# PRINTED CIRCUITS HANDBOOK

**Clyde F. Coombs, Jr.** Editor-in-Chief

Sixth Edition

McGraw Hill

New York Chicago San Francisco Lisbon
London Madrid Mexico City Milan
New Delhi San Juan Seoul
Singapore Sydney Toronto

# CONTENTS

**List of Contributors** xxi
**Preface** xxiii

## Part 1 Lead-Free Legislation

**Chapter 1. Legislation and Impact on Printed Circuits** 1.3

1.1 Legislation Overview / *1.3*
1.2 Waste Electrical and Electronic Equipment (WEEE) / *1.3*
1.3 Restriction of Hazardous Substances (RoHS) / *1.3*
1.4 RoHS' Impact on the Printed Circuit Industry / *1.6*
1.5 Lead-Free perspecives / *1.10*
1.6 Other Legislative Initiatives / *1.10*

## Part 2 Printed Circuit Technology Drivers

**Chapter 2. ELECTRONIC PACKAGING AND HIGH-DENSITY INTERCONNECTIVITY** 2.3

2.1 Introduction / *2.3*
2.2 Measuring the Interconnectivity Revolution (HDI) / *2.3*
2.3 Hierarchy of Interconnections / *2.6*
2.4 Factors Affecting Selection of Interconnections / *2.7*
2.5 ICS and Packages / *2.10*
2.6 Density Evaluations / *2.14*
2.7 Methods to Increase PWB Density / *2.16*
References / *2.21*

**Chapter 3. Semiconductor Packaging Technology** 3.1

3.1 Introduction / *3.1*
3.2 Single-Chip Packaging / *3.5*
3.3 Multichip Packages / *3.15*
3.4 Optical Interconnects / *3.18*
3.5 High-Density/High-Performance Packaging Summary / *3.21*
3.6 Roadmap Information / *3.21*
References / *3.21*

**Chapter 4. Advanced Component Packaging** 4.1

4.1 Introduction / *4.1*
4.2 Lead-Free / *4.2*
4.3 System-on-a-Chip (SOC) versus System-on-a-Package (SOP) / *4.3*

- 4.4 Multichip Modules / *4.5*
- 4.5 Multichip Packaging / *4.6*
- 4.6 Enabling Technologies / *4.10*
- 4.7 Acknowledgment / *4.18*

References / *4.18*

**Chapter 5. Types of Printed Wiring Boards** **5.1**

- 5.1 Introduction / *5.1*
- 5.2 Classification of Printed Wiring Boards / *5.1*
- 5.3 Organic and Nonorganic Substrates / *5.3*
- 5.4 Graphical and Discrete-Wire Boards / *5.3*
- 5.5 Rigid and Flexible Boards / *5.5*
- 5.6 Graphically Produced Boards / *5.6*
- 5.7 Molded Interconnection Devices / *5.10*
- 5.8 Plated-Through-Hole (PTH) Technologies / *5.10*
- 5.9 Summary / *5.13*

References / *5.14*

Tech

350
LS

## Part 3 Materials

**Chapter 6. Introduction to Base Materials** **6.3**

- 6.1 Introduction / *6.1*
- 6.2 Grades and Specifications / *6.3*
- 6.3 Properties Used to Classify Base Materials / *6.9*
- 6.4 Types of FR-4 / *6.13*
- 6.5 Laminate Identification Scheme / *6.14*
- 6.6 Prepreg Identification Scheme / *6.18*
- 6.7 Laminate and Prepreg Manufacturing Processes / *6.18*

References / *6.24*

**Chapter 7. Base Material Components** **7.1**

- 7.1 Introduction / *7.1*
- 7.2 Epoxy Resin Systems / *7.1*
- 7.3 Other Resin Systems / *7.5*
- 7.4 Additives / *7.7*
- 7.5 Reinforcements / *7.12*
- 7.6 Conductive Materials / *7.18*

References / *7.25*

**Chapter 8. Properties of Base Materials** **8.1**

- 8.1 Introduction / *8.1*
- 8.2 Thermal, Physical, and Mechanical Properties / *8.1*
- 8.3 Electrical Properties / *8.13*

