CONTENTS

Preface	v
1 The Physics of Waves	1
1.1 Introduction	1
1.2 One-Dimensional Wave Equation	2
1.2.1 Transverse Traveling Waves On A String	3
1.3 General Solutions to the 1-D Wave Equation	5
1.4 Harmonic Traveling Waves	8
1.5 The Principle of Superposition	11
1.5.1 Periodic Traveling Waves	11
1.5.2 Linear Independence	12
1.6 Complex Numbers and the Complex Representation	12
1.6.1 Complex Algebra	13
1.6.2 The Complex Representation of Harmonic Waves	16
1.7 The Three-Dimensional Wave Equation	17
1.7.1 Three-Dimensional Plane Waves	19
1.7.2 Spherical Waves	20
2 Electromagnetic Waves and Photons	25
2.1 Introduction	25
2.2 Electromagnetism	26

2.3	Electromagnetic Wave Equations	32
2.3.1	Transverse Electromagnetic Waves	34
2.3.2	Energy Flow and the Poynting Vector	38
2.3.3	Irradiance	39
2.4	Photons	42
2.4.1	Single-Photon Interference	47
2.5	The Electromagnetic Spectrum	48
	Appendix: Maxwell's Equations in Differential Form	53
3	Reflection and Refraction	59
3.1	<i>Introduction</i>	59
3.2	Overview of Reflection and Refraction	60
3.2.1	Fermat's Principle of Least Time	63
3.3	Maxwell's Equations at an Interface	66
3.3.1	Boundary Conditions	66
3.3.2	Electromagnetic Waves at an Interface	67
3.4	The Fresnel Equations	69
3.4.1	Incident Wave Polarized Normal to the Plane of Incidence	70
3.4.2	Incident Wave Polarized Parallel to the Plane of Incidence	72
3.5	Interpretation of the Fresnel Equations	76
3.5.1	Normal Incidence	76
3.5.2	Brewster's Angle	76
3.5.3	Total Internal Reflection	78
3.5.4	Plots of the Fresnel Equations vs. Incident Angle	81
3.5.5	Phase Changes on Reflection	83
3.6	Reflectivity and Transmissivity	87
3.6.1	Plots of Reflectivity and Transmissivity vs. Incident Angle	90
3.6.2	The Evanescent Wave	92
3.7	*Dispersion	95
3.7.1	Dispersion in Dielectric Media	95
3.7.2	Dispersion in Conducting Media	104
3.8	Scattering	110
3.8.1	Atmospheric Scattering	110
3.8.2	Optical Materials	115
4	Geometric Optics	119
4.1	Introduction	120
4.2	Reflection and Refraction at Aspheric Surfaces	120
4.3	Reflection and Refraction at a Spherical Surface	125
4.3.1	Spherical Reflecting Surfaces	125
4.3.2	Spherical Refracting Surfaces	128

4.3.3	Sign Conventions and Ray Diagrams	131
4.4	Lens Combinations	136
4.4.1	Thin-Lenses in Close Combination	137
4.5	*Principal Points and Effective Focal Lengths	138
4.6	Aberrations	143
4.6.1	Chromatic Aberration	143
4.6.2	Spherical Aberration	146
4.6.3	Astigmatism and Coma	147
4.6.4	Field Curvature	147
4.6.5	Diffraction	148
4.7	Optical Instruments	148
4.7.1	The Camera	148
4.7.2	The Eye	150
4.7.3	The Magnifying Glass	151
4.7.4	The Compound Microscope	152
4.7.5	The Telescope	153
4.7.6	The Exit Pupil	154
4.8	*Radiometry	156
4.8.1	Extended Sources	159
4.8.2	Radiometry of Blackbody Sources	161
4.8.3	Rayleigh-Jeans Theory and the Ultraviolet Catastrophe	163
4.8.4	Planck's Quantum Theory of Blackbody Radiation	165
4.9	*Optical Fibers	169
4.10	*Thick Lenses	174
4.10.1	*Principal Points and Effective Focal Lengths of Thick Lenses	176
4.11	*Introduction to Matrix Methods in Paraxial Geometrical Optics	180
4.11.1	The Translation Matrix	180
4.11.2	The Refraction Matrix	182
4.11.3	The Reflection Matrix	184
4.11.4	The Ray Transfer Matrix	185
4.11.5	Location of Cardinal Points for an Optical System	189
	Appendix: Calculation of the Jeans Number	197
5	Superposition and Interference	199
5.1	Introduction	200
5.2	Superposition of Harmonic Waves	200
5.3	Interference Between Two Monochromatic Electromagnetic Waves	201
5.3.1	Linear Power Detection	202
5.3.2	Interference Between Beams with the Same Frequency	203
5.3.3	Thin-Film Interference	206
5.3.4	Quasi-Monochromatic Sources	210
5.3.5	Fringe Geometry	211

