### Correction to: Sports Med

<https://doi.org/10.1007/s40279-018-0894-4>

Section 3, paragraph 3, sentence 1: The following sentence, which previously read:

“The recommended test to determine  $\dot{W}_{\max}$  (and the maximum rate of oxygen consumption  $\dot{V}O_{2\max}$ ) is a short (8–12 min) incremental exercise test (IET), where exercise intensity is increased continuously (e.g., 1 week every 2 s) or stepwise (e.g., 30 week every 1 min) [55] (Fig. 1).”

Should read:

“The recommended test to determine  $\dot{W}_{\max}$  (and the maximum rate of oxygen consumption  $\dot{V}O_{2\max}$ ) is a short (8–12 min) incremental exercise test (IET), where exercise intensity is increased continuously (e.g., 1 W every 2 s) or stepwise (e.g., 30 W every 1 min) [55] (Fig. 1).”

The original article has been updated.