References / *8.16*

**Chapter 9. Base Materials Performance Issues** **9.1**

- 9.1 Introduction / *9.1*
- 9.2 Methods of Increasing Circuit Density / *9.2*
- 9.3 Copper foil / *9.2*
- 9.4 Laminate Constructions / *9.7*
- 9.5 Prepreg Options and Yield-Per-Ply Values / *9.9*

9.6 Dimensional Stability / *9.10*
9.7 High-Density Interconnect/Microvia Materials / *9.13*
9.8 CAF Growth / *9.15*
9.9 Electrical Performance / *9.22*
References / *9.33*

**Chapter 10. The Impact of Lead-Free Assembly on Base Materials 10.1**

10.1 Introduction / *10.1*
10.2 Rohs Basics / *10.1*
10.3 Base Material Compatibility Issues / *10.2*
10.4 The Impact of Lead-Free Assembly on Base Material Components / *10.4*
10.5 Critical Base Material Properties / *10.4*
10.6 Impact on Printed Circuit Reliability and Material Selection / *10.18*
10.7 Summary / *10.21*
References / *10.22*

**Chapter 11. Selecting Base Materials for Lead-Free Assembly Applications 11.1**

11.1 Introduction / *11.1*
11.2 Pcb fabrication and Assembly Interactions / *11.1*
11.3 Selecting the Right Base Material for Specific Application / *11.6*
11.4 Example Application of this Tool / *11.14*
11.5 Discussion of the Range of Peak Temperatures for Lead-Free Assembly / *11.15*
11.6 Lead-Free Applications and Ipc-4101 Specification Sheets / *11.15*
11.7 Additional Base material Options for Lead-Free Applications / *11.16*
11.8 Summary / *11.17*
References / *11.18*

**Chapter 12. Laminate Qualification and Testing 12.1**

12.1 Introduction / *12.1*
12.2 Industry Standards / *12.2*
12.3 Laminate Test Strategy / *12.4*
12.4 Initial Tests / *12.5*
12.5 Full Material Characterization / *12.9*
12.6 Characterization Test Plan / *12.22*
12.7 Manufacturability in the Shop / *12.23*

## Part 4 Engineering and Design

**Chapter 13. Physical Characteristics of the PCB 13.3**

13.1 Classes of PCB Designs / *13.3*
13.2 Types of PCBs or Packages for Electronic Circuits / *13.9*
13.3 Methods of Attaching Components / *13.14*
13.4 Component Package Types / *13.15*
13.5 Materials Choices / *13.18*
13.6 Fabrication Methods / *13.22*
13.7 Choosing a Package Type and Fabrication Vendor / *13.24*

**Chapter 14. The PCB Design Process 14.1**

14.1 Objective of the PCB Design Process / *14.1*
14.2 Design Processes / *14.1*

14.3 Design Tools / *14.6*
14.4 Selecting a Set of Design Tools / *14.10*
14.5 Interfacing Cae, Cad, and Cam Tools to Each Other / *14.11*
14.6 Inputs to the Design Process / *14.11*

**Chapter 15. Electrical and Mechanical Design Parameters** **15.1**

15.1 Printed Circuit Design Requirements / *15.1*
15.2 Introduction to Electrical Signal Integrity / *15.1*
15.3 Introduction to Electromagnetic Compatibility / *15.3*
15.4 Noise Budget / *15.4*
15.5 Designing for Signal Integrity and Electromagnetic Compatibility / *15.4*
15.6 Mechanical Design Requirements / *15.9*
References / *15.17*

**Chapter 16. Current Carrying Capacity in Printed Circuits** **16.1**

16.1 Introduction / *16.1*
16.2 Conductor (Trace) Sizing Charts / *16.1*
16.3 Current Carrying Capacity / *16.2*
16.4 Charts / *16.6*
16.5 Baseline Charts / *16.10*
16.6 Odd-Shaped Geometries and the "Swiss Cheese" Effect / *16.19*
16.7 Copper Thickness / *16.20*
References / *16.21*

