## Institute of Museum and Library Services

Susan H. Hildreth, Director
The Institute of Museum and Library Services is the primary source of federal support for the nation's 123,000 libraries and 17,500 museums. The Institute's mission is to create strong libraries and museums that connect people to information and ideas. The Institute works at the national level and in coordination with state and local organizations to sustain heritage, culture, and knowledge; enhance learning and innovation; and support professional development. To learn more about the Institute, please visit www.imls.gov.

## Acknowledgments

Many individuals made important contributions to this report. The Institute of Museum and Library Services (IMLS) is grateful for their dedication.

Following is the list of those individuals (alphabetical by group):

## U.S. Census Bureau staff:

Terri Craig, Suzanne Dorinski, Michael Freeman, Natasha Isaac, Patricia O'Shea, Peter Schilling, and Jennifer Scotto.

IMLS would like to extend a special thank you to members of the survey advisory group for their help in managing the survey process. The Library Statistics Working Group (LSWG) is a vital part of the survey team. Their time and effort has helped make this report a more valuable resource to the library community and the public.

Members of the LSWG:
Hulen Bivins, State Librarian, North Dakota State Library
Howard Boksenbaum, Chief of Library Services, Rhode Island Department of Administration
Cathleen Bourdon, Associate Executive Director, American Library Association
Jo Budler, State Library, State Library of Kansas
Peter Haxton, State Data Coordinator, State Library of Kansas
Edythe "Edie" Huffman, State Data Coordinator, Indiana State Library
Martha Kyrillidou, Director of Statistics and Service Quality, Association of Research Libraries
Frank Nelson, State Data Coordinator, Idaho Commission for Libraries
Wayne Onkst, State Librarian and Commissioner, Kentucky Department for Libraries and Archives
Bruce Pomerantz, State Data Coordinator, Minnesota State Library Services
Peggy D. Rudd, Director and Librarian, Texas State Library and Archives Commission
Diana Very, State Data Coordinator, Georgia Public Library Service
IMLS also extends sincere gratitude to the Chief Officers, State Data Coordinators, other State Library Agency staff, and public library directors and their staff who provided the data for this report. Their diligent efforts result in a national data resource with an exceptionally high response rate, year after year.

11 Number of public-use Internet computers in public libraries and uses of Internet computers per year, by state: Fiscal year 2009 ..... 81
11A Number of public-use Internet computers in public libraries and uses of Internet computers per year in the 50 states and the District of Columbia, by population of legal service area: Fiscal year 2009 ..... 84
Collections
12 Number of public library materials and library materials per capita or per 1,000 population, by type of material and state: Fiscal year 2009 ..... 85
12A Number of public library materials and library materials per capita or per 1,000 population in the 50 states and the District of Columbia, by type of material and population of legal service area: Fiscal year 2009 ..... 88
13 Percentage distribution of public libraries, by size of print materials collection and state: Fiscal year 2009 ..... 89
13A Percentage distribution of public libraries in the 50 states and the District of Columbia, by size of print materials collection and population of legal service area: Fiscal year 2009 ..... 92
14 Total, average, and median number of electronic materials in public libraries, by type of material and state: Fiscal year 2009 ..... 93

14A Total, average, and median number of electronic materials in public libraries in the 50 states and the District of Columbia, by type of material and population of legal service area: Fiscal year 2009.96

15 Total licensed databases in public libraries and percentage distribution of databases,
by source of databases and state: Fiscal year 2009 ..... 97

15A Total licensed databases in public libraries and percentage distribution of databases in the 50 states and the District of Columbia, by source of databases and population of legal service area: Fiscal year 2009.100

## Staff

16 Number of paid full-time-equivalent (FTE) staff in public libraries, by type of position; percentage of total librarians and total staff with "ALA-MLS" degrees; and number of public libraries with "ALA-MLS" librarians, by state: Fiscal year 2009101

16A Number of paid full-time-equivalent (FTE) staff in public libraries, by type of position; percentage of total librarians and total staff with "ALA-MLS" degrees; and number of public libraries with "ALA-MLS" librarians in the 50 states and the District of Columbia, by population of legal service area: Fiscal year 2009104

17 Percentage distribution of public libraries, by number of paid full-time-equivalent (FTE)
staff and state: Fiscal year 2009 ..... 105

17A Percentage distribution of public libraries in the 50 states and the District of Columbia, by number of paid full-time-equivalent (FTE) staff and population of legal service area: Fiscal year 2009108

## Operating Revenue

18 Total operating revenue of public libraries and percentage distribution of revenue, by $\quad 109$
18A Total operating revenue of public libraries and percentage distribution of revenue in the 50 states and the District of Columbia, by source of revenue and population of legal service area: Fiscal year 2009.112

19 Total per capita operating revenue of public libraries, by source of revenue and state:
Fiscal year 2009 ..... 113

19A Total per capita operating revenue of public libraries in the 50 states and the District of Columbia, by source of revenue and population of legal service area: Fiscal year 2009116

20 Percentage distribution of public libraries, by per capita operating revenue from local
sources and state: Fiscal year 2009 ..... 117
20A Percentage distribution of public libraries in the 50 states and the District of Columbia, by per capita operating revenue from local sources and population of legal service area: Fiscal year 2009 ..... 120

## Operating Expenditures

21 Total operating expenditures of public libraries and percentage distribution of expenditures, by type of expenditure and state: Fiscal year 2009 ..... 121
21A Total operating expenditures of public libraries in the 50 states and the District of Columbia and percentage distribution of expenditures, by type of expenditure and population of legal service area: Fiscal year 2009 ..... 124
22 Total per capita operating expenditures of public libraries, by type of expenditure and state: Fiscal year 2009 ..... 125
22A Total per capita operating expenditures of public libraries in the 50 states and the District of Columbia, by type of expenditure and population of legal service area: Fiscal year 2009. ..... 128
23 Total collection expenditures of public libraries and percentage distribution of expenditures, by type of expenditure and state: Fiscal year 2009 ..... 129
23A Total collection expenditures of public libraries in the 50 states and the District of Columbia and percentage distribution of expenditures, by type of expenditure and population of legal service area: Fiscal year 2009 ..... 132
24 Percentage distribution of public libraries, by total operating expenditures and state: Fiscal year 2009 ..... 133
24A Percentage distribution of public libraries in the 50 states and the District of Columbia, by total operating expenditures and population of legal service area: Fiscal year 2009 ..... 136
25 Percentage distribution of public libraries, by total per capita operating expenditures and state: Fiscal year 2009 ..... 137
25A Percentage distribution of public libraries in the 50 states and the District of Columbia, by total per capita operating expenditures and population of legal service area: Fiscal year 2009 ..... 140
Capital Revenue and Expenditures
26 Total capital revenue of public libraries and percentage distribution of revenue, by source of revenue and state: Fiscal year 2009 ..... 141
26A Total capital revenue of public libraries and percentage distribution of revenue in the 50 states and the District of Columbia, by source of revenue and population of legal service area: Fiscal year 2009 ..... 144
27 Total capital revenue of public libraries and percentage distribution of public libraries by total capital revenue category and state: Fiscal year 2009. ..... 145
27A Total capital revenue of public libraries in the 50 states and the District of Columbia and percentage distribution of public libraries, by total capital revenue category and population of legal service area: Fiscal year 2009 ..... 148
28 Total capital expenditures of public libraries and percentage distribution of public libraries by total capital expenditures category and state: Fiscal year 2009149
28A Total capital expenditures of public libraries in the 50 states and the District of Columbia and percentage distribution of public libraries by total capital expenditures and population of legal service area: Fiscal year 2009 ..... 152
Square Footage of Service Outlets
29 Number and square footage of single-outlet public libraries, by state: Fiscal year 2009 ..... 153
29A Number and square footage of single-outlet public libraries in the 50 states and the District of Columbia, by population of legal service area: Fiscal year 2009 ..... 156
30 Number and square footage of multiple-outlet public libraries, by type of outlet and state: Fiscal year 2009 ..... 157
30A Number and square footage of multiple-outlet public libraries in the 50 states and the District of Columbia, by type of outlet and population of legal service area: Fiscal year 2009 ..... 160
31 Number and square footage of central outlets of public libraries, by population of legal service area and state: Fiscal year 2009 ..... 161
32 Number and square footage of branch outlets of public libraries, by population of legal service area and state: Fiscal year 2009 ..... 165
Appendix A - Public Library State Ranking Tables
A1 Number of library visits and reference transactions of public libraries per capita, by state: Fiscal year 2009 ..... 172
A2 Number of circulation transactions of public libraries per capita and interlibrary loans received per 1,000 population, by state: Fiscal year 2009 ..... 173
A3 Average number of public-use Internet computers of public libraries per stationary outlet and number per 5,000 population, by state: Fiscal year 2009 ..... 174
A4 Number of print materials of public libraries per capita and audio materials per 1,000 population, by state: Fiscal year 2009 ..... 175
A5 Number of video materials and current print serial subscriptions of public libraries per 1,000 population, by state: Fiscal year 2009 ..... 176
A6 Number of paid full-time-equivalent (FTE) staff and paid FTE librarians of public libraries per 25,000 population, by state: Fiscal year 2009 ..... 177
A7 Number of paid full-time-equivalent (FTE) librarians with "ALA-MLS" and other paid FTE staff of public libraries per 25,000 population, by state: Fiscal year 2009 ..... 178

## Introduction

The Public Libraries Survey (PLS) is a voluntary survey conducted annually by the Institute of Museum and Library Services (IMLS). IMLS collects these data under the mandate in the Museum and Library Services Act of 2003 as stated in SEC. 210. The U.S. Census Bureau is the data collection agent for IMLS. The fiscal year (FY) 2009 survey is the 22nd in the series.

## Survey Purpose and Data Items Included in This Report

The PLS provides a national census of public libraries and their public service outlets (see Key Library Terminology below). These data are useful to federal, state, and local policymakers; library and public policy researchers; and the public, journalists, and others.

This report provides summary information about public libraries in the 50 states and the District of Columbia for state FY2009. ${ }^{1}$ It covers service measures such as number of uses of electronic resources, number of Internet terminals used by the general public, reference transactions, interlibrary loans, circulation, library visits, children's program attendance, and circulation of children's materials. It also includes information about size of collection, staffing, operating revenue and expenditures, type of legal basis, and number and type of public library service outlets. This report is based on the final data file.

The PLS is designed as a universe survey. The survey frame consists of 9,277 public libraries (9,225 public libraries in the 50 states and the District of Columbia and 52 public libraries in the outlying areas of Guam, the Northern Mariana Islands, Puerto Rico and the Virgin Islands), as identified by state library agencies. (Public libraries in one outlying area, American Samoa, are not included in the survey frame because their state library agency has never responded to the request for participation in the survey). A total of 9,082 of the 9,277 public libraries in the survey frame responded to the FY2009 PLS (including Guam and Puerto Rico), for a unit response rate of 97.9 percent. Item response rates are included in the tables in this report. ${ }^{2}$ The data were submitted over the Internet via a web-based reporting system. (See Data Collection in Appendix B for more information.)

## Organization of This Report

This report includes the following major sections:

- Introduction
- Survey Purpose and Data Items Included in this Report
- Congressional Authorization
- Key Library Terminology
- Types of Tables Included in this Report
- History of the Public Libraries Survey
- Findings from the FY2009 data collection
- Tables (including State Ranking Tables in Appendix A)
- Technical Notes (Appendix B)
- Survey Questionnaire (Appendix C)

[^0]
## Congressional Authorization

Two separate laws cover the protection of the confidentiality of individually identifiable information collected by the Institute of Museum and Library Services - the Privacy Act of 1974 and the EGovernment Act of 2002. The Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Institute of Museum and Library Services are prepared under the Treasury and General Government Appropriations Act for Fiscal Year 2001, Section 515(b).

IMLS will fulfill the congressional mandate in the Museum and Library Services Act of 2003 as stated in Section 210. Analysis of Impact of Museum and Library Services:
'From amounts described in Sections 214(c) and 275(b), the Director shall carry out and publish analyses of the impact of...library services. Such analyses-
(1) shall be conducted in ongoing consultation with-
(A) State library administrative agencies;
(B) State, regional, and national library...organizations; and
(C) other relevant agencies and organizations;
(2) shall identify national needs for, and trends of...library services provided with funds made available under subtitles $B$ and $C$...

IMLS library survey activities will be designed to address high-priority library data needs; provide consistent, reliable, complete, and accurate indicators of the status and trends of state and public libraries; and report timely, useful, and high-quality data to the U.S. Congress, the States, other education policymakers, practitioners, data users, and the general public.

## Key Library Terminology ${ }^{3}$

- Public library. A public library is an entity that is established under state enabling laws or regulations to serve a community, district, or region, and that provides at least the following: (1) an organized collection of printed or other library materials, or a combination thereof; (2) paid staff; (3) an established schedule in which services of the staff are available to the public; (4) the facilities necessary to support such a collection, staff, and schedule; and (5) is supported in whole or in part with public funds.
- Administrative entity. An administrative entity is the agency that is legally established under local or state law to provide public library service to the population of a local jurisdiction. The administrative entity may have a single public library service outlet, or it may have more than one public library service outlet. (Note: In this report, the term public library means an administrative entity.)
- Public library service outlet. Public libraries can have one or more outlets that provide direct service to the public. The three types of public library service outlets included in this report are central library outlets, branch library outlets, and bookmobile outlets. Information on a fourth type of outlet, books-by-mail-only outlets, was collected but omitted from this report because these outlets are not open to the public. The four outlet types are defined in Appendix C in item 709 of the definitions. Table 3 reports data concerning public library service outlets.

[^1]
## Types of Tables Included in This Report

There are 72 tables in this report: Tables 1 through 1B provide overview data, by state, about the number of public libraries and population of legal service area. Tables 2 through 30 are in sets of 2 each. The base table in each set (Tables 2 through 30) displays data for the nation as a whole and for each of the 50 states and the District of Columbia. The "A" table in each set displays the same data by 11 ranges of population of legal service area. Tables 29 through 32 include data about square footage. Appendix A includes 12 tables of state rankings. Appendix B includes 2 tables that expand on the technical notes.

## History of the Public Libraries Survey

In 1985, the National Center for Education Statistics (NCES) and the American Library Association (ALA) conducted a pilot project in 15 states to assess the feasibility of a federal-state cooperative program for the collection of public library data. The project was jointly funded by NCES and the U.S. Department of Education's former Library Programs (LP) office. In 1987, the project's final report recommended the development of a nationwide data collection system. The Hawkins-Stafford Elementary and Secondary School Improvement Amendments of 1988 (P.L. 100-297) charged NCES with developing a voluntary Federal-State Cooperative System (FSCS) for the annual collection of public library data. ${ }^{4}$ To carry out this mandate, a task force was formed by NCES and the National Commission on Libraries and Information Science (NCLIS), and the FSCS was established in 1988.

The first survey report in this series, Public Libraries in 50 States and the District of Columbia: 1989, which included data from 8,699 public libraries in 50 states and the District of Columbia, was released by NCES in 1991. A data file and survey report have been released annually since then. The states have always submitted their data electronically, via customized personal computer survey software through FY2004, and via a web-based application beginning in FY2005.

On October 1, 2007 the survey was transferred from NCES to IMLS. The FY2006 survey was collected by NCES and released by IMLS. The FY2009 survey is the third PLS data collection and release by IMLS.

