

Principles of Fourier Analysis

KENNETH B. HOWELL

*Department of Mathematical Sciences
University of Alabama in Huntsville*

CHAPMAN & HALL/CRC

Boca Raton · London · New York · Washington, D.C.

Contents

Preface	
Sample Courses	
I Preliminaries	1
1 The Starting Point	3
1.1 Fourier's Bold Conjecture	3
1.2 Mathematical Preliminaries and the Following Chapters	5
2 Basic Terminology, Notation, and Conventions	7
2.1 Numbers	7
2.2 Functions, Formulas, and Variables	8
2.3 Operators and Transforms	12
3 Basic Analysis I: Continuity and Smoothness	15
3.1 (Dis)Continuity	15
3.2 Differentiation	22
3.3 Basic Manipulations and Smoothness	25
3.4 Addenda	27
4 Basic Analysis II: Integration and Infinite Series	37
4.1 Integration	37
4.2 Infinite Series (Summations)	41
5 Symmetry and Periodicity	49
5.1 Even and Odd Functions	49
5.2 Periodic Functions	51
5.3 Sines and Cosines	53
6 Elementary Complex Analysis	57
6.1 Complex Numbers	57
6.2 Complex-Valued Functions	59
6.3 The Complex Exponential	61
6.4 Functions of a Complex Variable	65
7 Functions of Several Variables	73
7.1 Basic Extensions	73
7.2 Single Integrals of Functions with Two Variables	78
7.3 Double Integrals	83
7.4 Addendum	84

II	Fourier Series	93
8	Heuristic Derivation of the Fourier Series Formulas	95
8.1	The Frequencies	95
8.2	The Coefficients	96
8.3	Summary	98
9	The Trigonometric Fourier Series	101
9.1	Defining the Trigonometric Fourier Series	101
9.2	Computing the Fourier Coefficients	106
9.3	Partial Sums and Graphing	115
10	Fourier Series over Finite Intervals (Sine and Cosine Series)	121
10.1	The Basic Fourier Series	121
10.2	The Fourier Sine Series	123
10.3	The Fourier Cosine Series	125
10.4	Using These Series	126
11	Inner Products, Norms, and Orthogonality	129
11.1	Inner Products	129
11.2	The Norm of a Function	131
11.3	Orthogonal Sets of Functions	132
11.4	Orthogonal Function Expansions	134
11.5	The Schwarz Inequality for Inner Products	135
11.6	Bessel's Inequality	137
12	The Complex Exponential Fourier Series	143
12.1	Derivation	143
12.2	Notation and Terminology	145
12.3	Computing the Coefficients	147
12.4	Partial Sums	148
13	Convergence and Fourier's Conjecture	153
13.1	Pointwise Convergence	153
13.2	Uniform and Nonuniform Approximations	159
13.3	Convergence in Norm	167
13.4	The Sine and Cosine Series	171
14	Convergence and Fourier's Conjecture: The Proofs	177
14.1	Basic Theorem on Pointwise Convergence	177
14.2	Convergence for a Particular Saw Function	184
14.3	Convergence for Arbitrary Saw Functions	193
15	Derivatives and Integrals of Fourier Series	195
15.1	Differentiation of Fourier Series	195
15.2	Differentiability and Convergence	200
15.3	Integrating Periodic Functions and Fourier Series	204
15.4	Sine and Cosine Series	208
16	Applications	213
16.1	The Heat Flow Problem	213

16.2	The Vibrating String Problem	220
16.3	Functions Defined by Infinite Series	228
16.4	Verifying the Heat Flow Problem Solution	237
III	Classical Fourier Transforms	243
17	Heuristic Derivation of the Classical Fourier Transform	245
17.1	Riemann Sums over the Entire Real Line	245
17.2	The Derivation	247
17.3	Summary	249
18	Integrals on Infinite Intervals	251
18.1	Absolutely Integrable Functions	251
18.2	The Set of Absolutely Integrable Functions	255
18.3	Many Useful Facts	255
18.4	Functions with Two Variables	262
19	The Fourier Integral Transforms	273
19.1	Definitions, Notation, and Terminology	273
19.2	Near-Equivalence	275
19.3	Linearity	277
19.4	Invertibility	278
19.5	Other Integral Formulas (A Warning)	280
19.6	Some Properties of the Transformed Functions	281
20	Classical Fourier Transforms and Classically Transformable Functions	291
20.1	The First Extension	292
20.2	The Set of Classically Transformable Functions	296
20.3	The Complete Classical Fourier Transforms	298
20.4	What Is and Is Not Classically Transformable?	302
20.5	Duration, Bandwidth, and Two Important Sets of Classically Transformable Functions	304
20.6	More on Terminology, Notation, and Conventions	306
21	Some Elementary Identities: Translation, Scaling, and Conjugation	311
21.1	Translation	311
21.2	Scaling	319
21.3	Practical Transform Computing	320
21.4	Complex Conjugation and Related Symmetries	324
22	Differentiation and Fourier Transforms	331
22.1	The Differentiation Identities	331
22.2	Rigorous Derivation of the Differential Identities	338
22.3	Higher Order Differential Identities	341
22.4	Anti-Differentiation and Integral Identities	343
23	Gaussians and Other Very Rapidly Decreasing Functions	351
23.1	Basic Gaussians	351
23.2	General Gaussians	356
23.3	Gaussian-Like Functions	360
23.4	Complex Translation and Very Rapidly Decreasing Functions	365