**Chapter 17. PCB Design for Thermal Performance** **17.1**

17.1 Introduction / *17.1*
17.2 The PCB as a Heat Sink Soldered to the Component / *17.2*
17.3 Optimizing the PCB for Thermal Performance / *17.3*
17.4 Conducting Heat to the Chassis / *17.12*
17.5 PCB Requirements for High-Power Heat Sink Attach / *17.14*
17.6 Modeling the Thermal Performance of the PCB / *17.15*
References / *17.18*

**Chapter 18. Information Formating and Exchange** **18.1**

18.1 Introduction to Data Exchange / *18.1*
18.2 The Data Exchange Process / *18.3*
18.3 Data Exchange Formats / *18.9*
18.4 Drivers for Evolution / *18.22*
18.5 Acknowledgment / *18.23*
References / *18.23*

**Chapter 19. Planning for Design, Fabrication, and Assembly** **19.1**

19.1 Introduction / *19.1*
19.2 General Considerations / *19.3*
19.3 New Product Design / *19.4*
19.4 Layout Trade-off Planning / *19.10*
19.5 PWB Fabrication Trade-off Planning / *19.17*
19.6 Assembly Trade-Off Planning / *19.24*
References / *19.27*

**Chapter 20. Manufacturing Information, Documentation, and Transfer Including CAM Tooling for Fab and Assembly 20.1**

20.1 Introduction / *20.1*
20.2 Manufacturing Information / *20.2*
20.3 Initial Design Review / *20.7*
20.4 Design Input / *20.15*
20.5 Design Analysis and Review / *20.19*
20.6 The CAM-Tooling Process / *20.19*
20.7 Additional Processes / *20.31*
20.8 Acknowledgment / *20.32*

**Chapter 21. Embedded Components 21.1**

21.1 Introduction / *21.1*
21.2 Definitions and Example / *21.1*
21.3 Applications and Trade-Offs / *21.2*
21.4 Designing for Embedded Component Applications / *21.3*
21.5 Materials / *21.6*
21.6 Material Supply Types / *21.9*

## Part 5 High Density Interconnection

**Chapter 22. Introduction to High-Density Interconnection (HDI) Technology 22.3**

22.1 Introduction / *22.3*
22.2 Definitions / *22.3*
22.3 HDI Structures / *22.7*
22.4 Design / *22.11*
22.5 Dielectric Materials and Coating Methods / *22.13*
22.6 HDI Manufacturing Processes / *22.26*
References / *22.34*
Bibliography-Additional Reading / *22.35*

**Chapter 23. Advanced High-Density Interconnection (HDI) Technologies 23.1**

23.1 Introduction / *23.1*
23.2 Definitions of HDI Process Factors / *23.1*
23.3 HDI Fabrication Processes / *23.3*
23.4 Next-Generation HDI Processes / *23.33*
References *23.37*

## Part 6 Fabrication

**Chapter 24. Drilling Processes 24.3**

24.1 Introduction / *24.3*
24.2 Materials / *24.4*
24.3 Machines / *24.11*
24.4 Methods / *24.15*
24.5 Hole Quality / *24.18*
24.6 Postdrilling Inspection / *24.20*
24.7 Drilling Cost Per Hole / *24.20*

**Chapter 25. Precision Interconnect Drilling** 25.1

25.1 Introduction / *25.1*
25.2 Factors Affecting High-Density Drilling / *25.1*
25.3 Laser versus Mechanical / *25.2*
25.4 Factors Affecting High-Density Drilling / *25.5*
25.5 Depth-Controlled Drilling Methods / *25.10*
25.6 High-Aspect-Ratio Drilling / *25.10*
25.7 Innerlayer Inspection of Multilayer Boards / *25.13*

**Chapter 26. Imaging** 26.1

26.1 Introduction / *26.1*
26.2 Photosensitive Materials / *26.2*
26.3 Dry-Film Resists / *26.4*
26.4 Liquid Photoresists / *26.7*
26.5 Electrophoretic Depositable Photoresists / *26.8*
26.6 Resist Processing / *26.8*
26.7 Design for Manufacturing / *26.27*
References / *26.29*