[^2]
## Executive Summary

In this report we provide highlights from the FY2009 Public Library Survey (PLS), in which we compare key elements from fiscal year 2009 to previous years. The results are based on public libraries in the 50 states and the District of Columbia.
$\checkmark$ Visitation and circulation per capita have both increased in public libraries over the past 10 years. Per capita visitation increased 5 percent from the prior year. Visitation and circulation were highest in suburban public libraries.
$\checkmark$ The number of public libraries has increased over the past 10 years. However, this growth has been outpaced by changes in the population.
$\checkmark$ The nature and composition of collections in U.S. public libraries is changing, indicating the more varied types of materials found in modern public libraries. Although the volume of print materials has decreased over the past 10 years, collections overall continue to grow because of increases in the number of audio, video, and electronic book materials.
$\checkmark$ The role of public libraries in providing Internet resources to the public continues to increase. The availability of Internet-ready computer terminals in public libraries has doubled over the past 10 years. Internet PC use has also increased.
$\checkmark$ Public libraries have increased their program offerings to meet increased demand and to allow for more individualized attention through smaller class sizes. This is particularly true of public libraries in rural areas, where the number of programs per capita and attendance per capita are both higher than the national average.
$\checkmark$ Overall, staffing has remained stable since FY2000. However, the percentage of public library systems with at least one ALA-MLS degreed librarian on staff has increased over the past 10 years.
$\checkmark$ Total revenue for U.S. public libraries was $\$ 11.59$ billion in FY2009, and total expenditures were $\$ 10.95$ billion, both of which show a 10 -year increase (in constant 2009 dollars). Total revenue and expenditures per capita have also increased over the 10-year study period, which are highest in suburban areas.
$\checkmark$ The proportion of revenue by source has been changing over 10 years. In the majority of states, the highest proportion of the annual operating revenue in FY2009 came from local government. Both the amount and proportion of the budget from local government increased over 10 years. At the same time, state government contributions decreased, in both amount and proportion, with the exception of specific states.

Overall, the results show a change over 10 years in many of the metrics for public libraries regarding revenue sources, services, and library collections. In some cases, there are differences in these metrics based on state or locality.

## Findings of the Public Library Survey, FY2009

There were 9,225 public libraries (administrative entities) in the 50 states and the District of Columbia in fiscal year (FY) 2009 (Table 1). Public libraries are widely distributed across the United States (Figure 1). Public library service areas encompassed 97.4 percent of the total population of the states and the District of Columbia in FY2009, either in legally established service areas or in areas under contract. Out of all the public libraries surveyed, 1,089 (11.8 percent) served the majority of the population (73.0 percent) in legally served areas in the United States in FY2009. Each of these libraries was in more densely populated areas (urban or suburban) and each had a legal service area population of 50,000 or more (derived from Tables 1A and 1B).

Figure 1. Distribution of US Public Libraries by State: Number of Libraries per 100,000 people, FY2009

Source: Public Library Survey, FY2009, Institute of Museum and Library Services

Through the opening and closing of public libraries across the nation, the number of public libraries in FY2009 has increased by a net gain of 151, an overall increase of 1.7 percent since FY2000. Most states (31 states: 60.8 percent) saw an increase in their public libraries. However, this growth has been outpaced by changes in the national population, which has increased by 11.7 percent since FY2000. Thus, the change in the number of public libraries per capita has decreased (Figure 2).

Figure 2. Change in Number of US Public Libraries per $\mathbf{1 0 0 , 0 0 0}$ people, since FY2000

Source: Public Library Survey, FY2000-2009, Institute of Museum and Library Services/National Center for Education Statistics

## Library Services

## Visits \& Circulation

In FY2009, public libraries had 1.59 billion visits, an increase of 5.7 percent from 1.50 billion in the previous year. Library visitation per capita has increased over the past 10 years (Figure 3). On average, individuals within a library service area visited the public library over five times (5.3), an increase of 5.0 percent from FY2008 and a 10-year increase of 24.3 percent since FY2000. Over 169.7 million people were registered to borrow books at public libraries, comprising 57.1 percent of the population in the legal service area. This is a 4.8 percent increase from the number of registered borrowers in FY2006, the first year in which this information was collected in the PLS.

Overall, the nation's public libraries circulated 2.41 billion materials in FY2009. Circulation per capita provides a measure of how many people within a public library service area checked out materials. Like visitation, circulation per capita has also increased over the past 10 years, with a per-person circulation of 8.1 in FY2009 (Figure 4). This is an increase of 5.2 percent from FY2008 and a 10-year increase of 26.1 percent since FY2000. Circulation of children's materials has also increased. Per capita circulation of children's materials was 2.7 in FY2009, a 3.1 percent increase from the previous year and a 10-year increase of 17.0 percent.

Circulation per visits is an indication of how often someone who goes to a public library checked out materials during their visit, which allows us to examine how patterns of library use may be changing. Circulation per 1,000 visits in FY2009 was 1,517 (Figure 5). Although there was an initial increase of 2.3 percent from FY2000 to 2003, overall the metric has been stable across the observed period (FY20002009), with a 10-year net increase of 1.5 percent, fluctuating from a low in FY2000 $(1,495)$ to a high in FY2003 ( 1,530 ). Circulation of children's material per 1,000 visits was 513 in FY2009, which is a decline of 1.8 percent since FY2000. Circulation of children's material comprises 33.8 percent of total circulation, which is down 2.0 percent from FY2008.

Figure 5. US Public Library - Circulation per 1,000 visits, FY2000-2009

In order to examine differences in visitation and circulation per capita in FY2009, these metrics are broken out by locale. ${ }^{5}$ Both visitation and circulation were highest in suburban areas (Figure 6). For public libraries in suburban areas, visitation per capita was 5.9 and circulation per capita was 9.6, rates that were 9.6 percent and 17.8 percent above the national average, respectively. In general, per capita visitation and circulation were lower in towns and rural areas.

## Reference Transactions

Reference transactions have been decreasing over the 10-year period from FY2000 to 2009 (Figure 7). Reference transactions per capita were 1.04 in FY2009. There has been a slow decrease over the past 10 years, down 4.8 percent since FY2000. However, recent activity has evidenced a slight increasing trend of 4.1 percent since FY2007. There were 194.7 reference transactions per 1,000 visits in FY2009 (Figure 8). This is the result of a steady decreasing trend over the past 10 years, down 23.5 percent since FY2000. Together, these two metrics provide insight into the role public libraries may be playing for the reference needs of their constituents. Specifically, the per capita trend suggests that people are still coming to the library to look for information, but the per-visits trend indicates that fewer people who come to the library are seeking information from the reference staff.

[^3]

Figure 8. US Public Library - Reference Transactions per 1,000 visits, FY 2000-2009

Reference transactions were lowest in towns and rural areas (Figure 9 and Figure 10). Reference transactions per capita were 0.6 for towns and 0.7 for rural areas, levels that were below the national average by 40.4 percent and 29.0 percent, respectively. A similar pattern was seen in reference transactions per 1,000 visits. Per-visit reference transactions were 132.0 for towns 153.1 for rural areas, which were 32.2 percent and 21.4 percent below the national average.

Figure 9. US Public Library Services by Locality: Reference Transactions Per Capita, FY2009

## Computer Use and Availability

The availability of Internet-accessible computer terminals in public libraries has doubled over the past 10 years (Figure 11). There were 3.9 Internet PCs per 5,000 people in FY2009, an increase of 109.3 percent since FY2000. This increase of Internet accessibility is even more profound in rural areas (Figure 12). Public libraries in rural areas have 5.9 PCs per 5,000 people in their legal service area, a number that is 52.7 percent above the national average.

Figure 12. US Public Library - Internet PCs Per 5,000 People by Locale, FY2009

The number of uses of Internet PCs is a relatively new data element, which was first introduced in the FY2006 PLS. Internet PC usage per capita was 1.23 in FY2009, an increase of 6.3 percent since FY2006. Internet PC usage per 1,000 visits was 230.0, a decrease of 4.7 percent over the prior four years. Usage patterns favor urban areas (Figure 13), where usage was 243.6 per 1,000 visits, 5.9 percent higher than the national average.

Figure 13. US Public Library - PC uses Per 1,000 Visits by Locale, FY2009

Source: Public Library Survey, FY2009, Institute of Museum and Library Services

## Collections

One of the more striking trends over the past 10 years is the changing face of public library collections. Despite some fluctuations, the number of print materials has shown an overall decline in the past decade (Figure 14), from 2,859 print materials (per 1,000 people) in FY2000 to 2,745 in FY2009, a decrease of 4.0 percent. While the per-capita number of print materials has been declining, the amount of non-print materials has increased (Figure 15). Audio and video materials in public library collections have grown since FY2000. Additionally, the number of electronic book (e-book) volumes was added to the PLS in FY2003, which provides for an examination of the role these materials play in the composition of public library collections. The number of all three types of non-print materials per 1,000 people has increased. There were 178 audio materials per 1,000 people in FY 2009 , up 5.9 percent from FY2008 and up 48.2 percent over 10 years. Similarly, there were 171 video materials per 1,000 people, an increase of 2.7 percent since FY2008 and more than double (105.8 percent) over the prior 10 years. Finally, there were 51 e-books per 1,000 people, up 13.0 percent from FY2008 and an increase of 224.3 percent since the addition of e-book volumes to the PLS data collection in FY2003.

Figure 14. Public Library Collections: Print Materials Per 1000 People, FY2000-2009

Figure 15. Public Library Collections: Non-print Materials Per 1,000 People, FY2000-2009

The decline in print materials is not an indication of shrinking collections. Total materials in public library collections were over 934.8 million, an increase of 14.8 percent since FY2000. This decrease in the number of print materials per capita is an indication of a change in the nature and composition of public library collections and an indication of the more varied types of materials found in contemporary public libraries. Although print materials are still the largest proportion of most public library collections, the ratio of print to non-print materials has changed significantly over the past 10 years (Figure 16). In FY2000, print materials comprised 93.4 percent of public library collections; in FY2009, this had dropped to 87.3 percent. In contrast, audio and video materials combined made up only 6.6 percent of collections in FY2000, but this proportion increased to 11.1 percent in FY2009. Although still a small proportion of the total collections, e-books comprised 1.6 percent of the total public library collection in FY2009, which is an increase of 89.2 percent since FY2004.

Figure 16. Composition of Public Library Collection By Material (Percent of Total Collection), FY2000-2009

| Material | FY2000 | FY2004 | FY2009 |
| :--- | :---: | :---: | :---: |
| Print | $93.4 \%$ | $90.7 \%$ | $87.3 \%$ |
| Audio | $3.9 \%$ | $4.4 \%$ | $5.7 \%$ |
| Video | $2.7 \%$ | $4.1 \%$ | $5.4 \%$ |
| E-Book | - | $0.9 \%$ | $1.6 \%$ |

Source: Public Library Survey, FY2000-2009, Institute of Museum and Library Services/National Center for Education Statistics

Differences in collection composition can be seen between localities. Public libraries in rural areas had more print and e-book volumes per capita than other locales in FY2009, with 3420.1 print and 131.3 ebook materials per 1,000 people (Figures 17 and 18), levels that are 24.6 percent and 157.5 percent above the national average, respectively. However, public libraries in urban areas have larger collections. The average number of print volumes in urban public libraries was 569,451 in FY2009, which is 543.8 percent above the national average of 88,445 . Similarly, the average number of e-book volumes in urban public libraries was 4,288 in FY2009, 161.1 percent over the national average.

## Programs

## Number of programs offered

Public libraries offered 3.7 million programs to the public in FY2009, over 2.3 million of which were children's programs. This is an increase in the number of programs offered of 7.6 percent and 2.6 percent for total and child-focused programs from FY2008. Children's programs comprise 64.1 percent of all public library programming in FY2009, a decrease of 4.6 percent from the prior year. In addition to collecting information on programming for children, in FY2009 we introduced questions to the PLS about programs designed for young adults. Public libraries offered 263.5 thousand programs for young adult programs in FY2009, making up 7.1 percent of all programs offered in U.S. public libraries.

The number of programs per capita has increased since FY2004 (Figure 19), the first time this information was collected in the PLS. This increase in programs per capita suggests that public libraries have not only kept pace with population growth, but also responded to market demand for programming. Public libraries conducted 62.4 programs per 5,000 people in FY2009, an increase of 36.1 percent since FY2004. They also provided 40.0 children's programs per 5,000 people, an increase of 20.9 percent since FY2005. Finally, public libraries offered 4.4 programs per 5,000 people for young adults in FY2009.

The nature of this service has clear patterns based on locality (Figure 20), with public libraries in rural areas offering more programs per capita. Public libraries in rural areas offered 82.2 programs per 5,000 people and 54.8 children's programs per 5,000 people, levels that were 31.8 percent and 36.9 percent above the national average, respectively. In contrast, public libraries in urban areas offered fewer programs per capita. Taken in the context of locality, this highlights the different demands and how these demands can be met by public libraries in urban and rural contexts. Because service areas in urban areas cover a larger number of people, fewer programs are needed to reach more people. In contrast, public libraries in rural areas serve a larger geographic area and reach a smaller population, requiring these libraries to offer more programs in order to reach the same number of people.

Program attendance per capita is also on the rise, suggesting that public libraries are offering more programs to keep pace with the demand (Figure 21). Attendance for all programs in FY2009 was 1453.5 per 5,000 people, up 22.4 percent since 2004, and attendance at children's programs was 1036.5 per 5,000 people, up 11.9 percent since 2000. Locality trends are present for per-capita program attendance (Figure 22). Programs at rural public libraries have the highest attendance rates for total programs and children's programs, at 11.6 percent and 13.8 percent higher than the national average.

Figure 21: US Public Library - Program Attendance Per 5,000 People, FY2000-2009

Source: Public Library Survey, FY2000-2009, Institute of Museum and Library Services/National Center for Education Statistics

Figure 22. US Public Library Programs by Locality Program Attendance Per 5,000 People, FY2009

Program attendance per visit is an indicator of how many people, of all the people who visit public libraries, attend a program while they are there. Overall, program attendance for all programs was 54.3 per 1,000 visits in FY2009, an increase of 6.6 percent since FY2004 (Figure 23). Per-visit attendance for children's programs has declined over the prior 10 years, with attendance rates of 38.7 per 1,000 visits, down 10.0 percent since FY2000. Analysis by locality shows similar trends as for the per capita attendance. Rates of program attendance in FY2009 were highest for public libraries in towns and rural areas (Figure 24). Overall, program attendance per 1,000 visits for towns and rural areas was 16.3 percent and 23.6 percent above the national average, respectively; for children's programs, rates were 22.7 percent and 26.0 percent above the national average.

Figure 23. US Public Library - Program Attendance Per 1,000 Visits, FY2000-2009

Average program attendance is a metric of the average number of people who attend a program in a public library. In general, smaller average attendance is better, allowing for more individual attention, similar to class size in school settings. Average attendance for all programs was 23.3 in FY2009 (Figure 25). This is a decrease in average program size of 2.6 percent from FY2008 and a decrease of 10.1 percent since FY2004. Average attendance for children's programs was 25.9 in FY2009, which is decrease of 10.0 percent since FY2005. Average attendance at programs for young adults was 16.7.

In FY2009, average attendance at programs in public libraries was highest in urban areas and lowest in rural areas (Figure 26). In rural public libraries, average program attendance was 19.7, which was 15.3 percent below the national average, and average attendance at children's programs was 21.5 , which was 16.9 percent below the national average. Average attendance for programs at urban public libraries was 7.1 percent and 6.1 percent above the national average for total and children's programs, respectively.