24 Convolution and Transforms of Products	371
24.1 Derivation of the Convolution Formula	371
24.2 Basic Formulas and Properties of Convolution	373
24.3 Algebraic Properties	375
24.4 Computing Convolutions	378
24.5 Existence, Smoothness, and Derivatives of Convolutions	384
24.6 Convolution and Fourier Analysis	388
25 Correlation, Square-Integrable Functions, and the Fundamental Identity of Fourier Analysis	395
25.1 Correlation	395
25.2 Square-Integrable/Finite Energy Functions	399
25.3 The Fundamental Identity	409
26 Identity Sequences	415
26.1 An Elementary Identity Sequence	415
26.2 General Identity Sequences	418
26.3 Gaussian Identity Sequences	422
26.4 Verifying Identity Sequences	426
26.5 An Application (with Exercises)	430
27 Generalizing the Classical Theory: A Naive Approach	435
27.1 Delta Functions	435
27.2 Transforms of Periodic Functions	441
27.3 Arrays of Delta Functions	444
27.4 The Generalized Derivative	447
28 Fourier Analysis in the Analysis of Systems	463
28.1 Linear, Shift-Invariant Systems	463
28.2 Computing Outputs for LSI Systems	469
29 Gaussians as Test Functions, and Proofs of Some Important Theorems	479
29.1 Testing for Equality with Gaussians	479
29.2 The Fundamental Theorem on Invertibility	480
29.3 The Fourier Differential Identities	483
29.4 The Fundamental and Convolution Identities of Fourier Analysis	489
IV Generalized Functions and Fourier Transforms	497
30 A Starting Point for the Generalized Theory	499
30.1 Starting Points	499
31 Gaussian Test Functions	503
31.1 The Space of Gaussian Test Functions	503
31.2 On Using the Space of Gaussian Test Functions	507
31.3 Two Other Test Function Spaces and a Confession	509
31.4 More on Gaussian Test Functions	510
31.5 Norms and Operational Continuity	517
32 Generalized Functions	525
32.1 Functionals	525

32.2	Generalized Functions	528
32.3	Basic Algebra of Generalized Functions	535
32.4	Generalized Functions Based on Other Test Function Spaces	541
32.5	Some Consequences of Functional Continuity	541
32.6	The Details of Functional Continuity	547
33	Sequences and Series of Generalized Functions	555
33.1	Sequences and Limits	555
33.2	Infinite Series (Summations)	562
33.3	A Little More on Delta Functions	565
33.4	Arrays of Delta Functions	567
34	Basic Transforms of Generalized Fourier Analysis	575
34.1	Fourier Transforms	575
34.2	Generalized Scaling of the Variable	580
34.3	Generalized Translation/Shifting	585
34.4	The Generalized Derivative	593
34.5	Transforms of Limits and Series	601
34.6	Adjoint-Defined Transforms in General	602
34.7	Generalized Complex Conjugation	609
35	Generalized Products, Convolutions, and Definite Integrals	617
35.1	Multiplication and Convolution	618
35.2	Definite Integrals of Generalized Functions	627
35.3	Appendix: On Defining Generalized Products and Convolutions	631
36	Periodic Functions and Regular Arrays	637
36.1	Periodic Generalized Functions	637
36.2	Fourier Series for Periodic Generalized Functions	643
36.3	On Proving Theorem 36.5	651
37	General Solutions to Simple Equations and the Pole Functions	661
37.1	Basics on Solving Simple Algebraic Equations	662
37.2	Homogeneous Equations with Polynomial Factors	665
37.3	Nonhomogeneous Equations with Polynomial Factors	677
37.4	The Pole Functions	682
37.5	Pole Functions in Transforms, Products, and Solutions	688
V	The Discrete Theory	695
38	Periodic, Regular Arrays	697
38.1	The Index Period and Other Basic Notions	697
38.2	Fourier Series and Transforms of Periodic, Regular Arrays	699
39	Sampling and the Discrete Fourier Transform	709
39.1	Some General Conventions and Terminology	709
39.2	Sampling and the Discrete Approximation	710
39.3	The Discrete Approximation and Its Transforms	713
39.4	The Discrete Fourier Transforms	725
39.5	Discrete Transform Identities	729
39.6	Fast Fourier Transforms	735

Appendices	749
Table A.1: Fourier Transforms of Some Common Functions	751
Table A.2: Identities for the Fourier Transforms	755
References	757
Answers to Selected Exercises	759

Index	771
