Probability Matching Priors: Higher Order Asymptotics

Springer

Contents

1	Introduction and the Shrinkage Argument	1
1.1	Scope of the monograph	1
1.2	The shrinkage argument	3
1.3	An example	5
2	Matching Priors for Posterior Quantiles	9
2.1	Introduction	9
2.2	Setup, notation and preliminaries	10
2.3	Posterior quantile	14
2.4	Characterization of matching priors	17
2.5	Special cases	21
2.5.1	The case $p = 1$	21
2.5.2	The case $p = 2$	24
2.5.3	Orthogonal parameterization	26
2.5.4	Two general classes of models	30
2.6	Further examples	34
2.7	Invariance	39
2.8	General parametric functions and Bayesian tolerance limits ...	41
2.8.1	General parametric functions	41
2.8.2	Bayesian tolerance limits	45
2.9	Matching alternative coverage probabilities	47
2.10	Propriety of posteriors	49
3	Matching Priors for Distribution Functions	53
3.1	Introduction	53
3.2	C.d.f. matching priors for a single parametric function	53
3.2.1	Scalar interest parameter	53
3.2.2	Single parametric function	55
3.3	C.d.f. matching priors for multiple parametric functions	57
3.3.1	Multiple parametric functions	57
3.3.2	Regression residuals approach to c.d.f. matching	61

4	Matching Priors for Highest Posterior Density Regions	65
4.1	Introduction	65
4.2	Explicit form of an HPD region	65
4.3	Characterization of HPD matching priors	68
4.4	Results in the presence of nuisance parameters	75
5	Matching Priors for Other Credible Regions	79
5.1	Introduction	79
5.2	Matching priors associated with the LR statistic	79
5.2.1	Credible region via the LR statistic	79
5.2.2	Matching priors	81
5.2.3	Results in the presence of nuisance parameters	84
5.3	Frequentist Bartlett adjustment	87
5.4	Matching priors associated with Rao's score and Wald's statistics	89
5.5	Perturbed ellipsoidal and HPD regions	93
5.5.1	Perturbed ellipsoidal region	94
5.5.2	Perturbed HPD region	97
6	Matching Priors for Prediction	99
6.1	Introduction	99
6.2	Matching priors for prediction: no auxiliary variable	100
6.2.1	Preliminaries: expansion for the predictive density	100
6.2.2	Frequentist validity of posterior quantiles	102
6.2.3	Frequentist validity of highest posterior predictive density regions	105
6.2.4	Prediction intervals	108
6.3	Matching priors for predicting a dependent variable in - regression models	110
6.3.1	Posterior predictive density	111
6.3.2	Matching conditions	112
6.3.3	Examples: applications to regression models	113
6.4	Concluding remarks	115
	References	117