**Chapter 27. Multilayer Materials and Processing** 27.1

27.1 Introduction / *27.1*
27.2 Printed Wiring Board Materials / *27.2*
27.3 Multilayer Construction Types / *27.16*
27.4 ML-PWB Processing and Flows / *27.37*
27.5 Lamination Process / *27.51*
27.6 Lamination Process Control and Troubleshooting / *27.59*
27.7 Lamination Overview / *27.63*
27.8 ML-PWB Summary / *27.63*
References / *27.63*

**Chapter 28. Preparing Boards for Plating** 28.1

28.1 Introduction / *28.1*
28.2 Process Decisions / *28.1*
28.3 Process Feedwater / *28.3*
28.4 Multilayer PTH Preprocessing / *28.4*
28.5 Electroless Copper / *28.8*
28.6 Acknowledgment / *28.11*
References / *28.11*

**Chapter 29. Electroplating** 29.1

29.1 Introduction / *29.1*
29.2 Electroplating Basics / *29.1*
29.3 High-Aspect Ratio Hole and Microvia Plating / *29.2*
29.4 Horizontal Electroplating / *29.4*
29.5 Copper Electroplating General Issues / *29.6*
29.6 Acid Copper Sulfate Solutions and Operation / *29.14*
29.7 Solder (Tin-Lead) Electroplating / *29.19*
29.8 Tin Electroplating / *29.21*
29.9 Nickel Electroplating / *29.23*
29.10 Gold Electroplating / *29.25*
29.11 Platinum Metals / *29.28*
29.12 Silver Electroplating / *29.29*

29.13 Laboratory Process control / *29.29*
29.14 Acknowledgment / *29.31*
References / *29.31*

**Chapter 30. Direct Plating** **30.1**

30.1 Direct Metallization Technology / *30.1*
References / *30.11*

**Chapter 31. PWB Manufacture Using Fully Electroless Copper** **31.1**

31.1 Fully Electroless Plating / *31.1*
31.2 The Additive Process and its Variations / *31.2*
31.3 Pattern-Plating Additive / *31.2*
31.4 Panel-Plate Additive / *31.7*
31.5 Partly Additive / *31.8*
31.6 Chemistry of Electroless Plating / *31.9*
31.7 Fully Electroless Plating Issues / *31.12*
References / *31.14*

**Chapter 32. Printed Circuit Board Surface Finishes** **32.1**

32.1 Introduction / *32.1*
32.2 Alternative Finishes / *32.3*
32.3 Hot Air Solder Level (Hasl or Hal) / *32.4*
32.4 Electroless Nickel Immersion Gold (ENIG) / *32.6*
32.5 Organic Solderability Preservative (OSP) / *32.8*
32.6 Immersion Silver / *32.10*
32.7 Immersion Tin / *32.11*
32.8 Other Surface Finishes / *32.13*
32.9 Assembly Compatibility / *32.14*
32.10 Reliability Test Methods / *32.17*
32.11 Special Topics / *32.18*
32.12 Failure Modes / *32.19*
32.13 Comparing Surface Finish Properties / *32.23*
References / *32.23*

**Chapter 33. Solder Mask** **33.1**

33.1 Introduction / *33.1*
33.2 Trends and Challenges for Solder Mask / *33.2*
33.3 Types of Solder Mask / *33.3*
33.4 Solder Mask Selection / *33.4*
33.5 Solder Mask Application and Processing / *33.9*
33.6 VIA Protection / *33.18*
33.7 Solder Mask Final Properties / *33.19*
33.8 Legend and Marking (Nomenclature) / 33.19

**Chapter 34. Etching Process and Technologies** **34.1**

34.1 Introduction / *34.1*
34.2 General Etching Considerations and Procedures / *34.2*
34.3 Resist Removal / *34.4*
34.4 Etching Solutions / *34.6*
34.5 Other Materials for Board Construction / *34.18*
34.6 Metals Other than Copper / *34.19*
34.7 Basics of Etched Line Formation / *34.20*

34.8 Equipment and Techniques / *34.26*
References / *34.29*

## Chapter 35. Machining and Routing 35.1

35.1 Introduction / *35.1*
35.2 Punching Holes (Piercing) / *35.1*
35.3 Blanking, Shearing, and Cutting of Copper-Clad Laminates / *35.3*
35.4 Routing / *35.6*
35.5 Scoring / *35.13*
35.6 Acknowledgment / *35.15*

