Chapter 1

PRINCIPLES OF TEMPORAL AND SPATIAL PATTERN FORMATION IN ELECTROCHEMICAL SYSTEMS

Katharina Krischer

I. Introduction	1
II. Principles of Temporal Pattern Formation	6
1. Bistability	6
2. Simple Periodic Oscillations of Type I: Negative Differential Resistance Oscillators	12
3. Simple Periodic Oscillations of Type II: Hidden Negative Differential Resistance Oscillators	25
4. Mixed-Mode Oscillations	53
5. Concluding Remarks	68
III. Principles of Spatial Pattern Formation	71
1. Models	73
2. Experiments	104
3. Concluding Remarks	134
IV. Summary	135
Acknowledgments	137
References	138

Chapter 2

ELECTROCHEMICAL IMPEDANCE SPECTROSCOPY AND ITS APPLICATIONS

Andrzej Lasia

I. Introduction	143
1. Response of Electrical Circuits	144
2. Impedance of Electrical Circuits	148
3. Interpretation of Complex Plane and Bode Plots	154
II. Impedance Measurements	156
1. ac Bridges	156
2. Lissajous Curves	157
3. Phase-Sensitive Detection	157
4. Frequency Response Analyzers	160
5. Fast Fourier Transform	162
III. Impedance of Faradaic Reactions in the Presence of Diffusion	167
1. The Ideally Polarizable Electrode	167
2. Semi-Infinite Linear Diffusion	167
3. Spherical Diffusion	174
4. Cylindrical Electrodes	175
5. Disk Electrodes	177
6. Finite-Length Diffusion	178
7. Analysis of Impedance Data in the Case of Semi-Infinite Diffusion: Determination of Kinetic Parameters	182
IV. Impedance of a Faradaic Reaction Involving Adsorption of Reacting Species	187
1. Faradaic Reaction Involving One Adsorbed Species	188
2. Impedance Plots in the Case of One Adsorbed Species	191
3. Faradaic Impedance in the Case Involving Two Adsorbed Species	196
4. Impedance Plots in the Case of Two Adsorbed Species	199
5. Faradaic Impedance for a Process Involving Three or More Adsorbed Species	199
V. Impedance of Solid Electrodes	201
1. Frequency Dispersion and Electrode Roughness	201
2. Constant Phase Element	202

3. Fractal Model	207
4. Porous Electrode Model	210
5. Generalized Warburg Element	223
VI. Conditions for “Good” Impedances	224
1. Linearity, Causality, Stability, Finiteness	224
2. Kramers–Kronig Transforms	226
3. Nonstationary Impedances	230
VII. Modeling of Experimental Data	231
1. Selection of the Model	231
2. CNLS Approximations	235
VIII. Instrumental Limitations	239
IX. Conclusion	242
References	242

Chapter 3

ESTABLISHING THE LINK BETWEEN MULTISTEP ELECTROCHEMICAL REACTION MECHANISMS AND EXPERIMENTAL TAFEL SLOPES

Mark C. Lefebvre

I. Introduction	249
1. Structure of this Chapter	253
II. Chemical Kinetics	254
III. Simple One-Step, One-Electron Electrochemical Kinetics	255
1. Introduction	255
2. Energetics of the Electrochemical Transition State at Equilibrium	256
3. Electrochemical Reaction under Polarization	259
4. The Symmetry Factor	261
5. Double-Layer Considerations	264
6. Rate Equation	265
IV. Sequence of Consecutive Electrochemical Reactions Involving a Single Rate-Determining Step	266
1. Reaction Schemes and Intermediates	266
2. Underlying Assumptions	268