Figure 26. US Public Library Programs by Locality Average Program Attendance, FY2009

## Staffing

In FY2009, there were 48,015 librarians working at public libraries in the United States, 32,977 (68.7 percent) of whom have Master's degrees in library science accredited by the American Library Association (ALA-MLS degrees). In addition to librarians, public libraries employ 96,246 paid staff.

Staffing at public libraries has remained stable over the past 10 years (Figure 27). The number of paid staff members per 25,000 people was 12.1 at public libraries in FY2009. Of those paid staff per 25,000 people, 4.0 were librarians. For both paid staff and librarians, the 10 -year change was less than 1.0 percent.

Figure 27: US Public Library - Paid Staff and Librarians Per 25,000 People, FY2000-2009

The percent of librarians with ALA-MLS degrees was 68.7 percent in FY2009 (Figure 28). Like staffing overall, this metric has also remained fairly flat since FY2000, with an increase of 0.3 percent over 10 years. In contrast, the number of library systems with at least one ALA-MLS degreed librarian on staff has increased over the study period. Of the 9,225 public libraries, 4,464 ( 48.4 percent) have an ALA-degreed librarian on staff. The percent of public libraries with an ALA-MLS degreed librarian on staff has increased over 10 years to 48.4 percent, a gain of 8.9 percent since FY2000. Taken together, the stability in the proportion of librarians with ALA-MLS degrees and the growth in the percent of libraries with an ALAMLS degreed librarian indicate that there has been a change in the distribution of degreed librarians across public libraries.

This change in the distribution of ALA-MLS degreed librarians across public libraries is illustrated through locality analyses. Almost all public libraries in urban areas have at least one librarian with an ALA-MLS degree, a rate that is twice that of the national average (Figure 29). In comparison, less than one quarter of public libraries in rural areas have at least one ALA-MLS degreed librarian on staff. A similar pattern is seen in the distribution of librarians with ALA-MLS degrees. Most librarians working at public libraries in urban and suburban areas have an ALA-MLS degree, at rates that are 26.9 percent and 16.2 percent higher than the national average. In contrast, fewer than half of public librarians working in towns and rural areas have an ALA-MLS degree.

Source: Public Library Survey, FY2000-2009, Institute of Museum and Library Services/National Center for Education Statistics

Figure 29. US Public Library Staffing by Locality Percent of Libraries and Librarians with ALA-MLS, FY2009

## Operating Revenues and Expenditures

Total revenue for U.S. public libraries was $\$ 11.59$ billion in FY2009, a 1.8 percent increase over FY2008 and a 10 -year increase of 50.5 percent (Figure 30). Total expenditures were $\$ 10.95$ billion in FY2009, which were an increase of 2.1 percent from FY2008 and a 10 -year increase of 55.8 percent.

Total revenue and expenses per capita have also evidenced an increasing trend over 10 years (Figure 31). In FY2009, total revenue per capita was $\$ 39.01$, a 10 -year increase of 8.8 percent; total expenditures per capita were $\$ 36.84$, a 10-year increase of 12.6 percent. Locality analyses indicate that much of the financial metrics are driven by urban and suburban public libraries (Figure 32). Public libraries in suburban areas had the highest levels of per capita revenue and expenditures in FY2009, at $\$ 44.50$ and $\$ 42.10$, respectively, both of which were 14 percent above the national average. Public libraries in towns and rural areas had the lowest levels of per capital revenue and expenditures. There was also diversity in the levels of per capita revenue and expenditures at the state level (Figure 33). On average states invested, through total revenue, $\$ 38.59$ per person into public libraries; this funding ranged across states from a low of $\$ 16.46$ per person to a high of $\$ 77.34$ per person.

Figure 31. US Public Library Revenue and Expenditures: Per Capita Operating Revenue and Per Capita Expenditures, FY2000-2009 (in constant 2009 dollars)

Figure 32. US Public Library - Per Capita Operating Revenue and Expenditure by Locality, FY2009

Figure 33. US Public Library - Operating Revenue Per Capita By State, FY2009

The 10 years of the study period showed a change in funding patterns for public libraries in the United States (Figure 34). Funding from local government to the operating revenue of public libraries was $\$ 9.76$ billion in FY2009, an increase of 32.8 percent since FY2000 (in constant 2009 dollars). In contrast, funding from state government to public library operating revenue was $\$ 0.87$ billion in FY2009, a decrease of 28.4 percent over 10 years. These changes, an increase in revenue from local governments and a decrease from states, are concomitant with changes in the proportion of operating revenue coming from all sources. The percentage of total operating revenue coming from local sources has changed from 77.0 percent in FY2000 to 84.2 percent in FY2009, a 10-year increase of 9.2 percent. In contrast, the portion of contributions from state sources has decreased from 12.8 percent in FY2000 to 7.5 percent in FY2009, a 10-year decrease of 41.1 percent.

This distribution of funding varies widely from state to state. In many states, public libraries received more than 90 percent of their 2009 revenue from local governments (Figure 35). However, 7 states, including West Virginia and Rhode Island, received less than 70 percent of their annual revenue from local sources. The converse is seen in the distribution of revenue from state governments. In the majority of states, state-level government funds less than 5 percent of public library operating revenues (Figure 36). In the ten states that had contributions of less than one percent to annual revenue, contributions from local governments to the FY2009 operating revenues were 90 percent or higher. However, there were nine states, including Ohio and Pennsylvania, in which state governments provided over 10 percent of the annual revenue to public libraries in FY2009, ranging from levels of 12.6 to 88.7 percent.

Figure 35. US Public Library - Percent of Operating Revenue from Local Government By State, FY2009

Figure 36. US Public Library - Percent of Operating Revenue from State Government By State, FY2009

## Service Outlets, Legal Basis and Interlibrary Relationships

Most public libraries ( 85.3 percent) are public agencies connected to some form of local government. In FY2009, 52.9 percent of public libraries were part of a municipal government, 14.7 percent were part of a separate government entity referred to as a library district, 9.8 percent were part of a county or parish, 3.4 percent had a multi-jurisdictional legal basis under an intergovernmental agreement, 2.0 percent were part of a school district, 1.0 percent were part of a city/county, and 1.5 percent reported a legal basis of "other". The remaining 14.8 percent of public libraries were operated by nonprofit associations or agencies, which means that although they were privately controlled, they met the legal definition of a public library in the states in which they were located (Table 5). ${ }^{6}$

Although most public libraries report single jurisdictions, many belong to broader service networks. A majority of public libraries ( 76.7 percent) were members of a federation or cooperative service, and 1.2 percent of which served as the headquarters of a federation or cooperative service. The remaining public libraries ( 23.3 percent) were not a part of a federation or cooperative service (Table 7).

[^4]
## Analysis by Locality

Library services are delivered in many different types of communities across the United States. Almost half (47.8 percent) of public library administrative entities are in a rural area (Figure 37), which serves 12.3 percent of the population. In contrast, relatively few ( 5.3 percent) public libraries are located in urban areas that serve 35.6 percent of the population. Similar to the findings based on administrative entities, a large number ( 39.3 percent) of library outlets are located in rural areas (Figure 38). In 17 states over 50 percent of the outlets are located in rural areas. Eight of these - Alaska, lowa, Kansas, Maine, North Dakota, Nebraska, South Dakota, and Vermont - have over 75 percent of their outlets in rural areas. Geographic comparisons such as these provide a new way to understand the nature of library services across the United States. As seen above, an examination of metrics in which locality is incorporated can provide a greater understanding of how public library services and operations can differ greatly depending upon the location.

Figure 37. Number of Public Libraries by Locale

| Type | Number | Percent | Subtype | Number | Percent | Percent of <br> Population |
| :--- | ---: | ---: | :--- | ---: | ---: | ---: |
| Urban | 490 | $5.3 \%$ | Large City | 73 | $0.8 \%$ | $35.6 \%$ |
|  |  |  | Midsize City | 116 | $1.3 \%$ |  |
|  |  |  | Small City | 301 | $3.3 \%$ |  |
| Suburban | 2,079 | $22.5 \%$ | Large Suburb | 1,697 | $18.4 \%$ | $36.9 \%$ |
|  |  |  | Midsize Suburb | 222 | $2.4 \%$ |  |
|  |  |  | Small Suburb | 160 | $1.7 \%$ |  |

## Methodology

## Analyses

In this report we present statistics for metrics related to aspects of financial, operational, and service activities in public libraries in the United States. National level summaries of these metrics are presented for FY2009, and 10-year trends are presented for most metrics from FY2000 through FY2009. Some data elements, such as the number of children's programs offered, were added to the survey more recently. For analyses of these metrics, changes will be reported based on the fiscal year in which the data element was introduced. In some cases, metrics are also broken out and presented by state or by locality.

For long-term trends, statistics are often presented in per capita metrics, which control for population growth and allow for standardized comparison of metrics over time. For this we used the unduplicated population of the legal service area served by each public library. ${ }^{7}$ In addition to analyses based on perperson in a public library's service area, trends in services are also examined in terms of the number of visitors. By examining both per-capita and per-visit trends, we can see not only the role that public libraries play in their communities at-large, but also how people who come to public libraries use the resources available.

For financial trends that report dollar amounts over time, such as 10-year revenue trends, metrics are presented in constant dollars. Constant dollars are an adjusted value of currency that accounts for inflation. We use this adjustment in order to compare monetary values from one period to another. For the present analyses, inflation was accounted for using a GDP (gross domestic product) deflator, ${ }^{8}$ as shown in Equation 1:

$$
\begin{equation*}
\text { GDP Deflator }=\frac{\text { Nominal GDP }}{\text { Real GDP }} \tag{1}
\end{equation*}
$$

In general, a real value is one in which the effect of inflation have been taken into account, and a nominal value is one in which the effect have not. Thus, the Real GDP is the value of all the goods and services produced in the United States expressed relative to some base year, and the Nominal GDP is the value of the same goods and services expressed in current prices.

To calculate the value in constant dollars for a target year, multiply a value from a base year by a ratio of the GDP Deflators from the base year and the target year. For example, to calculate the amount of revenue from the year 2000 in 2009 constant dollars, multiply the original value of revenue in 2000 by the ratio of the deflators from year 2009 to 2000 (see Equation 2).

$$
\begin{equation*}
\text { Value }_{\text {constant } 2009 \text { dollars }}=\text { Value }_{2000} \times \frac{\text { GDP Deflator } 2009}{\text { GDP Deflator } 2000} \tag{2}
\end{equation*}
$$

[^5]
## Locality

Beginning with the FY2008 data file, locale codes have been added to the outlet and administrative entity datasets. Locale codes identify general characteristics about where a public library is situated. The codes allow users to quickly identify which library outlets and administrative entities are located in cities, suburbs, towns, or rural areas. The locale codes are based on an address's proximity to an urbanized area, defined as a densely settled core with densely settled surrounding areas.

The locale code system classifies a territory into four major categories: urban, suburban, town, and rural. Each category has three sub-categories. For urban and suburban areas, gradations are based on population size: large, medium, or small. Towns and rural areas are sub-categorized based on their distance from an urbanized area: fringe, distant, or remote. The coding methodology was developed by the Census Bureau as a way to identify the location of public schools for the Common Core of Data, a survey collected by the National Center for Education Statistics.

These locale codes provide a new way to analyze library services in the United States. By incorporating objective measures of rurality and urbanicity into the data files, researchers and practitioners can benchmark services in a fundamentally different way by basing comparisons on community attributes as well as the attributes of the libraries themselves. In other words, library services in rural remote areas can now be compared to library services in other rural remote areas within the same state or across the country by using a standardized rurality/urbanicity metric that is applied consistently to each library in the country. Once communities of interest have been selected, comparisons can be made to any data that are available in the PLS, whether they are related to aspects of finance, operations, or service.

As of FY2008, each library outlet and administrative entity in the survey has been assigned one of the 12 locale codes. Starting with the FY2009 survey data files, bookmobiles and books-by-mail only outlets were assigned locale codes.

## Locale Code Descriptors

## City

|  | Large: Territory inside an urbanized area and inside a principal city with population of 250,000 or more <br> Midsize: Territory inside an urbanized area and inside a principal city with population less than 250,000 and greater than or equal to $100,000$ <br> Small: Territory inside an urbanized area and inside a principal city with population less than 100,000 |
| :---: | :---: |
| Suburb |  |
|  | Large: Territory outside a principal city and inside an urbanized area with population of 250,000 or more <br> Midsize: Territory outside a principal city and inside an urbanized area with population less than 250,000 and greater than or equal to 100,000 <br> Small: Territory outside a principal city and inside an urbanized area with population less than 100,000 |
| Town |  |
|  | Fringe: Territory inside an urban cluster that is less than or equal to 10 miles from an urbanized area <br> Distant: Territory inside an urban cluster that is more than 10 miles and less than or equal to 35 miles from an urbanized area <br> Remote: Territory inside an urban cluster that is more than 35 miles from an urbanized area |
| Rural |  |
|  | Fringe: Census-defined rural territory that is less than or equal to 5 miles from an urbanized area, as well as rural territory that is less than or equal to 2.5 miles from an urban cluster <br> Distant: Census-defined rural territory that is more than 5 miles but less than or equal to 25 miles from an urbanized area, as well as rural territory that is more than 2.5 miles but less than or equal to 10 miles from an urban cluster <br> Remote: Census-defined rural territory that is more than 25 miles from an urbanized area and is also more than 10 miles from an urban cluster |

${ }^{1}$ A public library is an administrative entity, the agency that is legally established under local or state law to provide public library service to the population of a local jurisdiction. The administrative entity may have a single public library service outlet, or it may have more than one outlet. The types of administrative structures for public libraries are reported in table 2 . See table 3 for additional information on outlets.
${ }^{2}$ The number of people in the geographic area for which a public library has been established to offer services and from which (or on behalf of which) the library derives revenue, plus any areas served under contract for which the library is the primary service provider. The determination of this figure is the responsibility of the state library agency and should be based on the most recent state population figures for jurisdictions in the state available from the State Data Center or other state sources.
${ }^{3}$ This is the total unduplicated population of those areas in the state that receive library services. The determination of this figure is the responsibility of the state library agency and should be based on the most recent state population figures for jurisdictions in the state. The population of unserved areas is not included in this figure.
${ }^{4}$ This is the most recent total population figure for the state that matches the local population figures that are submitted to IMLS. The state data coordinator for the state library agency is instructed to obtain the figure annually from the State Data Center or other state sources.
${ }^{5}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame.
NOTE: A state's total population of legal service area may be larger than the state's total unduplicated population of legal service area or the state population estimate because some public libraries have overlapping service areas. Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error.
Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

$\dagger$ Not applicable.
\# Rounds to zero.
${ }^{1}$ The number of people in the geographic area for which a public library has been established to offer services and from which (or on behalf of which) the library derives revenue, plus any areas served under contract for which the library is the primary service provider.
${ }^{2}$ Response rate is calculated as the number of libraries that reported population of legal service area, divided by the total number of libraries in the survey frame.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Librar Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey

| Outly ing areas |  |  |  |  |  |  |  |  |  |  |
| Guam | 1 | 1 | 1 | 6 | 1 | 100.0 | 5 | 100.0 | 1 | 100.0 |
| Puerto Rico | 34 | 5 | 1 | 42 | 33 | 100.0 | 9 | 100.0 | 1 | 100.0 | and (3) regularly scheduled hours (bookmobile stops) for being open to the public.

