	589	11.4.3	Repetition Codes	629
10.4.4	Other Properties of ML Estimates	591	11.4.4	Parity-Check Codes for Single Error Correction	630
10.4.5	Asymptotic Qualities of ML Estimates	592	11.4.5	Hamming Codes	634
10.5	Applications of Estimation Theory to Communications	592	11.4.6	Cyclic Codes	635
10.5.1	Pulse-Amplitude Modulation	593	11.4.7	Performance Comparison Techniques	638
10.5.2	Estimation of Signal Phase: The PLL Revisited	594	11.4.8	Block Code Examples	640
Summary	597	11.5	Communication in Noisy Channels: Convolutional Codes	647	
Further Reading	598	11.5.1	Tree and Trellis Diagrams	648	
Problems	598	11.5.2	The Viterbi Algorithm	650	
Computer Exercises	605	11.5.3	Performance Comparisons for Convolutional Codes	653	
CHAPTER 11	SOURCE CODING AND ERROR CORRECTION TECHNIQUES	606	11.6	Communication in Noisy Channels: Other Techniques	657
11.1	Basic Concepts	607	11.6.1	Burst-Error-Correcting Codes	657
11.1.1	Information	607	11.6.2	Turbo Coding	659
11.1.2	Entropy	608	11.6.3	Feedback Channels	661
11.1.3	Discrete Channel Models	609	11.7	Modulation and Bandwidth Efficiency	665
11.1.4	Joint and Conditional Entropy	612	11.7.1	Bandwidth and SNR	665
11.1.5	Channel Capacity	613	11.7.2	Comparison of Modulation Systems	666

11.8 Bandwidth and Power Efficient Modulation (TCM)	668
Summary	672
Further Reading	675
Problems	675
Computer Exercises	679
APPENDIX A	
NOISE MODELING WITH APPLICATIONS TO COMMUNICATIONS	
681	
A.1 Physical Noise Sources	681
A.1.1 Thermal Noise	681
A.1.2 Nyquist's Formula	683
A.1.3 Shot Noise	684
A.1.4 Other Noise Sources	684
A.1.5 Available Power	685
A.1.6 Frequency Dependence	686
A.1.7 Quantum Noise	686
A.2 Characterization of Noise in Systems	687
A.2.1 Noise Figure of a System	687
A.2.2 Measurement of Noise Figure	689
A.2.3 Noise Temperature	691
A.2.4 Effective Noise Temperature	691
A.2.5 Cascade of Subsystems	692
A.2.6 Attenuator Noise Temperature and Noise Figure	694
A.3 Free-Space Propagation Example	695
A.4 Further Reading	698
A.5 Problems	699

APPENDIX B

MULTIVARIATE GAUSSIAN VARIABLES

701

B.1 The Probability Density Function	701
B.2 The Characteristic Function	701
B.3 Linear Transformations	702

APPENDIX C

THE NARROWBAND NOISE MODEL

703

APPENDIX D	
FM THRESHOLDING AND RELATED ANALYSES	706
D.1 The Zero-Crossing Problem	706
D.2 Average Rate of Zero Crossings	708
D.3 Problems	712

APPENDIX E

THE CHI-SQUARE RANDOM VARIABLE

713

APPENDIX F

USEFUL TABLES AND IDENTITIES

715

APPENDIX G

MATHEMATICAL AND NUMERICAL TABLES

719

G.1 The Gaussian <i>Q</i>-Function	719
G.2 Trigonometric Identities	721
G.3 Series Expansions	722
G.4 Integrals	722
G.4.1 Indefinite	722
G.4.2 Definite	723
G.5 Fourier Transform Pairs	724
G.6 Fourier Transform Theorems	725
