

**PROBABILITY MEASURES
ON METRIC SPACES**

K. R. PARTHASARATHY

AMS CHELSEA PUBLISHING
American Mathematical Society • Providence, Rhode Island

CONTENTS

<i>Preface</i>	v
--------------------------	---

Chapter I—The Borel Subsets of a Metric Space

1. General Properties of Borel Sets	1
2. The Isomorphism Theorem	7
3. The Kuratowski Theorem	15
4. Borel Cross Sections in Compact Metric Spaces	22
5. Borel Cross Sections in Locally Compact Groups	24

Chapter II—Probability Measures in a Metric Space

1. Regular Measures	26
2. Spectrum of a Measure	27
3. Tight Measures	28
4. Perfect Measures	30
5. Linear Functionals and Measures	32
6. The Weak Topology in the Space of Measures	39
7. Convergence of Sample Distributions	52
8. Existence of Nonatomic Measures in Metric Spaces	53

Chapter III—Probability Measures in a Metric Group

1. The Convolution Operation	56
2. Shift Compactness in $\mathcal{M}(X)$	58
3. Idempotent Measures	61

4. Indecomposable Measures	63
5. The Case When X Is Abelian	70

Chapter IV—Probability Measures in Locally Compact Abelian Groups

1. Introduction	73
2. Preliminary Facts about a Group and Its Character Group	74
3. Measures and Their Fourier Transforms	74
4. Infinitely Divisible Distributions	77
5. General Limit Theorems for Sums of Infinitesimal Summands	82
6. Gaussian Distributions	97
7. Representation of Infinitely Divisible Distributions	102
8. Uniqueness of the Representation	109
9. Compactness Criteria	113
10. Representation of Convolution Semigroups	116
11. A Decomposition Theorem	118
12. Absolutely Continuous Indecomposable Distributions in X	120

Chapter V—The Kolmogorov Consistency Theorem and Conditional Probability

1. Statement of the First Problem	131
2. Standard Borel Spaces	132
3. The Consistency Theorem in the Case of Inverse Limits of Borel Spaces	137
4. The Extension Theorem	140
5. The Kolmogorov Consistency Theorem	143
6. Statement of the Second Problem	144
7. Existence of Conditional Probability	145
8. Regular Conditional Probability	146

Chapter VI—Probability Measures in a Hilbert Space

1. Introduction	151
2. Characteristic Functions and Compactness Criteria	151
3. An Estimate of the Variance	165
4. Infinitely Divisible Distributions	170
5. Compactness Criteria	182
6. Accompanying Laws	189
7. Representation of Convolution Semigroups	201
8. Decomposition Theorem	201
9. Ergodic Theorems	202

Chapter VII—Probability Measures on $C[0, 1]$ and $D[0, 1]$

1. Introduction	211
2. Probability Measures on $C[0, 1]$	212

CONTENTS

xi

3. A Condition for the Realization of a Stochastic Process in " C "	215
4. Convergence to Brownian Motion	219
5. Distributions of Certain Random Variables Associated with the Brownian Motion	224
6. The Space $D[0, 1]$	231
7. Probability Measures in " D "	249
8. Ergodic Theorems for D -Valued Random Variables	254
9. Applications to Statistical Tests of Hypothesis	259
Bibliographical Notes	268
Bibliography	270
List of Symbols	273
<i>Author Index</i>	274
<i>Subject Index</i>	275