${ }^{2}$ Total stationary outlets is the sum of central and branch libraries.
${ }^{3}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame.
${ }^{4}$ Of the 9,225 public libraries in the 50 States and DC, 7,466 were single-outlet libraries and 1,759 were multiple-outlet libraries. Single-outlet libraries are a central library, bookmobile, or books-by-mail-only outlet. Multiple-outlet libraries have two or more direct service outlets, including some combination of one central library, branch(es), bookmobile(s), and/or books-by-mail-only outlets.
NOTE: Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

| 250,000 to 499,999 | 104 | 102 | 44 | 1,129 | 82 | 1,047 | 62 |
| 100,000 to 249,999 | 351 | 313 | 126 | 2,061 | 306 | 1,755 | 152 |
| 50,000 to 99,999 | 556 | 351 | 149 | 1,624 | 533 | 1,091 | 163 |
| 25,000 to 49,999 | 974 | 311 | 130 | 1,719 | 951 | 768 | 135 |
| 10,000 to 24,999 | 1,772 | 255 | 100 | 2,286 | 1,753 | 533 | 102 |
| 5,000 to 9,999 | 1,498 | 97 | 32 | 1,648 | 1,488 | 160 | 34 |
| 2,500 to 4,999 | 1,321 | 31 | 14 | 1,353 | 1,313 | 40 | 14 |
| 1,000 to 2,499 | 1,508 | 15 | 7 | 1,527 | 1,505 | 22 | 7 |
| Less than 1,000 | 1,057 | 2 | 1 | 1,059 | 1,056 | 3 | 1 |

${ }^{1}$ A bookmobile is a traveling branch library. It consists of at least one of the following: (1) A truck or van that carries an organized
collection of library materials; (2) paid staff; and (3) regularly scheduled hours (bookmobile stops) for being open to the public.
${ }^{2}$ Total stationary outlets is the sum of central and branch libraries.
${ }^{3}$ Of the 9,225 public libraries in the 50 States and DC, 7,466 were single-outlet libraries and 1,759 were multiple-outlet libraries. Singleoutlet libraries are a central library, bookmobile, or books-by-mail-only outlet. Multiple-outlet libraries have two or more direct service outlets, including some combination of one central library, branch(es), bookmobile(s), and/or books-by-mail-only outlets.
NOTE: The response rates are included in Table 3.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

Table 4. Percentage distribution of public libraries, by average number of weekly public service hours per outlet and state: Fiscal year 2009

| State | Number <br> of public libraries | Average number of weekly public service hours per outlet ${ }^{1}$ |  |  |  |  |  |  |  |  |

| Outly ing areas |  |  |  |  |  |  |  |  |  |  |
| Guam | 1 | 0 | 0 | 100.0 | 0 | 0 | 0 | 0 | 0 | 100.0 |
| Puerto Rico | 34 | 0 | 20.6 | 2.9 | 26.5 | 26.5 | 2.9 | 2.9 | 5.9 | 88.2 |

${ }^{1}$ These data are derived from the total public service hours per year and the total outlets (central, branch, bookmobile, and books-by-mail) of public libraries.
${ }^{2}$ Response rate is calculated as the number of libraries that reported public service hours, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

Table 4A. Percentage distribution of public libraries in the $\mathbf{5 0}$ states and the District of Columbia, by average number of weekly public service hours per outlet and population of legal service area: Fiscal year 2009

| Population of legal service area | Number of public libraries | Average number of weekly public service hours per outlet ${ }^{1}$ |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{array}{r} \hline \text { Less } \\ \text { than } 10 \end{array}$ | $\begin{array}{r} 10 \\ \text { to } 19 \\ \hline \end{array}$ | $\begin{array}{r} 20 \\ \text { to } 29 \\ \hline \end{array}$ | $\begin{array}{r} 30 \\ \text { to } 39 \\ \hline \end{array}$ | $\begin{array}{r} 40 \\ \text { to } 49 \\ \hline \end{array}$ | $\begin{array}{r} 50 \\ \text { to } 59 \\ \hline \end{array}$ | $\begin{array}{r} 60 \\ \text { to } 69 \\ \hline \end{array}$ | $\begin{array}{r} 70 \\ \text { or more } \\ \hline \end{array}$ |
|  |  | Percentage distribution |  |  |  |  |  |  |  |
| Total | 9,225 | 2.2 | 7.6 | 16.1 | 21.8 | 24.4 | 17.6 | 9.2 | 1.0 |
| 1,000,000 or more | 28 | 0 | 0 | 0 | 10.7 | 53.6 | 32.1 | 3.6 | 0 |
| 500,000 to 999,999 | 56 | 0 | 0 | 0 | 17.9 | 42.9 | 30.4 | 7.1 | 1.8 |
| 250,000 to 499,999 | 104 | 0 | 0 | 2.9 | 20.2 | 32.7 | 36.5 | 6.7 | 1.0 |
| 100,000 to 249,999 | 351 | 0 | 0.9 | 7.1 | 21.4 | 33.9 | 23.4 | 11.7 | 1.7 |
| 50,000 to 99,999 | 556 | 0 | 1.3 | 7.9 | 22.5 | 23.6 | 23.6 | 17.8 | 3.4 |
| 25,000 to 49,999 | 974 | 0 | 1.7 | 7.5 | 14.5 | 19.2 | 26.5 | 27.2 | 3.4 |
| 10,000 to 24,999 | 1,772 | 0.2 | 1.6 | 5.2 | 12.5 | 29.5 | 32.3 | 17.5 | 1.1 |
| 5,000 to 9,999 | 1,498 | 0.3 | 2.5 | 6.7 | 24.8 | 36.0 | 22.6 | 6.6 | 0.4 |
| 2,500 to 4,999 | 1,321 | 1.1 | 4.5 | 18.7 | 32.9 | 31.0 | 9.9 | 1.4 | 0.5 |
| 1,000 to 2,499 | 1,508 | 2.5 | 11.9 | 36.0 | 31.5 | 15.0 | 2.9 | 0.1 | 0.1 |
| Less than 1,000 | 1,057 | 13.5 | 34.7 | 34.0 | 13.0 | 3.8 | 0.8 | 0.1 | 0.2 |

${ }^{1}$ These data are derived from the total public service hours per year and the total outlets (central, branch, bookmobile, and books-by-mail) of public libraries.
NOTE: Detail may not sum to totals because of rounding. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for the outlying areas. The response rate is included in Table 4.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

Table 5. Percentage distribution of public libraries, by type of legal basis and state: Fiscal year 2009

| State | Number of public libraries | $\text { Type of legal basis }{ }^{1}$ |  |  |  |  |  |  |  |  |

${ }^{2}$ An organized local government authorized in a state's constitution and statutes and established to provide general government for a specific concentration of population in a defined area
${ }^{3}$ An organized local government authorized in a state's constitution and statutes and established to provide general government
${ }^{4}$ A multi-jurisdictional entity that is operated jointly by a county and a city.
${ }^{5}$ A public library that is operated jointly by two or more units of local government under an intergovernmental agreement.
${ }^{6}$ A public library that is privately controlled but meets the statutory definition of a public library in a given state.
${ }^{7}$ A public library that is under the legal basis of a school district.
${ }^{8}$ A local entity other than a county, municipality, township, or school district is authorized by state law to establish and operate a public library.
${ }^{9}$ This includes libraries under the legal basis of Native American Tribal Government and combined public/school libraries
${ }^{10}$ Response rate is calculated as the number of libraries that reported type of legal basis, divided by the total number of libraries in the survey frame. For item(s) with response rate below 100 percent, data for nonrespondents were imputed. Data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey

${ }^{1}$ The types of geographic service areas (Municipal government, County/parish, Metropolitan area, etc.) are from U.S. Census Bureau geography. Public libraries identified the geographic service area type that either exactly or most nearly described the geographic area for which the public library was established to offer services and from which (or on behalf of which) the library derives income, and any areas under contract for which the library is the primary service provider.
${ }^{2}$ Response rate is calculated as the number of libraries that reported geographic service area, divided by the total number of libraries in the survey frame. For item(s) with response rate below 100 percent, data for nonrespondents were imputed. Data was not imputed for outlying areas
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey

\# Rounds to zero
${ }^{1}$ Per capita and per 1,000 population are based on the total unduplicated population of legal service areas. The determination of the unduplicated figure is the responsibility of the state library agency and should be based on the most recent state population figures for jurisdictions in the state.
${ }^{2}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

Table 8A. Number of public library services and library services per capita in the $\mathbf{5 0}$ states and the District of Columbia, by type of service and population of legal service area: Fiscal year 2009

| Population of legal service area |  | Library visits |  | Reference transactions |  | Total circulation |  | Registered borrowers |  |

\# Rounds to zero.
${ }^{1}$ Per capita and per 1,000 population are based on the total unduplicated population of legal service areas. The determination of the unduplicated figure is the responsibility of the state library agency and should be based on the most recent state population figures for jurisdictions in the state.
${ }^{2}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

| Oregon | 127 | 2,539 | 12.0 | 3.5 | 100.0 | 4,786 | 1.3 | 93.7 |
| Pennsylvania | 458 | 7,232 | 11.4 | 3.0 | 99.1 | 9,092 | 0.8 | 98.7 |
| Rhode Island | 48 | 1,097 | 15.2 | 5.2 | 97.9 | 1,529 | 1.4 | 95.8 |
| South Carolina | 42 | 3,082 | 16.0 | 3.6 | 100.0 | 5,530 | 1.3 | 100.0 |
| South Dakota | 112 | 910 | 6.1 | 6.2 | 96.4 | 927 | 1.3 | 95.5 |
| Tennessee | 186 | 4,104 | 14.2 | 3.3 | 100.0 | 6,020 | 1.0 | 100.0 |
| Texas | 559 | 16,031 | 18.5 | 3.5 | 100.0 | 21,253 | 0.9 | 98.9 |
| Utah | 71 | 1,717 | 14.2 | 3.1 | 98.6 | 3,528 | 1.3 | 93.0 |
| Vermont | 184 | 941 | 5.1 | 7.8 | 94.0 | 850 | 1.4 | 91.3 |
| Virginia | 91 | 5,671 | 16.3 | 3.7 | 100.0 | 7,310 | 1.0 | 97.8 |
| Washington | 63 | 5,249 | 15.7 | 4.0 | 98.4 | 9,364 | 1.4 | 87.3 |
| West Virginia | 97 | 1,280 | 7.4 | 3.5 | 100.0 | 1,609 | 0.9 | 100.0 |
| Wisconsin | 380 | 4,887 | 10.7 | 4.3 | 100.0 | 7,808 | 1.4 | 98.7 |
| Wyoming Outly ing areas | 23 | 754 | 9.9 | 7.1 | 100.0 | 945 | 1.8 | 100.0 |
| Guam | 1 | 59 | 9.8 | 1.7 | 100.0 | 20 | 0.1 | 100.0 |
| Puerto Rico | 34 | 738 | 19.4 | 1.7 | 88.2 | 223 | 0.1 | 82.4 |

${ }^{\top}$ The number of users (not uses) per year was reported on the survey. Survey respondents were instructed to count a user who uses the library's Internet computers three times a week as three users. In this table, "uses" was substituted for "users" for meaningful per capita comparisons as there cannot be more "users" than the population base. Electronic resources include, but are not limited to, Internet (World Wide Web, e-mail, Telnet, other), online indexes, CD-ROM reference materials, soft ware, and the public library online catalog.
${ }^{2}$ The average per stationary outlet was calculated by dividing the total number of public-use Internet computers in central and branch outlets by the total number of such outlets. See Table 3 for number of service outlets.
${ }^{3}$ Per 5,000 population and per capita are based on the total unduplicated population of legal service areas. The determination of the unduplicated figure is the responsibility of the state library agency and should be based on the most recent state population figures for jurisdictions in the state.
${ }^{4}$ Response rate is the percentage of libraries that reported the item. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for the outlying areas.
NOTE: Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

## (Page is intentionally blank.)

Table 11A. Number of public-use Internet computers in public libraries and uses of Internet computers per year in the 50 states and the District of Columbia, by population of legal service area: Fiscal year 2009

Table 12. Number of public library materials and library materials per capita or per $\mathbf{1 , 0 0 0}$ population, by type of material and state: Fiscal year 2009

${ }^{1}$ These materials include books and serial back files in print.
${ }^{2}$ Per capita and per 1,000 population are based on the total unduplicated population of legal service areas. The determination of the unduplicated figure is the responsibility of the state library agency and should be based
on the most recent state population figures for jurisdictions in the state.
${ }^{3}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

## (Page is intentionally blank.)

Table 12A. Number of public library materials and library materials per capita or per $\mathbf{1 , 0 0 0}$ population in the $\mathbf{5 0}$ states and the District of Columbia, by type of material and population of legal service area: Fiscal year 2009

| Population of $\underline{\text { legal service area }}$ | Number of public libraries | Print materials ${ }^{1}$ |  | Audio |  | Video |  | Current print serial subscriptions |  |

${ }^{1}$ The average was calculated by dividing the total number of materials of each type by the total number of public libraries.
${ }^{2}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for the outlying areas.
NOTE: Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

See notes at end of table.

Table 16. Number of paid full-time-equivalent (FTE) staff in public libraries, by type of position; percentage of total librarians and total staff with "ALA-MLS" degrees; and number of public libraries with "ALA-MLS" librarians, by state: Fiscal year 2009—Continued

${ }^{1}$ Paid staff were reported in FTEs. To ensure comparable data, 40 hours was set as the measure of full-time employment (for example, 60 hours per week of part-time work by employees in a staff category
divided by the 40 -hour measure equals 1.50 FTEs). FTE data were reported to two decimal places but rounded to one decimal place in the table. Paid staff is one of four criteria used in the Public Libraries Survey to define a public library. Some states report public libraries that do not have paid staff but meet the definition of a public library under state law.
2"ALA-MLS": A Master's degree from a graduate library education program accredited by the American Library Association (ALA). Librarians with an "ALA-MLS" are also included in total librarians.
${ }^{3}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for the outlying areas.
${ }^{4}$ The number of "certified" librarians was reported in the Librarians with "ALA-MLS" column, as the state does not distinguish between Master's degrees from programs of library and information studies accredited by the American Library Association (ALA) and all other Master's degrees in library science awarded by institutions of higher education. Nationally, 7,091 Master's degrees in library science were awarded by institutions of higher education in 2008-09 (Digest of Education Statistics, 2010, [NCES 2011015], Table 283. U.S. Department of Education, National Center for Education Statistics. Washington, DC: Government Printing Office.)
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

${ }^{1}$ Paid staff were reported in FTEs. To ensure comparable data, 40 hours was set as the measure of full-time employment (for example, 60 hours per week of part-time work by employees in a staff category divided by the 40 -hour measure equals 1.50 FTEs). FTE data were reported to two decimal places. Paid staff is one of four criteria used in the Public Libraries Survey to define a public library. Some states report public libraries that do not have paid staff but meet the definition of a public library under state law.
${ }^{2}$ Response rate is calculated as the number of libraries that reported total paid FTE staff, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

Table 17A. Percentage distribution of public libraries in the 50 states and the District of Columbia, by number of paid full-time-equivalent (FTE) staff and population of legal service area: Fiscal year 2009

\# Rounds to zero.
${ }^{1}$ This includes federal funds, such as Library Services and Technology Act (LSTA) funds, that are distributed to public libraries through state library agencies. Other federal funds that are used by state library agencies or library cooperatives to provide services that benefit local public libraries are not included in the table because they are not received as income by public libraries.
${ }^{2}$ This includes monetary gifts and donations received in the current year, interest, library fines, fees for library services, or grants
${ }^{3}$ Response rate is calculated as the number of libraries that reported total income and/or all four sources of income, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey

Table 18A. Total operating revenue of public libraries and percentage distribution of revenue in the 50 states and the District of Columbia, by source of revenue

Table 19. Total per capita operating revenue of public libraries, by source of revenue and state: Fiscal year 2009_Continued

\# Rounds to zero.
${ }^{1}$ Per capita is based on the total unduplicated population of legal service areas.
${ }^{2}$ This includes federal funds, such as Library Services and Technology Act (LSTA) funds, that are distributed to public libraries through state library agencies. Other federal funds that are used by state library agencies or library cooperatives to provide services that benefit local public libraries are not included in the table because they are not received as income by public libraries.
${ }^{3}$ This includes monetary gifts and donations received in the current year, interest, library fines, fees for library services, or grants.
${ }^{4}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

Table 19A. Total per capita operating revenue of public libraries in the $\mathbf{5 0}$ states and the District of Columbia,

| Population of legal service area | Number of public libraries | Total per capita operating revenue ${ }^{1}$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total | Federal ${ }^{2}$ | State | Local | Other ${ }^{3}$ |
| Total | 9,225 | \$39.01 | \$0.16 | \$2.94 | \$32.83 | \$3.08 |

| South Dakota | 112 | 22,008 | 67.6 | 13.7 | 18.7 | 95.5 |
| Tennessee | 186 | 105,020 | 68.5 | 11.5 | 19.9 | 100.0 |
| Texas | 559 | 442,491 | 69.0 | 13.4 | 17.7 | 100.0 |
| Utah | 71 | 84,972 | 65.9 | 16.7 | 17.4 | 84.5 |
| Vermont | 184 | 20,234 | 64.8 | 11.6 | 23.6 | 92.9 |
| Virginia | 91 | 275,311 | 68.8 | 11.4 | 19.8 | 100.0 |
| Washington | 63 | 336,925 | 67.4 | 13.3 | 19.3 | 98.4 |
| West Virginia | 97 | 31,645 | 65.1 | 15.3 | 19.6 | 100.0 |
| Wisconsin | 380 | 215,818 | 69.4 | 11.6 | 19.0 | 100.0 |
| Wyoming | 23 | 30,123 | 71.7 | 9.7 | 18.7 | 100.0 |
| Outly ing areas |  |  |  |  |  |  |
| Guam | 1 | 1,454 | 71.5 | 2.0 | 26.6 | 100.0 |
| Puerto Rico | 34 | 3,193 | 57.8 | 16.7 | 25.5 | 29.4 |

${ }^{1}$ This includes all expenditures other than those for staff and collection, such as binding, supplies, repair or replacement of existing furnishings and equipment, and costs of computer hardware and software used to support library operations or to link to external networks, including the Internet. Includes expenditures for contracts for services, such as costs of operating and maintaining physical facilities, and fees paid to a consultant, auditor, architect, attorney, etc.
${ }^{2}$ Response rate is calculated as the number of libraries that reported total operating expenditures and/or all three types of expenditures, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Missing data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

${ }^{1}$ This includes all operating expenditures for electronic (digital) materials. Types of electronic materials include e-books, e-serials (including journals), government documents, databases (including locally mounted, full text or not), electronic files, reference tools, scores, maps, or pictures in electronic or digital format, including materials digitized by the library. Electronic materials can be distributed on magnetic tape, diskettes, computer software, CD-ROM, or other portable digital carrier, and can be accessed via a computer, via access to the Internet, or by using an e-book reader. This includes expenditures for materials held locally and for remote electronic materials for which permanent or temporary access rights have been acquired. It also includes expenditures for database licenses.
${ }^{2}$ This includes all operating expenditures for other materials, such as microform, audio, video, DVD, and materials in new formats.
${ }^{3}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Missing data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

$\frac{\text { Puerto Rico }}{}{ }^{1}$ Per capita is based on the total unduplicated population of legal service areas.
${ }^{2}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Missing data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin
Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

\# Rounds to zero.
${ }^{1}$ This includes federal funds, such as Library Services and Technology Act (LSTA) funds, that are distributed to public libraries through state library agencies. Other federal funds that are used by state library agencies or library cooperatives to provide services that benefit local public libraries are not included in the table because they are not received as income by public libraries
${ }^{2}$ This includes monetary gifts and donations received in the current year, interest, library fines, fees for library services, or grants.
${ }^{3}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Missing data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands).
Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

${ }^{1}$ Response rate is calculated as the number of libraries that reported the item, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Missing data were not imputed for the outlying areas. NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

Table 27A. Total capital revenue of public libraries in the 50 states and the District of Columbia and percentage distribution of public libraries, by total capital revenue category and population of legal service area: Fiscal year 2009

| Population of | Number <br> of public <br> libraries | Total capital revenue |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

${ }^{1}$ Response rate is calculated as the number of libraries that reported total capital expenditures, divided by the total number of libraries in the survey frame. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Missing data were not imputed for the outlying areas.
NOTE: Detail may not sum to totals because of rounding. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands). Missing data were not imputed for nonresponding outlying areas.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

${ }^{1}$ This is the total number of single-outlet public libraries (centrals) on the public library outlet data file.
${ }^{2}$ The response rate is the total number of single-outlet public libraries (centrals) on the public library outlet data file divided by the number of single-outlet public libraries (centrals) on the public library data file.
${ }^{3}$ The average square footage is calculated by dividing the total square footage reported by single-outlet public libraries (centrals) by the total number of such outlets reporting the data.
${ }^{4}$ Per 1,000 population data are based on the total unduplicated population of legal service areas. Only single-outlet public libraries (centrals) that reported square footage are included.
${ }^{5}$ The square footage response rate is calculated by dividing the total number of single-outlet public libraries (centrals) reporting square footage by the total number of single-outlet public libraries (centrals) on the public library outlet data file. IMLS ensures as part of edit follow-up that the number of outlets reported on the public library outlet data file equals the number reported on the public library data file.
NOTE: Square footage is collected only from central and branch outlets (not from bookmobiles and books-by-mail-only outlets), and missing data are not imputed. Data were not reported by the following outlying areas (American Samoa, Northern Marianas, and Virgin Islands).
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

total number of such outlets reporting the data.
${ }^{3}$ Per 1,000 population data are based on the total unduplicated population of legal service areas. Only multiple-outlet public libraries that reported square footage for their central outlets are included in the "Per 1,000 population" figure for centrals. Only multiple-outlet public libraries that reported square footage for all of their branch outlets are included in the "Per 1,000 population" figure for branches.
NOTE: Square footage is collected only from central and branch outlets (not from bookmobiles and books-by-mail-only outlets), and missing data are not imputed. The response rates are included in Table 30.
SOURCE: Institute of Museum and Library Services, Public Libraries Survey, Fiscal Year 2009. Data users who create their own estimates using data from this report should cite the Institute of Museum and Library Services as the source of the original data only. Although the data in this table come from a census of all public libraries and are not subject to sampling error, the census results may contain nonsampling error. Additional information on nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

- Not available
$\dagger$ Not applicable.
${ }^{1}$ This is the total number of central outlets on the public library outlet data file.
${ }^{2}$ The response rate is the number of central outlets on the public library outlet data file divided by the number of centrals on the public library data file
${ }^{3}$ The average square footage of central outlets is calculated by dividing the total square footage reported by central outlets by the total number of such outlets reporting the data.
 that the number of outlets reported on the public library outlet data file equals the number reported on the public library data file.
 (American Samoa, Northern Marianas, and Virgin Islands)

 nonsampling error, response rates, and definitions may be found in Appendix B of the report for the Public Libraries Survey.

${ }^{1}$ This is the total number of branch outlets on the public library outlet data file.
${ }^{2}$ The response rate is the number of branch outlets on the public library outlet data file divided by the number of branches on the public library data file
${ }^{3}$ The average square footage of branch outlets is calculated by dividing the total square footage reported by branch outlets by the total number of such outlets reporting the data.
 follow-up that the number of outlets reported on the public library outlet data file equals the number reported on the public library data file.
 (American Samoa, Northern Marianas, and Virgin Islands).

## Appendix B-Technical Notes

## Reporting Period

The FY2009 PLS requested data for state fiscal year 2009. In some states, the FY reporting period varies among local jurisdictions. (These states are listed in the Other column in Table B-1 below). However, each public library provided data for a 12-month period. Note: The FY starting date and ending date of each public library are included on the data file.

Table B-1. Reporting periods of public libraries: Fiscal Year 2009

## Calculations Included in the Tables

Percentages rather than raw numbers are used in some tables to provide a clearer picture of data patterns. Percentage distributions may not sum to 100 due to rounding. To obtain a raw number from a percentage distribution table, multiply the percentage for the item by the total for the item. (The total may be in a different table.) For example, in Table 5, the number of public libraries in the 50 states and the District of Columbia with municipal government as their legal basis is 4,880 (9,225 x 0.529). The percentages are rounded, so multiplying a percentage by a total may not give an exact count for a desired category.

Selected tables include per capita values for some items and per 1,000 population or per 5,000 population values for others (e.g., Tables 8 and 11). Scales (per capita, per 1,000, etc.) were selected to provide the clearest display of differences across categories in the data. The calculations are based on the total unduplicated population of legal service areas (instead of the total population of legal service areas) in order to eliminate duplicative reporting due to overlapping service areas. The state population estimate was not used as the basis for the calculations because some states have unserved populations. See Population items below for more information.

## Caveats for Using the Data

The data include imputations, at the unit and item levels, for nonresponding libraries. See the Imputation section for a discussion of the imputation methodology. Comparisons to data prior to FY 1992 should be made with caution, as earlier data do not include imputations for nonresponse, and the percentage of libraries responding to a given item varied widely among the states.

State data comparisons should be made with caution because of differences in reporting periods (see Table B-1) and adherence to survey definitions. The definitions used by some states in collecting data from their public libraries may not be consistent with the PLS definitions. The 1994 NCES Report on Coverage Evaluations of the Public Library Statistics Program (NCES 94-430) and the 1995 NCES Report on Evaluation of Definitions Used in the Public Library Statistics Program (NCES 95-430) address issues of consistency in definitions among states. For information on these reports, visit the NCES web site at:
http://nces.ed.gov/pubsearch/getpubcats.asp?sid=041\#052.
The District of Columbia, while not a state, is included in this report. Special care should be used in comparing data for a city to state data. Caution should also be used in comparing Hawaii's data to other states as all public library data are reported under one entity, the Hawaii State Public Library System.

## Survey Items

A few key survey items are discussed below. The definitions of items included in this report are provided in the survey questionnaire in Appendix C.

Library visits and reference transactions. Public libraries reported annual library visits and annual reference transactions based on actual counts, if available. Otherwise, annual estimates were provided based on a typical week in October, multiplied by 52.

Population items. The PLS has three population items: (1) Population of Legal Service Area for each public library, (2) Total Unduplicated Population of Legal Service Areas for each state, and (3) State Total Population Estimate. The population data are provided by the state library agency. The methods of calculation of the first two items vary significantly among states, and the state reporting periods also vary. The Total Unduplicated Population of Legal Service Areas does not include unserved areas and may vary from data provided by sources using standard methodology (e.g., the Census Bureau).

The total Population of Legal Service Area for all public libraries in a state may exceed the state's Total Unduplicated Population of Legal Service Areas or the State Total Population Estimate. This
happens in states where there are overlaps in population of legal service areas served by individual libraries, resulting in the same population being counted twice. Twenty-nine states had such overlapping service areas in FY2009. (See following table.)

## Table B-2. States with public libraries with overlapping

 service areas: Fiscal Year 2009| Arkansas | Minnesota |
| :--- | :--- |
| Arizona | Mississippi |
| Colorado | North Dakota |
| Connecticut | Nebraska |
| Florida | New Hampshire |
| lowa | New Jersey |
| Idaho | New Mexico |

| Kansas | Pennsylvania |
| Kentucky | Rhode Island |
| Louisiana | South Dakota |
| Maine | Vermont |
| Massachusetts | Virginia |
| Maryland | Puerto Rico |
| Michigan |  |

SOURCE: Institute of Museum and Library Services, Survey of Public Libraries in the United States, Fiscal Year 2009.

To enable meaningful state comparisons using total Population of Legal Service Area data (for example, the number of print materials per capita), the Population of Legal Service Area data were adjusted to eliminate duplicative reporting due to overlapping service areas. The Public Library Data File includes a derived unduplicated population of legal service area figure for each library for this purpose (the variable is called POPU_UND). This value was prorated for each library by calculating the ratio of a library's Population of Legal Service Area to the state's total Population of Legal Service Area and applying the ratio to the state's Total Unduplicated Population of Legal Service Areas. (The latter item is a single, state-reported figure found on the Public Library State Summary/State Characteristics Data File; the variable is called POPU_UND on this file also.)

Paid Full-Time-Equivalent (FTE) Staff. Paid staff were reported in FTEs (Table 16). To ensure comparable data, 40 hours was set as the measure of full-time employment (for example, 60 hours per week of part-time work by employees in a staff category divided by the 40-hour measure equals 1.50 FTEs). FTE data were reported to two decimal places (rounded to one decimal place in the tables).

## Survey Universe

The PLS is designed as a universe survey. The survey frame consists of 9,277 public libraries ( 9,225 public libraries in the 50 states and the District of Columbia and 52 public libraries in the outlying areas of Guam, the Northern Mariana Islands, Puerto Rico and the Virgin Islands), as identified by state library agencies. (Public libraries in one outlying area, American Samoa, are not included in the survey frame because their state library agency has never responded to the request for participation in the survey. Because their public libraries have not been identified, they are not included in the response rate calculations.) The survey frame (and the survey response rates in the next section) includes 295 public libraries that do not meet all the criteria in the FSCS Public Library Definition (see Appendix C, item 203 of the Administrative Entity definitions for the criteria). These libraries are included because they qualify as public libraries under state law. Military libraries that provide public library service and libraries that serve residents of institutions are not included. Data
were not systematically collected from public libraries on Native American reservations, although 51 such libraries were reported.

## Survey Response

Unit response. A total of 9,082 of the 9,277 public libraries in the survey frame responded to the FY2009 PLS (including Guam and Puerto Rico), for a unit response rate of 97.9 percent. Respondents to the survey are defined as public libraries for which the following data were reported: population of the legal service area and at least three of the five following items: total paid employees, total operating revenue, total operating expenditures, print materials, and total circulation. (Note: Some individual survey items, such as population of legal service area, service outlets, and type of legal basis have a 100.0 percent response rate for their state because the state library agency provided these data for all public libraries in their state).

Total response. The base for calculating response rates to individual survey items is the total number of libraries in the survey frame, including unit nonrespondents.

Data File and Publication Response Rates. The total response rates on the data file differ from the total response rates in the published report because the nonresponding outlying areas of the Northern Mariana Islands and the Virgin Islands are included on the data file but are not included in the publication. The responding outlying areas of Guam and Puerto Rico are included in both the data file and the publication. The response rates for the outlying territories are not included in the national totals in the publication.

## Data Collection

The FY2009 PLS was released to the states over the Internet on December 9, 2009. States were placed into one of three reporting groups (with survey due dates of April 14, August 4, or August 25, 2010), based on their fiscal cycles or claim of extraordinary reporting hardship. States reported their data over the Internet via a web-based reporting system called WebPLUS (Web Public Library Universe System). WebPLUS was developed by the Census Bureau (the data collection agent). Edit follow-up was completed in November of 2010. The editing process is described below.