5.3.6	Interference Between Beams with Different Frequencies	212
5.4	Fourier Analysis	218
5.4.1	Fourier Transforms	218
5.4.2	Position Space, k-Space Domain	219
5.4.3	Frequency-Time Domain	223
5.5	Properties of Fourier Transforms	224
5.5.1	Symmetry Properties	224
5.5.2	Linearity	225
5.5.3	Transform of a Transform	225
5.6	Wavepackets	226
5.7	Group and Phase Velocity	232
5.8	Interferometry	235
5.8.1	*Energy Conservation and Complementary Fringe Patterns	240
5.9	Single-Photon Interference	243
5.10	Multiple-Beam Interference	244
5.10.1	The Scanning Fabry-Perot Interferometer	247
5.11	Interference in Multilayer Films	251
5.11.1	Antireflection Films	255
5.11.2	High-Reflectance Films	257
5.12	Coherence	259
5.12.1	Temporal Coherence	260
5.12.2	Spatial Coherence	261
5.12.3	Michelson's Stellar Interferometer	264
5.12.4	Irradiance Interferometry	265
5.12.5	Telescope Arrays	266
	Appendix: Fourier Series	269
6	Diffraction	281
6.1	Introduction	282
6.2	Huygens' Principle	282
6.2.1	Babinet's Principle	284
6.3	Fraunhofer Diffraction	285
6.3.1	Single Slit	286
6.3.2	Rectangular Aperture	291
6.3.3	Circular Aperture	293
6.3.4	Optical Resolution	295
6.3.5	More on Stellar Interferometry	297
6.3.6	Double Slit	298
6.3.7	N Slits: The Diffraction Grating	299
6.3.8	The Diffraction Grating	301
6.3.9	Fraunhofer Diffraction as a Fourier Transform	308
6.3.10	Apodization	311

6.4	Fresnel Diffraction	313
6.4.1	Fresnel Zones	315
6.4.2	Holography	325
6.4.3	Numerical Analysis of Fresnel Diffraction with Circular Symmetry	327
6.4.4	Fresnel Diffraction from Apertures with Cartesian Symmetry	329
6.5	Introduction to Quantum Electrodynamics	338
6.5.1	Feynman's Interpretation	341
7	Lasers	345
7.1	Introduction	345
7.2	Energy Levels in Atoms, Molecules, and Solids	346
7.2.1	Atomic Energy Levels	346
7.2.2	Molecular Energy Levels	350
7.2.3	Solid-state Energy Bands	352
7.2.4	Semiconductor Devices	354
7.3	Stimulated Emission and Light Amplification	357
7.4	Laser Systems	361
7.4.1	Atomic Gas Lasers	363
7.4.2	Molecular Gas Lasers	364
7.4.3	Solid-State Lasers	367
7.4.4	Other Laser Systems	369
7.5	Longitudinal Cavity Modes	370
7.6	Frequency Stability	371
7.7	Introduction to Gaussian Beams	372
7.7.1	Overview of Gaussian Beam Properties	372
7.8	Derivation of Gaussian Beam Properties	375
7.8.1	Approximate Solutions to the Wave Equation	376
7.8.2	Paraxial Spherical Gaussian Beams	378
7.8.3	Gaussian Beam Focusing	380
7.8.4	Matrix Methods and the ABCD Law	384
7.9	Laser Cavities	385
7.9.1	Laser Cavity with Equal Mirror Curvatures	386
7.9.2	Laser Cavity with Unequal Mirror Curvatures	388
7.9.3	Stable Resonators	390
7.9.4	Traveling Wave Resonators	394
7.9.5	Unstable Resonators	394
7.9.6	Transverse Cavity Modes	395
8	Optical Imaging	399
8.1	Introduction	400
8.2	Abbe Theory of Image Formation	400

8.2.1	Phase Contrast Microscope	405
8.3	The Point Spread Function	407
8.3.1	Coherent vs. Incoherent Images	407
8.3.2	Speckle	412
8.4	Resolving Power of Optical Instruments	413
8.5	Image Recording	415
8.5.1	Photographic Film	416
8.5.2	Digital Detector Arrays	417
8.6	Contrast Transfer Function	420
8.7	Spatial Filtering	421
8.8	Adaptive Optics	425
9	Polarization and Nonlinear Optics	431
9.1	Introduction	432
9.2	Linear Polarization	432
9.2.1	Linear Polarizers	433
9.2.2	Linear Polarizer Design	436
9.3	Birefringence	439
9.4	Circular and Elliptical Polarization	443
9.4.1	Wave Plates and Circular Polarizers	444
9.5	Jones Vectors and Matrices	449
9.5.1	Birefringent Colors	455
9.6	The Electro-optic Effect	458
9.6.1	Pockels Cells	458
9.6.2	Kerr Cells	460
9.7	Optical Activity	461
9.8	Faraday Rotation	463
9.9	Acousto-optic Effect	464
9.10	Nonlinear Optics	469
9.11	Harmonic Generation	471
9.11.1	Phase Conjugation Reflection by Degenerate Four-Wave Mixing	476
9.12	Frequency Mixing	478
	References	483
	Index	485