# Part 7 Bare Board Test

## Chapter 36. Bare Board Test Objectives and Definitions 36.3

36.1 Introduction / *36.3*
36.2 The Impact of HDI / *36.3*
36.3 Why Test? / *36.4*
36.4 Circuit Board Faults / *36.6*

## Chapter 37. Bare Board Test Methods 37.1

37.1 Introduction / *37.1*
37.2 Nonelectrical Testing Methods / *37.1*
37.3 Basic Electrical Testing Methods / *37.2*
37.4 Specialized Electrical Testing Methods / *37.9*
37.5 Data and Fixture Preparation / *37.13*
37.6 Combined Testing Methods / *37.20*

## Chapter 38. Bare Board Test Equipment 38.1

38.1 Introduction / *38.1*
38.2 System Alternatives / *38.1*
38.3 Universal Grid Systems / *38.3*
38.4 Flying-Probe/Moving-Probe Test Systems / *38.17*
38.5 Verification and Repair / *38.21*
38.6 Test Department Planning and Management / *38.22*

## Chapter 39. HDI Bare Board Special Testing Methods 39.1

39.1 Introduction / *39.1*
39.2 Fine-Pitch Tilt-Pin Fixtures / *39.2*
39.3 Bending Beam Fixtures / *39.3*
39.4 Flying Probe / *39.3*
39.5 Coupled Plate / *39.3*
39.6 Shorting Plate / *39.4*
39.7 Conductive Rubber Fixtures / *39.5*
39.8 Optical Inspection / *39.5*
39.9 Noncontact Test Methods / *39.5*
39.10 Combinational Test Methods / *39.7*

# Part 8 Assembly

## Chapter 40. Assembly Processes 40.3

40.1 Introduction / *40.3*
40.2 Through-Hole Technology / *40.5*
40.3 Surface-Mount Technology / *40.16*
40.4 Odd-Form Component Assembly / *40.42*
40.5 Process Control / *40.48*
40.6 Process Equipment Selection / *40.54*
40.7 Repair and Rework / *40.57*
40.8 Conformal Coating, Encapsulation, and Underfill Materials / 40.64
40.9 Acknowledgment / *40.66*

Chapter 41. Conformal Coating 41.1

41.1 Introduction / *41.1*
41.2 Types of Conformal Coatings / *41.3*
41.3 Product Preparation / *41.6*
41.4 Application Processes / *41.7*
41.5 Cure, Inspection, and Finishing / *41.11*
41.6 Repair Methods / *41.13*
41.7 Design for Conformal Coating / *41.14*
References / *41.17*

# Part 9 Solderability Technology

Chapter 42. Solderability: Incoming Inspection and Wet Balance Technique 42.3

42.1 Introduction / *42.3*
42.2 Solderability / *42.4*
42.3 Solderability Testing—a Scientific Approach / *42.8*
42.4 The Influence of Temperature on Test Results / *42.13*
42.5 Interpreting the Results: Wetting Balance Solderability Testing / *42.14*
42.6 Globule Testing / *42.15*
42.7 PCB Surface Finishes and Solderability Testing / *42.16*
42.8 Component Solderability / *42.22*

Chapter 43. Fluxes and Cleaning 43.1

43.1 Introduction / *43.1*
43.2 Assembly Process / *43.2*
43.3 Surface Finishes / *43.3*
43.4 Soldering Flux / *43.5*
43.5 Flux Form Versus Soldering Process / *43.6*
43.6 Rosin Flux / *43.7*
43.7 Water-Soluble Flux / *43.8*
43.8 Low Solids Flux / *43.9*
43.9 Cleaning Issues / *43.10*
43.10 Summary / *43.12*
References / *43.12*

# Part 10 Solder Materials and Processes

## Chapter 44. Soldering Fundamentals 44.3

44.1 Introduction / *44.3*
44.2 Elements of a Solder Joint / *44.4*
44.3 The Solder Connection to the Circuit Board / *44.4*
44.4 The solder Connection to the Electrical Component / *44.5*
44.5 Common Metal-Joining Methods / *44.5*
44.6 Solder Overview / *44.9*
44.7 Soldering Basics / *44.9*