## Editing

State level. The respondent generates an edit report following direct data entry or import of their data into WebPLUS. The edit report, which can be viewed on-screen or printed, is used to identify and correct any errors, and to confirm the accuracy of data that generated edit warnings but required no change, before submitting the final file to the Census Bureau. In the FY2009 PLS, four types of edit checks were performed:

1. Relational edit checks. This is a data consistency check between related data elements. For example, an edit message is generated if the number of "ALA-MLS" Librarians (librarians with master's degrees from programs of library and information studies accredited by the American Library Association) is greater than "Total Librarians".
2. Out-of-range edit checks. This is a range check that compares the data reported for an item to the "acceptable range" of numeric values for the item. For example, an edit message is generated if average Public Service Hours per outlet per week is less than 11.16 or greater than 129.67, or if the current year/past year change in Children's Circulation is less than 0.30 or greater than 3.44.
3. Arithmetic edit checks. This is an arithmetical accuracy check of a reported total and its parts to the generated total. For example, an edit message is generated if Total Operating Revenue is not equal to the sum of its parts (Local Government Revenue, State Government Revenue, Federal Government Revenue, and Other Revenue).
4. Blank, zero, or invalid data edit checks. This is a check of reported data against acceptable values. For example, an edit message is generated if the Reporting Period Start Date is missing, or Print Materials is 0 , or the Legal Basis Code is not a valid code.

The WebPLUS application generates state summary tables (showing state totals for all numeric data items) and single-library tables (showing data for individual public libraries in a state). State item response tables are also generated. Respondents were encouraged to review the tables for data quality issues before submitting their data to IMLS. State data submissions also included a signed form from the Chief Officer of the State Library Agency certifying the accuracy of the data.

National level. The Census Bureau and IMLS reviewed and edited the state data submissions, working closely with the PLS State Data Coordinators.

## Imputation

Imputation is a procedure for estimating a value for a specific data item where the response is missing. This section describes the imputation methods that were used to fill in the missing data items for the 2009 survey year.

The responding and non-responding libraries were sorted into imputation cells based on OBE region code (Bureau of Economic Analysis region code, formerly Office of Business Economics) and the size of the population. Each state is assigned an OBE region code (e.g. 01- New England (CT ME MA NH RI VT). The cumulative root frequency method was used to determine the imputation cells. For more information about the cumulative root frequency method, see Cochran, William. Sampling Techniques, 3rd edition. John Wiley \& Sons, Inc. p. 129. In survey year 2009, a total of 51 items were imputed.

The imputation for non-responding libraries was performed using the data calculated from respondents in their imputation cells. Item imputation was performed on each record with nonresponsive variables. Following are descriptions of each imputation method used for the Public Libraries Survey (PLS).

Imputations were performed in two stages. In the first stage, imputations were carried out for nearly all missing values using the following methods: prior year times mean growth rate, adjusted cell mean, cell mean, prior year ratio, cell median ratio, direct substitution of prior year data, and cell median. In the second stage, imputed values are adjusted for some missing values (based on the variable) using the following methods: obtained value by relationship of total to detail items, raking, special imputations, and consistency checks.

## First Stage: Initial imputations

For each missing value, one of these methods of imputation was used to fill out the FY2009 PLS dataset.

METHOD 1: Prior year multiplied by mean growth rate. The imputed value is equal to the prior year reported value for a nonrespondent times the cell mean growth rate. In this method, the prior year reported data can be as old as four years. The growth rate is calculated by the mean of the growth rates of all the respondents in an imputation cell of libraries with similar characteristics to the nonresponding library. The growth rate is based on libraries that responded in the current year and the prior year.

METHOD 2: Adjusted Cell Mean. The imputed value is equal to the mean of all the respondents in
a cell for the item times an adjustment factor. The adjustment factor is the ratio of the library's Population of Legal Service Area to the cell mean Population of Legal Service Area.

METHOD 3: Cell mean. The imputed value is equal to the mean of all respondents in a cell for that item.

METHOD 4: Prior year ratio to another item. The imputed value for a missing item for a respondent is equal to the respondent's current year data for a highly correlated item times the ratio of prior year data for the item to be imputed to a prior year's data for the highly correlated item.

METHOD 5: Cell median ratio with another item. The imputed value for a missing item for a respondent is equal to the respondent's current year data for a highly correlated item times the cell median ratio. The cell median ratio is calculated by finding the median of all ratios of the item to be imputed to the highly correlated item for all respondents in the cell.

METHOD 6: Direct substitution of prior year data.
METHOD 7: Cell Median. The imputed value is equal to the median of all respondents in the cell for that item.

## Group One:

A group of PLS variables was imputed using method 1 (prior year multiplied by mean growth rate); if prior year reported data were not available then method 2 (the adjusted cell mean) was used; if the adjusted cell mean could not be calculated then method 3 (the cell mean) was used. Variables in this first group include:

- Librarians with Master's degrees from programs accredited by the ALA (MASTER)
- Total Librarians (LIBRARIA)
- All Other Paid Staff (OTHPAID)
- Local Government Revenue (LOCGVT)
- Total Operating Revenue (TOTINCM)
- Salaries \& Wages Expenditures (SALARIES)
- Total Staff Expenditures (STAFFEXP)
- Other Materials Expenditures (OTHMATEX)
- Total Collection Expenditures (TOTEXPCO)
- Other Operating Expenditures (OTHOPEXP)
- Total Operating Expenditures (TOTOPEXP)
- Print Materials (BKVOL)
- Audio (AUDIO)
- Video (VIDEO)
- Library Visits (VISITS)
- Total Circulation (TOTCIR)
- Total Attendance at Library Programs (TOTATTEN)
- Number of Registered Borrowers (REGBOR)

## Group Two:

A second group of variables was imputed using method 2 (adjusted cell mean); if the adjusted cell mean could not be calculated, then method 3 (the cell mean) was used. These variables include:

- Total Capital Expenditures (CAPITAL)
- Databases (DATABASE)
- Current Print Serial Subscriptions (SUBSCRIP)
- Reference Transactions (REFERENC)

## Group Three:

A third group of variables was imputed using method 1 (prior year multiplied by mean growth rate); if prior year reported data was not available to calculate growth rates, then method 7 (cell median) was used. These variables include:

- State Government Revenue (STGVT)
- Other Operating Revenue (OTHINCM)
- Current Electronic Serial Subscriptions (ESUBSCRP)
- Local Government Capital Revenue (LCAP_REV)
- Total Capital Revenue (CAP_REV)
- Electronic Books (EBOOK)
- Other Databases (DB_OTH)

## Group Four:

A fourth group of variables was imputed using only method 7 (cell median); these variables were:

- Federal Government Revenue (FEDGVT)
- State Government Capital Revenue (SCAP_REV)
- Federal Government Capital Revenue (FCAP_REV)
- Other Capital Revenue (OCAP_REV)
- Local Databases (DB_LOC)

## Group Five:

A fifth group of variables was imputed using method 4 (prior year ratio to another item); if nonzero prior year reported unit data was not available, then method 2 (adjusted cell mean) was used; if the adjusted cell mean could not be calculated, then method 3 (cell mean) was used. The variables in the fifth group, along with the highly correlated variable(s) in the prior year ratio, include:

- Employee Benefits Expenditures (BENEFIT):
- Total Staff Expenditures (STAFFEXP)
- Public Service Hours Per Year (HRS_OPEN):
- Total number of outlets. The total number of outlets is equal to the sum of Number of Central Libraries (CENTLIB), Number of Branch Libraries (BRANLIB), and Number of Bookmobiles (BKMOB).
- Inter-Library Loans Provided To (LOANTO):
- Inter-Library Loans Received From (LOANFM)

The Electronic Materials Expenditures (ELMATEXP) and Number of Internet Computers Used by General Public (GPTERMS) variables were both considered part of both groups one and five. If missing values for ELMATEXP were imputed using method 4, then the Total Collection Expenditures (TOTEXPCO) variable was used as the other item in the prior year ratio. If missing values for GPTERMS were imputed using method 4, then the number of Library Visits (VISITS) was used as the other item in the prior year ratio.

## Group Six:

A sixth group of variables was imputed using method 5 (cell median ratio with another item); if current year reported unit data was not available for the other variable in the ratio, then method 2 (adjusted cell mean) was used ; if the adjusted cell mean could not be calculated, then method 3 (cell mean) was used. The variables in the sixth group, along with the highly correlated variable(s) used in the cell median ratio, include:

- Print Material Expenditures (PRMATEXP):
- Total Collection Expenditures (TOTEXPCO)
- State Databases (DB_ST):
- Total Licensed Databases (DATABASE)
- Circulation of Children's Materials (KIDCIRCL):
- Total Circulation (TOTCIR)
- Number of Users of Public Internet Computers Per Year (PITUSR):
- Number of Internet Computers Used by General Public (GPTERMS)

The Number of Children's Programs (KIDPRO) and the Interlibrary Loans Received From (LOANFM) variables can both be considered part of both Groups one and six. If missing values for KIDPRO are imputed using method 5, then the Total Number of Library Programs (TOTPRO) variable is used as the highly correlated value in the cell median calculations. If missing values for LOANFM are imputed using method 5, then the Interlibrary Loans Provided To (LOANTO) variable is used as the highly correlated value in the cell median calculations.

## Group Seven:

A seventh group of variables was imputed using method 5 (cell median ratio with another item), whether or not current year unit data was reported for the other variable in the ratio. The variables in this group, along with the highly correlated variable(s) used in the cell media ratio include:

- Interlibrary Loans Received From (LOANFM):
- Interlibrary Loans Provided To (LOANTO)
- Total Number of Library Programs (TOTPRO):
- Number of Children's Programs (KIDPRO)
- Children's Program Attendance (KIDATTEN):
- Total Attendance at Library Programs (TOTATTEN)

The Inter-Library Loans Provided To (LOANTO) can be considered part of both groups five and seven. If nonzero prior year reported unit data were available, then method 4 (prior year ratio to another item) was used; if not, then method 5 (cell median ratio with another item) was used as the backup method. For both methods, the Interlibrary Loans Received From (LOANFM) was used as the highly correlated variable when forming the ratios.

## Second Stage: Adjustments

The methods listed below adjust imputations for some of the missing values, based on the PLS variable. These adjustments verify that detail items sum to totals, making corrections as necessary.

METHOD 8: Obtained value by relationship of Total to Detail Items.
The imputed value of a total is adjusted using its relationship with reported detail items.
METHOD 9: Raking of detail items to match total.
The imputed value for a detail item is adjusted by raking methods so that it matches a reported total.
METHOD 10: Special impute for an Item.
The reported value of an item is adjusted using its relationship with another reported item.
METHOD 11: Changed by consistency check.
The imputed value is adjusted using customized consistency checks specific to that variable.

## Group One:

These variables were adjusted using methods 8 (Obtained value by relationship of total to detail items) or method 9 (Raking) after the initial stage of imputation:

- All Other Paid Staff (OTHPAID)
- Total Paid Employees (TOTSTAFF)
- Local Government Capital Revenue (LCAP_REV)
- State Government Capital Revenue (SCAP_REV)
- Federal Capital Revenue (FCAP_REV)
- Other Capital Revenue (OCAP_REV)

Group Two:
These variables were adjusted using method 8 (Obtained value by relationship of total to detail items) after the initial stage of imputation:

- Salaries \& Wages Expenditures (SALARIES)
- Employee Benefits Expenditures (BENEFIT)
- Total Staff Expenditures (STAFFEXP)
- Print Materials Expenditures (PRMATEXP)
- Total Collection Expenditures (TOTEXPCO)
- Other Operating Expenditures (OTHOPEXP)
- Total Operating Expenditures (TOTOPEXP)
- Total Capital Revenue (CAP_REV)
- Total Operating Income (TOTINCM)
- Total Licensed Databases (DATABASE)

Note that in certain sparse data conditions, Salaries \& Wages Expenditures (SALARIES),
Employee Benefits Expenditures (BENEFIT), Total Staff Expenditures (STAFFEXP), and Total Collection Expenditures (TOTEXPCO) can be adjusted using a prior year ratio to another item (method 4) after the initial stage of imputation.

## Group Three:

These variables were adjusted using method 9 (Raking) after the initial stage of imputation:

- Print Materials Expenditures (PRMATEXP)
- Electronic Materials Expenditures (ELMATEXP)
- Other Materials Expenditures (OTHMATEXP)
- Federal Government Revenue (FEDGVT)
- State Government Revenue (STGVT)
- Local Government Revenue (LOCGVT)
- Other Operating Revenue (OTHINCM)
- State Databases (DB_ST)
- Local Databases (DB_LOC)
- Other Databases (DB_OTH)

## Group Four:

These variables are adjusted using method 10 (Special Impute) after the initial stage of imputation:

- Total Capital Expenditures (CAPITAL)
- Public Service Hours Per Year (HRS_OPEN)

Group Five:
These variables are adjusted using method 11 (Consistency Check) after the initial stage of imputation:

- Total Circulation (TOTCIR)
- Interlibrary Loans Received From (LOANFM)
- Total Number of Library Programs (TOTPRO)
- Number of Children's Programs (KIDPRO)
- Total Attendance at Library Programs (TOTATTEN)
- Children's Program Attendance (KIDATTEN)
- Number of Internet Computers Used by General Public (GPTERMS)
- Number of Users of Public Internet Computers Per Year (PITUSR)

The variable Total Librarians (LIBRARIA) is adjusted using methods 8 (Obtained value by relationship of total to detail items), 9 (Raking) or 11 (Consistency Check) after the initial stage of imputation.

The variable Librarians with Master's degrees from programs accredited by the ALA (MASTER) is adjusted using methods 8 (Obtained value by relationship of total to detail items) or 11 (Consistency Check) after the initial stage of imputation.

Note that variables Total Number of Library Programs (TOTPRO) and Children's Program Attendance (KIDATTEN) are both adjusted using cell median ratio to another item (method 5) in some situations.

## Nonsampling Errors

Because all units in the universe are surveyed, the data are not subject to sampling error, but they are subject to nonsampling errors, such as errors in response, nonresponse errors, coverage errors arising from an incomplete listing of public libraries, coding errors, or processing errors.

Every effort is made to mitigate such errors. The editing efforts described above are designed to decrease the number of errors due to inaccurate response or due to processing problems. Imputation lessens the effect of nonresponse. Efforts are made to obtain complete listings of public libraries from the state library agencies. Although such efforts are made, some nonsampling error likely remains in the data.

## Appendix C - Survey Questionnaire

| State Characteristics |  |  |  |
| :--- | :--- | :--- | :--- |
| Item No. | Item | Current Year | Prior Year |
| 100 | Reporting Period Start Date (MM/YYYY) |  |  |
| 101 | Reporting Period End Date (MM/YYYY) |  |  |
|  |  |  |  |
| 102 | State Total Population Estimate |  |  |
| 103 | Total Unduplicated Population of Legal Service Areas |  |  |

## State Characteristics Data Element Definitions

Note: The items below are answered by the state library agency.

Official State Total Population Estimate

Total Unduplicated Population of Legal Service Areas

## Data Element Definition

This is the earliest date (month and year) for a 12-month period that applies to the state's data being submitted to IMLS.

Note: Reporting period means data for the fiscal year that ended in the previous calendar year. If data are collected for different local reporting periods, provide the earliest starting date.

Reporting Period Ending Date This is the latest date (month and year) for a 12-month period that applies to the state's data being submitted to IMLS.