3. Steady-State and Quasi-Equilibrium Treatments	269
4. Rate Equation for Consecutive Electrochemical Reactions	272
5. Adsorption of Intermediates	274
6. Validity of the Quasi-Equilibrium Approximation	275
V. Modifications to the Consecutive Electrochemical Reaction	281
1. General Remarks	281
2. Chemical Steps	282
3. Multielectron Transfers	282
4. Combination or Dissociation as a Rate-Limiting Step	283
VI. Tafel Slopes Greater than 118 mV dec^{-1}	285
1. Introduction	285
2. Stoichiometric Number	285
3. Reaction Mechanisms Involving a Stoichiometric Number Greater than 1	287
4. Prior Dissociation, Forward Reaction Direction	289
5. Prior Dissociation, Reverse Reaction Direction	291
6. Following Combination Step	292
7. Electron Number Coefficients	293
VII. Application to the Processes of Aluminum Deposition and Dissolution	294
VIII. Conclusions	297
Acknowledgments	299
References	299

Chapter 4

ELECTRO-OSMOTIC DEWATERING OF CLAYS, SOILS, AND SUSPENSIONS

Ashok K. Vijh

I. Introduction	301
II. An Outline of Electro-Osmotic Dewatering	303
III. Phenomenological Equations	306
1. Components of Current and Flux During Electro-Osmotic Dewatering with or without Pressure	308

2. Connection of Electro-Osmosis to Other Electrokinetic Effects	310
IV. The Electrochemical Approach to Electro-Osmotic Dewatering: Helmholtz–Smoluchowski Relation	311
V. Electro-Osmotic Dewatering: Some Experimental Aspects.	315
1. Electro-Osmotic Dewatering under Interrupted Direct Current Conditions.	321
2. Electro-Osmotic Dewatering under Galvanic Conditions	323
3. Dewatering Efficiency in Terms of Liters per Ampere-Hour (or Liters per Watt-Hour at Constant Voltage).	324
4. High Voltages Needed for Dewatering Al-Kaolinite and the Aluminum Electrode Effect	325
5. Electro-Osmotic Dewatering at Low Applied Voltages.	326
6. Components of Voltage in an Electro-Osmotic Cell	327
VI. Applications of Electro-Osmotic Dewatering	328
VII. Appendix	329
Acknowledgments	330
References	331

Chapter 5

THE EFFECT OF MAGNETIC FIELDS ON ELECTROCHEMICAL PROCESSES

Thomas Z. Fahidy

I. Introduction.	333
II. Magnetic Field Effects on Electrolyte Behavior	336
1. The Hall Effect in Electrolytes	336
2. Diffusivity	336
3. Viscosity	337
4. Properties of Chemical Equilibrium	337
5. Magnetic Properties	338
III. Magnetic Field Effects on Surface Morphology	339
1. Cathode Deposits	339
2. Deposits Formed in Anodic Dissolution	340

IV. The Magnetic Field Effect on Electrode Reaction Kinetics . . .	340
V. The Magnetic Field Effect on Ionic Mass Transport	341
VI. Magnetic Field Effects in Environmental Electrochemistry	343
1. Areas of Importance	343
2. Magnetic Field Effects on Corrosion Rates	343
3. Miscellaneous Aspects	344
VII. Microscale Behavior: Application of Boltzmann Equation-Based Transport Models	344
VIII. Application of the Model of Slightly Ionized Plasmas	346
IX. Macroscale Behavior: Application of MHD Theory	346
1. Basic Notions	346
2. The Application of MHD Theory to Mass Transport	347
3. Magneto-electrolytic Mass Transport in a Magnetic Field Gradient	349
4. Profitability of Magneto-electrolytic Processes: The MHD View	350
X. Final Remarks	351
Acknowledgments	35 1
References	35 1

Chapter 6

ANALYSIS OF MASS TRANSFER AND FLUID FLOW FOR ELECTROCHEMICAL PROCESSES

J. Deliang Yang, Vijay Modi, and Alan C. West

I. Introduction	355
II. Literature Review	359
III. Computational Fluid Dynamics	362
1. CFD Algorithms	363
2. Grid Generation	366
IV. Mass Transfer	369
1. Finite-Volume Methods	370
2. Two-Dimensional Formulation on an Orthogonal Grid	372
3. Validation of Simulations	375

V. Examples of Applications	375
1. Copper Deposition	376
2. Mass Transfer during Unstable Flows Generated by a Blocking Cylinder	380
VI. Summary	384
Acknowledgments	385
Notation	385
References	386