## Chapter 45. Soldering Materials and Metallurgy 45.1

45.1 Introduction / *45.1*
45.2 Solders / *45.2*
45.3 Solder Alloys and Corrosion / *45.4*
45.4 PB-Free Solders: Search for Alternatives and Implications / *45.5*
45.5 PB-Free Elemental Alloy Candidates / *45.5*
45.6 Board Surface Finishes / *45.11*
References / *45.19*

## Chapter 46. Solder Fluxes 46.1

46.1 Introduction to Fluxes / *46.1*
46.2 Flux Activity and Attributes / *46.2*
46.3 Flux: Ideal Versus Reality / *46.3*
46.4 Flux Types / *46.4*
46.5 Water-Clean (Aqueous) Fluxes / *46.4*
46.6 No-Clean Flux / *46.7*
46.7 Other Fluxing Caveats / *46.9*
48.8 Soldering Atmospheres / *46.12*
References / *46.15*

## Chapter 47. Soldering Techniques 47.1

47.1 Introduction / *47.1*
47.2 Mass Soldering Methods / *47.1*
47.3 Oven Reflow Soldering / *47.1*
47.4 Wave Soldering / *47.28*
47.5 Wave Solder Defects / *47.39*
47.6 Vapor-Phase Reflow Soldering / *47.42*
47.7 Laser Reflow Soldering / *47.43*
47.8 Tooling and the Need for Coplanarity and Intimate Contact / *47.50*
47.9 Additional Information Sources / *47.53*
47.10 Hot-Bar Soldering / *47.53*
47.11 Hot-Gas Soldering / *47.58*
47.12 Ultrasonic Soldering / *47.59*
References / *47.61*

## Chapter 48. Soldering Repair and Rework 48.1

48.1 Introduction / *48.1*
48.2 Hot-Gas Repair / *48.1*

48.3 Manual Solder Fountain / *48.5*
48.4 Automated Solder Fountain / *48.6*
48.5 Laser / *48.6*
48.6 Considerations for Repair / *48.6*
Reference / *48.7*

# Part 11 Nonsolder Interconnection

**Chapter 49. Press-Fit Interconnection** **49.3**

49.1 Introduction / *49.3*
49.2 The Rise of Press-Fit Technology / *49.3*
49.3 Compliant Pin Configurations / *49.4*
49.4 Press-Fit Considerations / *49.6*
49.5 Press-Fit Pin Materials / *49.7*
49.6 Surface Finishes and Effects / *49.8*
49.7 Equipment / *49.10*
49.8 Assembly Process / *49.11*
49.9 Press Routines / *49.12*
49.10 PWB Design and Board Procurement Tips / *49.14*
49.11 Press-Fit Process Tips / *49.15*
49.12 Inspection and Testing / *49.16*
49.13 Soldering and Press-Fit Pins / *49.17*
References / *49.17*

**Chapter 50. Land Grid Array Interconnect** **50.1**

50.1 Introduction / *50.1*
50.2 LGA and the Environment / *50.1*
50.3 Elements of the LGA System / *50.2*
50.4 Assembly / *50.5*
50.5 Printed Circuit Assembly (PCA) Rework / *50.7*
50.6 Design Guidelines / *50.8*
Reference / *50.8*

# Part 12 Quality

**Chapter 51. Acceptability and Quality of Fabricated Boards** **51.3**

51.1 Introduction / *51.3*
51.2 Specific Quality and Acceptability Criteria by PCB Type / *51.4*
51.3 Methods for Verification of Acceptability / *51.6*
51.4 Inspection Lot Formation / *51.7*
51.5 Inspections Categories / *51.8*
51.6 Acceptability and Quality After Simulated Solder Cycle(s) / *51.8*
51.7 Nonconforming PCBS and Material Review Board (MRB) Function / *51.10*
51.8 The Cost of the Assembled PCB / *51.11*
51.9 How to Develop Acceptability and Quality Criteria / *51.11*
51.10 Class of Service / *51.13*
51.11 Inspection Criteria / *51.13*
51.12 Reliability Inspection Using Accelerated Environmental Exposure / *51.32*