Note: Reporting period means data for the fiscal year that ended in the previous calendar year. If data are collected for different local reporting periods, provide the latest ending date.

This is the most recent official total population figure for your state that matches the local population figures that you are submitting to IMLS. The State Data Coordinator should obtain this figure annually from the State Data Center or other official state sources.

This is the total unduplicated population of those areas in your state that receive library services. The population of unserved areas is not included in this figure.

Note: A state's actual total population of legal service areas may be different from the total population of legal service areas as calculated by WebPLUS. This happens in states where there are overlaps in population of legal service areas served by individual libraries, resulting in the same population being counted twice in the WebPLUS calculation. For states that have no overlapping jurisdictions, this number will be identical to your state's total population of legal service areas as calculated by WebPLUS. For states that do have overlaps in population of legal service areas served by individual libraries, this number must be calculated separately.

Use your state's most recent official state population figures for jurisdictions in your state as the basis for calculating the total unduplicated population of legal service areas.

## Administrative Entity Data Element Definitions

Administrative Entity. (This is not a WebPLUS Data Element.) This is the agency that is legally established under local or state law to provide public library service to the population of a local jurisdiction. The administrative entity may have a single outlet, or it may have more than one outlet.

## Data Element Definition

This is the identification code assigned by WebPLUS to the administrative entity.

This is the state-assigned identification code for the administrative entity.

This is the legal name of the administrative entity.
Note: Provide the name of the public library. Do not use acronyms. Do not abbreviate the name unless it exceeds the WebPLUS field length of 60 characters. Avoid abbreviations at the beginning of the name and do not punctuate abbreviations. (See Standard Abbreviations for WebPLUS in Appendix I.)

This is the complete street address of the administrative entity.
Note: Do not report a post office box or general delivery.
This is the city or town in which the administrative entity is located.

ZIP Code (of street address) This is the standard five-digit postal zip code for the street address of the administrative entity.

ZIP +4 (of street address) This is the four-digit postal ZIP code extension for the street address of the administrative entity.

This is the mailing address of the administrative entity.
This is the city or town of the mailing address for the administrative entity.

This is the standard five-digit postal ZIP code for the mailing address of the administrative entity.

This is the four-digit postal ZIP code extension for the mailing address of the administrative entity.

This is the county in which the headquarters of the administrative entity is located.

This is the telephone number of the administrative entity, including area code.

Web Address

Interlibrary Relationship Code

Note: Report telephone number without spacing or punctuation. If the Administrative Entity has no phone, enter " -3 " (for Not Applicable).

This is the Web address of the administrative entity. http:/

Note: If the Administrative Entity has no web address, enter "3" (for Not Applicable).

Select one of the following:

HQ-Headquarters of a Federation or Cooperative. The library or entity that provides the physical space and staff who manage, coordinate, or administer the programs of the federation or cooperative.

Note: Agencies that serve other libraries rather than the public should not be reported to FSCS.

ME-Member of a Federation or Cooperative. An autonomous library joined by formal or informal agreement(s) with (a) other autonomous libraries in the same state to perform various services cooperatively, such as resource sharing, communications, etc., and (b) libraries that are part of national, multi-state or statewide library federations or cooperatives. (Do not include OCLC.) Do not include multiple-outlet administrative entities (e.g., libraries with branches and that have the word "system" in their legal name) if the entity does not have an agreement with another autonomous library.

NO-Not a Member of a Federation or Cooperative.
The legal basis is the type of local government structure within which the entity functions. It reflects the state or local law, which authorizes the library.

Select one of the following:
CC-City/County. A multi-jurisdictional entity that is operated jointly by a county and a city.

CI-Municipal Government (city, town or village). A municipal government is an organized local government authorized in a state's constitution and statutes and established to provide general government for a specific concentration of population in a defined area.

CO—County/Parish. An organized local government authorized in a state's constitution and statutes and established to provide general government.

Administrative Structure Code

LD-Library District. A library district is a local entity other than a county, municipality, township, or school district that is authorized by state law to establish and operate a public library as defined by FSCS. It has sufficient administrative and fiscal autonomy to qualify as a separate government. Fiscal autonomy requires support from local taxation dedicated to library purposes (e.g., a library tax).

MJ-Multi-jurisdictional. An entity operated jointly by two or more units of local government under an intergovernmental agreement which creates a jointly appointed board or similar means of joint governance; to be distinguished from a library which contracts to serve other jurisdictions and from special library districts.

Note: Please put city/county combinations under 'CC', rather than under Multi-jurisdictional.

NL—Native American Tribal Government. An organized local government authorized and established to provide general government to residents of a Native American reservation.

Note: Include native Alaskan villages in this category.
NP—Non-profit Association or Agency. An entity privately controlled but meeting the statutory definition of a public library in a given state; includes association libraries.

SD-School District. An organized local entity providing public elementary, secondary, and/or higher education which, under state law, has sufficient administrative and fiscal autonomy to qualify as a separate government. Excludes "dependent public school systems" of county, municipal, township, or state governments.

OT-Other.
This code identifies an autonomous library entity (administrative entity) that has its own governance and funding.

An administrative entity is the agency that is legally established under local or state law to provide public library service to the population of a local jurisdiction. The administrative entity may have a single outlet, or it may have more than one outlet.

Select one of the following:
MA—Administrative Entity with Multiple Direct Service Outlets where Administrative Offices are separate. An administrative entity that serves the public directly with two or more service outlets, including some combination of one central library, branch(es), bookmobile(s), and/or books-by-mail only. The administrative offices are separate from the direct service outlets and do not provide direct library services.

203 FSCS Public Library Definition

MO—Administrative Entity with Multiple Direct Service Outlets where Administrative Offices are Not Separate. An administrative entity that serves the public directly with two or more service outlets, including some combination of one central library, branch(es), bookmobile(s), and/or books-by-mail only.

SO—Administrative Entity with a Single Direct Service Outlet. An administrative entity that serves the public directly with one central library, books-by-mail only, or one bookmobile.

Answer $<\mathrm{Y}>$ es or $<\mathrm{N}>0$ to the following question: "Does this public library meet all the criteria of the FSCS public library definition?'

A public library is an entity that is established under state enabling laws or regulations to serve a community, district, or region, and that provides at least the following:

1. An organized collection of printed or other library materials, or a combination thereof;
2. Paid staff;
3. An established schedule in which services of the staff are available to the public;
4. The facilities necessary to support such a collection, staff, and schedule; and
5. Is supported in whole or in part with public funds.

Note: If the library meets all of the requirements of this definition, respond with $a<Y>e s$. If the library does not meet one or more of the requirements, respond with a $<\mathrm{N}>0$.

Choose from among the following types of readily available Census geography, one code that either exactly or most nearly describes the geographic area for which the public library has been established to offer services and from which (or on behalf of which) the library derives revenue, plus any areas served under contract for which the library is the primary service provider.

Note: The Population of Legal Service Area (data element \#208) should be reflected in the geographic code selected. For further clarification of municipal government, county/parish, and school district, refer to definitions under Legal Basis Code (data element \#201). For further clarification of metropolitan area, see Metropolitan Status Code "NC—Metropolitan Area, but Not Within Central City Limits" (data element \#710—Outlet Data Element Definitions).

CI1—Municipal Government (city, town or village) (exactly)

CO1-County/Parish (exactly)
CO2-County/Parish (most nearly)
MA1-Metropolitan Area (exactly)
MA2-Metropolitan Area (most nearly)
MC1—Multi-County (exactly)
MC2-Multi-County (most nearly)
SD1-School District (exactly)
SD2—School District (most nearly)
OTH-Other
Answer $<\mathrm{Y}>\mathrm{es}$ or $<\mathrm{N}>0$ to the following question: "Did the administrative entity's legal service area boundaries change since last year?'

Note: Changes are likely to result, for example, when a municipality annexes land, when one municipality in a county becomes either an independent city or its own county necessitating its exclusion from the first county's geography, or when an administrative entity contracts to provide public library service for some additional geographic area other than the geographic area for which it was established (e.g., a municipal library contracts to serve county residents).

This is the starting date (month, day, and year) for a 12-month period that applies to the administrative entity's data being submitted to IMLS.

Note: Reporting period means data for the fiscal year that ended in the previous calendar year.

This is the ending date (month, day, and year) for a 12 -month period that applies to the administrative entity's data being submitted to IMLS.

Note: Reporting period means data for the fiscal year that ended in the previous calendar year.

The number of people in the geographic area for which a public library has been established to offer services and from which (or on behalf of which) the library derives revenue, plus any areas served under contract for which the library is the primary service provider.

Note: The determination of this population figure shall be the responsibility of the state library agency. This population figure should be based on the most recent official state population figures for jurisdictions in your state available from the State Data Center. The State Data Coordinator should obtain these figures annually from the State Data Center or other official state sources.

This is one type of single outlet library (SO) or the library, which is the operational center of a multiple-outlet library (MO or MA). Usually all processing is centralized here and the principal collections are housed here. Synonymous with main library.

Note: Each administrative entity may report either no central library or one central library. No administrative entity may report more than one central library. In the administrative entity file, this simply means reporting "0" or "1" for central library. Where two or more libraries are considered "centrals" for state or local purposes, one central library and one or more branch libraries should be reported to FSCS. If you wish to identify a central library in the outlet file, identify the library with the largest collection as the central library for FSCS purposes, and report all others as branches. Where there are several co-equal outlets and no principal collection, report all such outlets as branches, not central libraries.

A branch library is an auxiliary unit of an administrative entity which has at least all of the following:

1. Separate quarters;
2. An organized collection of library materials;
3. Paid staff; and
4. Regularly scheduled hours for being open to the public.

A bookmobile is a traveling branch library. It consists of at least all of the following:

1. A truck or van that carries an organized collection of library materials;
2. Paid staff; and
3. Regularly scheduled hours (bookmobile stops) for being open to the public.

Note: Count the number of vehicles in use, not the number of stops the vehicle makes.

## PAID STAFF (FULL-TIME EQUIVALENT)

Report figures as of the last day of the fiscal year. Include all positions funded in the library's budget whether those positions are filled or not. To ensure comparable data, 40 hours per week has been set as the measure of full-time employment (FTE). For example, 60 hours per week of part-time work by employees in a staff category divided by the 40 -hour measure equals 1.50 FTEs.

ALA-MLS

Total Librarians

All Other Paid Staff

Total Paid Employees

Librarians with master's degrees from programs of library and information studies accredited by the American Library Association.

Persons with the title of librarian who do paid work that usually requires professional training and skill in the theoretical or scientific aspects of library work, or both, as distinct from its mechanical or clerical aspect. This data element also includes ALA-MLS (data element \#250).

This includes all other FTE employees paid from the reporting unit budget, including plant operations, security, and maintenance staff.

This is the sum of Total Librarians and All Other Paid Staff (data elements \#251 and \#252).

## OPERATING REVENUE

Report revenue used for operating expenditures as defined below. Include federal, state, local, or other grants. DO NOT include revenue for major capital expenditures, contributions to endowments, revenue passed through to another agency (e.g., fines), or funds unspent in the previous fiscal year (e.g., carryover). (Funds transferred from one public library to another public library should be reported by only one of the public libraries. The State Data Coordinator shall determine which library will report these funds.)

300 Local Government Revenue This includes all local government funds designated by the community, district, or region and available for expenditure by the public library. Do not include the value of any contributed or in-kind services or the value of any gifts and donations, library fines, fees, or grants.

Do not include state, federal, and other funds passed through local government for library use. Report these funds with state government revenue or federal government revenue, as appropriate.

State Government Revenue These are all funds distributed to public libraries by state government for expenditure by the public libraries, except for federal money distributed by the state. This includes funds from such sources as penal fines, license fees, and mineral rights.

Note: If operating revenue from consolidated taxes is the result of state legislation, the revenue should be reported under state revenue (even though the revenue may be from multiple sources).

This includes all federal government funds distributed to public libraries for expenditure by the public libraries, including federal money distributed by the state.

This is all operating revenue other than that reported under local, state, and federal (data elements \#300, \#301, and \#302). Include, for example, monetary gifts and donations received in the current year, interest, library fines, fees for library services, or grants. Do not include the value of any contributed or in-kind services or the value of any non-monetary gifts and donations.

This is the sum of Local Government Revenue, State Government Revenue, Federal Government Revenue, and Other Operating Revenue (data elements \#300 through \#303).

## OPERATING EXPENDITURES

Operating expenditures are the current and recurrent costs necessary to support the provision of library services. Significant costs, especially benefits and salaries, that are paid by other taxing agencies (government agencies with the authority to levy taxes) "on behalf of" the library may be included if the information is available to the reporting agency. Only such funds that are supported by expenditure documents (such as invoices, contracts, payroll records, etc.) at the point of disbursement should be included. Do not report the value of free items as expenditures. Do not report estimated costs as expenditures. Do not report capital expenditures under this category.

## Staff Expenditures

350 Salaries \& Wages Expenditures

351 Employee Benefits Expenditures

352 Total Staff Expenditures
This includes salaries and wages for all library staff (including plant operations, security, and maintenance staff) for the fiscal year. Include salaries and wages before deductions but exclude employee benefits.

These are the benefits outside of salaries and wages paid and accruing to employees (including plant operations, security, and maintenance staff), regardless of whether the benefits or equivalent cash options are available to all employees. Include amounts for direct paid employee benefits including Social Security, retirement, medical insurance, life insurance, guaranteed disability income protection, unemployment compensation, workmen's compensation, tuition, and housing benefits.

This is the sum of Salaries \& Wages Expenditures and Employee Benefits Expenditures (data elements \#350 and \#351).

## Collection Expenditures

This includes all operating expenditures from the library budget for all materials in print, microform, electronic, and other formats considered part of the collection, whether purchased, leased, or licensed. Exclude charges or fees for interlibrary loans and expenditures for document delivery.

353 Print Materials Expenditures

354 Electronic Materials Expenditures

Report all operating expenditures for the following print materials: books, serial back files, current serial subscriptions, government documents, and any other print acquisitions.

Report all operating expenditures for electronic (digital) materials. Types of electronic materials include e-books, eserials (including journals), government documents, databases (including locally mounted, full text or not), electronic files, reference tools, scores, maps, or pictures in electronic or digital format, including materials digitized by the library. Electronic materials can be distributed on magnetic tape, diskettes, computer software, CD-ROM, or other portable digital carrier, and can be accessed via a computer, via access to the Internet, or by using an e-book reader. Include expenditures for materials held locally and for remote materials for which permanent or temporary access rights have been acquired. Include expenditures for database licenses. [Note: Based on ISO 2789 definition.]