**Chapter 52. Acceptability of Printed Circuit Board Assemblies** 52.1

52.1 Understanding Customer Requirements / *52.1*
52.2 Handling to Protect the PCBA / *52.7*
52.3 PCBA Hardware Acceptability Considerations / *52.10*
52.4 Component Installation or Placement Requirements / *52.15*
52.5 Component and PCB Solderability Requirements / *52.25*
52.6 Solder-Related Defects / *52.25*
52.7 PCBA Laminate Condition, Cleanliness, and Marking Requirements / *52.32*
52.8 PCBA Coatings / *52.34*
52.9 Solderless Wrapping of Wire to Posts (Wire Wrap) / *52.35*
52.10 PCBA Modifications / *52.37*
References / *52.39*

**Chapter 53. Assembly Inspection** 53.1

53.1 Introduction / *53.1*
53.2 Definition of Defects, Faults, Process Indicators, and Potential Defects / *53.3*
53.3 Reasons for Inspection / *53.4*
53.4 Lead-Free Impact on Inspection / *53.6*
53.5 Miniaturization and Higher Complexity / *53.8*
53.6 Visual Inspection / *53.8*
53.7 Automated Inspection / *53.12*
53.8 Three-Dimensional Automated Solder Paste Inspection / *53.14*
53.9 PRE-Reflow Aoi / *53.16*
53.10 Post-Reflow Automated Inspection / *53.17*
53.11 Implementation of Inspection Systems / *53.23*
53.12 Design Implications of Inspection Systems / *53.24*
References / *53.25*

**Chapter 54. Design for Testing** 54.1

54.1 Introduction / *54.1*
54.2 Definitions / *54.2*
54.3 AD HOC Design for Testability / *54.2*
54.4 Structured Design for Testability / *54.4*
54.5 Standards-Based Testing / *54.5*
References / *54.12*

**Chapter 55. Loaded Board Testing** 55.1

55.1 Introduction / *55.1*
55.2 The process of Test / *55.1*
55.3 Definitions / *55.4*
55.4 Testing Approaches / *55.7*
55.5 In-Circuit Test Techniques / *55.11*
55.6 Alternatives to Conventional Electrical Tests / *55.17*
55.7 Tester Comparison / *55.19*
References / *55.20*

## Part 13 Reliability

**Chapter 56. Conductive Anodic Filament Formation** 56.3

*56.1 Introduction* / *56.3*
56.2 Understanding Caf Formation / *56.3*

56.3 Electrochemical Migration and Formation of Caf / *56.7*
56.4 Factors that Affect Caf Formation / *56.10*
56.5 Test Method for Caf-Resistant Materials / *56.14*
56.6 Manufacturing Tolerance Considerations / *56.14*
References / *56.15*

**Chapter 57. Reliability of Printed Circuit Assemblies** **57.1**

57.1 Fundamentals of Reliability / *57.2*
57.2 Failure Mechanisms of PCBS and Their Interconnects / *57.4*
57.3 Influence of Design on Reliability / *57.19*
57.4 Impact of PCB Fabrication and Assembly on Reliability / *57.20*
57.5 Influence of Materials Selection on Reliability / *57.27*
57.6 Burn-in, Acceptance Testing, and Accelerated Reliability Testing / *57.36*
57.7 Summary / *57.45*
References / *57.45*
Further Reading / *57.47*

**Chapter 58. Component-to-PWB Reliability: The Impact of Design Variables and Lead Free** **58.1**

58.1 Introduction / *58.1*
58.2 Packaging Challenges / *58.2*
58.3 Variables that Impact Reliability / *58.5*
References / *58.30*

**Chapter 59. Component-to-PWB Reliability: Estimating Solder-Joint Reliability and the Impact of Lead-Free Solders** **59.1**

59.1 Introduction / *59.1*
59.2 Thermomechanical Reliability / *59.3*
59.3 Mechanical Reliability / *59.20*
59.4 Finite Element Analysis (FEA) / *59.27*
References / *59.35*

## Part 14 Environmental Issues

**Chapter 60. Process Waste Minimization and Treatment** **60.3**

60.1 Introduction / *60.3*
60.2 Regulatory Compliance / *60.3*
60.3 Major Sources and Amounts of Wastewater in a Printed Circuit Board Fabrication Facility / *60.5*
60.4 Waste Minimization / *60.6*
60.5 Pollution Prevention Techniques / *60.8*
60.6 Recycling and Recovery Techniques / *60.15*
60.7 Alternative Treatments / *60.18*
60.8 Chemical Treatment Systems / *60.21*
60.9 Advantages and Disadvantages of Various Treatment Alternatives / *60.26*

## Part 15 Flexible Circuits

**Chapter 61. Flexible Circuit Applications and Materials 61.3**

61.1 Introduction to Flexible Circuits / *61.3*
61.2 Applications of Flexible Circuits / *61.6*
61.3 High-Density Flexible Circuits / *61.6*
61.4 Materials for Flexible Circuits / *61.8*
61.5 Substrate Material Properties / *61.9*
61.6 Conductor Materials / *61.13*
61.7 Copper-Clad Laminates / *61.14*
61.8 Coverlay Material / *61.19*
61.9 Stiffener Materials / *61.22*
61.10 Adhesive materials / *61.22*
61.11 Restriction of Hazardous Substances (ROHS) Issues / *61.23*

**Chapter 62. Design of Flexible Circuits 62.1**

62.1 Introduction / *62.1*
62.2 Design Procedure / *62.1*
62.3 Types of Flexible Circuits / *62.2*
62.4 Circuit Designs for Flexibility / *62.12*
62.5 Electrical Design of the Circuits / *62.15*
62.6 Circuit Designs for Higher Reliability / *62.16*
62.7 Circuit Designs for Rohs Compliance / *62.17*

**Chapter 63. Manufacturing of Flexible Circuits 63.1**

63.1 Introduction / *63.1*
63.2 Special Issues with HDI Flexible Circuits / *63.1*
63.3 Basic Process Elements / *63.3*
63.4 New Processes for Fine Traces / *63.14*
63.5 Coverlay Processes / *63.24*
63.6 Surface Treatment / *63.30*
63.7 Blanking / *63.31*
63.8 Stiffener Processes / *63.33*
63.9 Packaging / *63.33*
63.10 Roll-to-Roll Manufacturing / *63.34*
63.11 Dimension Control / *63.36*

**Chapter 64. Termination of Flexible Circuits 64.1**

64.1 Introduction / *64.1*
64.2 Selection of Termination Technologies / *64.1*
64.3 Permanent Connections / *64.4*
64.4 Semipermanent Connections / *64.11*
64.5 Nonpermanent Connections / *64.13*
64.6 High-Density Flexible Circuit Termination / *64.20*

**Chapter 65. Multilayer Flex and Rigid/Flex 65.1**

65.1 Introduction / *65.1*
65.2 Multilayer Rigid/flex / *65.1*

**Chapter 66. Special Constructions of Flexible Circuits** **66.1**

66.1 Introduction / *66.1*
66.2 Flying-Lead Construction / *66.1*
66.3 Tape Automated Bonding / *66.8*
68.4 Microbump Arrays / *66.10*
66.5 Thick-Film Conductor Flex Circuits / *66.12*
66.6 Shielding of the Flexible Cables / *66.13*
66.7 Functional Flexible Circuits / *66.14*

**Chapter 67. Quality Assurance of Flexible Circuits** **67.1**

67.1 Introduction / *67.1*
67.2 Basic Concepts in Flexible Circuit Quality Assurance / *67.1*
67.3 Automatic Optical Inspection Systems / *67.2*
67.4 Dimensional Measurements / *67.3*
67.5 Electrical Tests / *67.3*
67.6 Inspection Sequence / *67.3*
67.7 Raw Materials / *67.6*
67.8 Flexible Circuit Feature Inspection / *67.6*
67.9 Standards and Specifications for Flexible Circuits / *67.8*

**Appendix** **A.1**
**Glossary** **G.1**
**Index** **I.1**