Note: Expenditures for computer software used to support library operations or to link to external networks, including the Internet, are reported under Other Operating Expenditures (data element \#357).

| 355 | Other Materials Expenditures | Report all operating expenditures for other materials, such as microform, audio, video, DVD, and materials in new formats. |
| :---: | :---: | :---: |
| 356 | Total Collection Expenditures | This is the sum of Print Materials Expenditures, Electronic Materials Expenditures, and Other Materials Expenditures (data elements \#353, \#354, and \#355). |
| 357 | Other Operating Expenditures | This includes all expenditures other than those reported for Total Staff Expenditures (data element \#352) and Total Collection Expenditures (data element \#356). <br> Note: Include expenses such as binding, supplies, repair or replacement of existing furnishings and equipment; and costs of computer hardware and software used to support library operations or to link to external networks, including the Internet. Report contracts for services, such as costs of operating and maintaining physical facilities, and fees paid to a consultant, auditor, architect, attorney, etc. |
| 358 | Total Operating Expenditures | This is the sum of Total Staff Expenditures, Total Collection Expenditures, and Other Operating Expenditures (data elements \#352, \#356, and \#357). |

## CAPITAL REVENUE

Report all revenue to be used for major capital expenditures, by source of revenue. Include funds received for (a) site acquisition; (b) new buildings; (c) additions to or renovation of library buildings; (d) furnishings, equipment, and initial collections (print, non-print, and electronic) for new buildings, building additions, or building renovations; (e) computer hardware and software used to support library operations, to link to networks, or to run information products; (f) new vehicles; and (g) other one-time major projects. Exclude revenue to be used for replacement and repair of existing furnishings and equipment, regular purchase of library materials, and investments for capital appreciation. Exclude income passed through to another agency (e.g., fines), or funds unspent in the previous fiscal year (e.g., carryover). Funds transferred from one public library to another public library should be reported by only one of the public libraries. Report federal, state, local, and other revenue to be used for major capital expenditures in the following categories:

400 Local Government Capital Revenue

401 State Government Capital Revenue

402 Federal Government Capital Revenue

403

Report all governmental funds designated by the community, district, or region and available to the public library for the purpose of major capital expenditures, except for state and/or federal money distributed by the local government.

Report all funds distributed to public libraries by state government for expenditure by the public libraries for the purpose of major capital expenditures, except for federal money distributed by the state.

Report federal governmental funds, including federal funds distributed by the state or locality, and grants and aid received by the library for the purpose of major capital expenditures.

Report private (non-governmental funds), including grants received by the library for the purpose of major capital expenditures.

Total Capital Revenue This is the sum of Local Government Capital Revenue, State Government Capital Revenue, Federal Government Capital Revenue, and Other Capital Revenue (data elements \#400 through \#403).

Note: The amounts reported for Total Capital Revenue and Total Capital Expenditures are not expected to be equal.

## CAPITAL EXPENDITURES

405 Total Capital Expenditures
Report major capital expenditures (the acquisition of or additions to fixed assets). Examples include expenditures for (a) site acquisitions; (b) new buildings; (c) additions to or renovation of library buildings; (d) furnishings, equipment, and initial book stock for new buildings, building additions, or building renovations; (e) library automation systems; (f) new vehicles; and (g) other one-time major projects. Include federal, state, local, or other revenue used for major capital expenditures. Only funds that are supported by expenditure documents (e.g., invoices, contracts, payroll records, etc.) at the point of disbursement should be included. Estimated costs are not included. Exclude expenditures for replacement and repair of existing furnishings and equipment, regular purchase of library materials, and investments for capital appreciation. Exclude contributions to endowments, or revenue passed through to another agency (e.g., fines). Funds transferred from one public library to another public library should be reported by only one of the public libraries.

## LIBRARY COLLECTION

This section of the survey collects data on selected types of materials. It does not cover all materials (i.e., microform, scores, maps, and pictures) for which expenditures are reported under Print Materials Expenditures, Electronic Materials Expenditures, and Other Materials Expenditures (data elements \#353, \#354, and \#355). Under this category report only items the library has acquired as part of the collection and catalogued, whether purchased, leased, licensed, or donated as gifts.

1. Books in print. Books are non-serial printed publications (including music and maps) that are bound in hard or soft covers, or in loose-leaf format. Include non-serial government documents. Report the number of physical units, including duplicates. For smaller libraries, if volume data are not available, count the number of titles. Books packaged together as a unit (e.g., a 2 -volume set) and checked out as a unit are counted as one physical unit.

451 Electronic Books (EBooks)

Report the number of units, both physical and electronic, including duplicates. Items packaged together as a unit (e.g., two video cassettes for one movie) and checked out as a unit are counted as one physical unit. For electronic units, report only items the library has selected as part of the collection and made accessible through the library's Online Public Access Catalog (OPAC).

## Licensed Databases

Report the number of licensed databases (including locally mounted or remote, full-text or not) for which temporary or permanent access rights have been acquired through payment by the library, or by formal agreement with the State Library or a cooperative agreement within the state or region. A database is a collection of electronically stored data or unit records (facts, bibliographic data, abstracts, texts) with a common user interface and software for the retrieval and manipulation of the data.

Note: The data or records are usually collected with a particular intent and relate to a defined topic. A database may be issued on CD-ROM, diskette, or other direct access method, or as a computer file accessed via dial-up methods or via the Internet. Subscriptions to individual electronic serial titles are reported under Current Electronic Serial Subscriptions (data element \#459). Each database is counted individually even if access to several databases is supported through the same vendor interface

Report the number of licensed databases acquired through payment or formal agreement, by source of access:

454 Local
455 State (state government or state library)

456 Other cooperative agreements (or consortia) within state or region

457 Total Licensed Databases
This is the sum of Local, State, and Other licensed databases (data elements \#454 through \#456).

## Current Serial Subscriptions

Current serial subscriptions are arrangements by which, in return for a sum paid in advance, serials are provided for a specified number of issues. Include current serial subscriptions in print, electronic, and digital formats.

## 458 Current Print Serial <br> Subscriptions

Report the number of current print serial subscriptions, including duplicates, for all outlets. Examples of serials are periodicals (magazines), newspapers, annuals, some government documents, some reference tools, and numbered monographic series.

Report the number of current electronic, electronic and other format, and digital serial subscriptions (e-serials, ejournals), including duplicates, for all outlets. Examples include periodicals (magazines), news-papers, annuals, some government documents, some reference tools, and numbered monographic series distributed in the following ways: (a) via the Internet (e.g., HTML, PDF, JPEG, or compressed file formats such as zipped files), (b) on CDROM or other portable digital carrier, (c) on databases (including locally mounted databases), and (d) on diskettes or magnetic tapes. Electronic serial subscriptions include serials held locally or remote resources that the library has authorization to access, including those available through statewide or consortia agreements. Do not include subscriptions to indexing and abstracting databases that include full-text serial content (e.g., EBSCO Host, ProQuest, OCLC FirstSearch).

## SERVICES

This is the sum of annual public service hours for outlets.

Note: Include the hours open for public service for Centrals (data element \#209), Branches (data element \#210), Bookmobiles (data element \#211), and Books-by-Mail Only. For each bookmobile, count only the hours during which the bookmobile is open to the public. For administrative entities that offer ONLY books-by-mail service, count the hours that the outlet is staffed for service. Minor variations in scheduled public service hours need not be included, however, extensive hours closed to the public due to natural disasters or other events should be excluded even if the staff is scheduled to work.

This is the total number of persons entering the library for whatever purpose during the year.

Note: If an actual count of visits is unavailable, determine an annual estimate by counting visits during a typical week in October and multiplying the count by 52. A "typical week" is a time that is neither unusually busy nor unusually slow. Avoid holiday times, vacation periods for key staff, or days when unusual events are taking place in the community or the library. Choose a week in which the library is open its regular hours. Include seven consecutive calendar days, from Sunday through Saturday (or whenever the library is usually open).

Number of Registered Borrowers

Total Circulation

Circulation of Children's Materials

A reference transaction is an information contact which involves the knowledge, use, recommendations, interpretation, or instruction in the use of one or more information sources by a member of the library staff. It includes information and referral services. Information sources include printed and non-printed materials, machine-readable databases, catalogs and other holdings records, and, through communication or referral, other libraries and institutions and people inside and outside the library. The request may come in person, by phone, by fax, or by mail, electronic mail, or through live or networked electronic reference service from an adult, a young adult, or a child.

Do not count directional transactions or questions of rules or policies. Examples of directional transactions are "Where are the children's books?" and "I'm looking for a book with the call number 811.2G." An example of a question of rules or policies is "Are you open until 9:00 tonight?"

Note: If an annual count of reference transactions is unavailable, determine an annual estimate by counting reference transactions during a typical week in October and multiply the count by 52. A "typical week" is a time that is neither unusually busy nor unusually slow. Avoid holiday times, vacation periods for key staff, or days when unusual events are taking place in the community or in the library. Choose a week in which the library is open its regular hours. Include seven consecutive calendar days, from Sunday through Saturday (or whenever the library is usually open).

A registered borrower is a library user who has applied for and received an identification number or card from the public library that has established conditions under which the user may borrow library materials and gain access to other library resources. (Output Measures for Public Libraries, $2^{\text {nd }}$ edition).

Note: Files should have been purged within the past three (3) years.

The total annual circulation of all library materials of all types, including renewals.

Note: Count all materials in all formats that are charged out for use outside the library. Interlibrary loan transactions included are only items borrowed for users. Do not include items checked out to another library.

The total annual circulation of all children's materials in all formats to all users, including renewals.

## INTER-LIBRARY LOANS

Received From

LIBRARY PROGRAMS
600 Total Number of Library Programs

601 Number of Children's Programs*

These are library materials, or copies of the materials, provided by one autonomous library to another upon request. The libraries involved in interlibrary loans are not under the same library administration. These data are reported as annual figures.

These are library materials, or copies of the materials, received by one autonomous library from another upon request. The libraries involved in interlibrary loans are not under the same library administration. These data are reported as annual figures.

A program is any planned event which introduces the group attending to any of the broad range of library services or activities or which directly provides information to participants. Programs may cover use of the library, library services, or library tours. Programs may also provide cultural, recreational, or educational information, often designed to meet a specific social need. Examples of these types of programs include film showings, lectures, story hours, literacy, English as a second language, citizenship classes, and book discussions.

Count all programs, whether held on- or off-site, that are sponsored or co-sponsored by the library. Exclude programs sponsored by other groups that use library facilities.

If programs are offered as a series, count each program in the series. For example, a film series offered once a week for eight weeks should be counted as eight programs.

Note: Exclude library activities delivered on a one-to-one basis, rather than to a group, such as one-to-one literacy tutoring, services to homebound, resume writing assistance, homework assistance, and mentoring activities.

A children's program is any planned event for which the primary audience is children and which introduces the group of children attending to any of the broad range of library services or activities for children or which directly provides information to participants. Children's programs may cover use of the library, library services, or library tours. Children's programs may also provide cultural, recreational, or educational information, often designed to meet a specific social need. Examples of these types of programs include story hours and summer reading events.

Number of Young Adult Programs*

603 Total Attendance at Library Programs*

604 Children's Program Attendance*

Count all children's programs, whether held on- or off-site, that are sponsored or co-sponsored by the library. Do not include children's programs sponsored by other groups that use library facilities. If children's programs are offered as a series, count each program in the series. For example, a story hour offered once a week, 48 weeks a year, should be counted as 48 programs. Exclude library activities for children delivered on a one-to-one basis, rather than to a group, such as one-to-one literacy tutoring, services to homebound, homework assistance, and mentoring activities. This figure is a subset of the Total Number of Library Programs (data element \#600).

Note: The National Center for Education Statistics (NCES): Children and Young Adults Defined (Services and Resources for Children and Young Adults in Public Libraries [August 1995, NCES 95357]) defines children as persons age 11 years and under.

A young adult program is any planned event for which the primary audience is young adult and which introduces the group of young adults attending to any of the broad range of library services or activities for young adults or which directly provides information to participants. Young adult programs may cover use of the library, library services, or library tours. Young adult programs may also provide cultural, recreational, or educational information, often designed to meet a specific social need. Examples of these types of programs include book clubs and summer reading events.

Count all young adult programs, whether held on- or off-site, that are sponsored or co-sponsored by the library. Do not include young adult programs sponsored by other groups that use library facilities. If young adult programs are offered as a series, count each program in the series. For example, a book club offered every two weeks, 24 weeks a year, should be counted as 24 programs. Exclude library activities for young adults delivered on a one-to-one basis, rather than to a group, such as one-to-one literacy tutoring, services to homebound, homework assistance, and mentoring activities. This figure is a subset of the Total Number of Library Programs (data element \#600).

The National Center for Education Statistics (NCES): Children and Young Adults Defined (Services and Resources for Children and Young Adults in Public Libraries, August 1995, NCES 95357) and The Young Adult Library Services Association (YALSA) defines young adults as age 12-18.

This is a total count of the audience at all library programs during the reporting period. (See Total Number of Library Programs, data element \#600, for the definition of a library program.)

The count of the audience at all programs for which the primary audience is children 11 years and under. Include adults who attend programs intended primarily for children.

Young Adult Program
Attendance*
Note: Do not count attendance at library activities for children that are delivered on a one-to-one basis, rather than to a group, such as one-to-one literacy tutoring, services to homebound, homework assistance, and mentoring activities. (See Number of Children's Programs, data element \#601, for the definition of a children's library program.)

The count of the audience at all programs for which the primary audience is young adults 12 to 18 years. Include adults who attend programs intended primarily for young adults.

Note: Do not count attendance at library activities for young adults that are delivered on a one-to-one basis, rather than to a group, such as one-to-one literacy tutoring, services to homebound, homework assistance, and mentoring activities. (See Number of Young Adult Programs, data element \#602, for the definition of a young adult library program.)

## OTHER ELECTRONIC INFORMATION

650 Number of Interne Computers Used by General Public

Number of Users of Public Internet Computers Per Year

Report the number of the library's Internet computers [personal computers (PCs) and laptops], whether purchased, leased, or donated, used by the general public in the library.

Report the total number of individuals that have used Internet computers in the library during the last year. If the computer is used for multiple purposes (Internet access, word-processing, OPAC, etc.) and Internet users cannot be isolated, report all usage. A typical week or other reliable estimate may be used to determine the annual number. Sign-up forms or Web-log tracking software also may provide a reliable count of users.

Note: The number of users may be counted manually, using registration logs. Count each user that uses public internet computers, regardless of the amount of time spent on the computer. A user who uses the library's public internet computer(s) three times a year would count as three customers. Software such as "Historian" can also be used to track the number of users at each public internet computer. If the data element is collected as a weekly figure, multiply that figure by 52 to annualize it.

[^14]
## Outlet Data Element Definitions

| \# | Data Element Name | Data Element Definition |
| :---: | :---: | :---: |
| 700 | FSCS ID and SEQ (Automatic Display) | This is the identification code assigned by WebPLUS. Outlets are assigned the same FSCS ID as the administrative entity to which they belong, with a unique threedigit suffix added to distinguish each outlet. |
| 701 | LIB ID (Optional) | This is the state-assigned identification code for the outlet. |
| 702 | Name | This is the legal name of the outlet. |
|  |  | Note: Provide the legal name of the outlet. Do not use acronyms. Do not abbreviate the name unless it exceeds the WebPLUS field length of 60 characters. Avoid abbreviations at the beginning of the name and do not punctuate abbreviations. (See Standard Abbreviations for WebPLUS in Appendix I.) |
| 703 | Street Address | This is the complete street address of the outlet. |
|  |  | Note: Do not report a post office box or general delivery. For a bookmobile that operates from an administrative entity, branch, or central library, report the address of the administrative entity, branch or central library from which it operates. For a bookmobile that is itself the administrative entity, report the address where the bookmobile is parked at night. |
| 704 | City | This is the city or town in which the outlet is located. |
| 705 | ZIP Code | This is the standard five-digit postal ZIP code for the street address of the outlet. |
| 706 | ZIP+4 | This is the four-digit postal ZIP code extension for the street address of the outlet. |
| 707 | County of the Outlet | This is the county in which the outlet is located. |
| 708 | Phone | This is the telephone number of the outlet, including area code. |
|  |  | Note: Report telephone number without spacing or punctuation. If the outlet has no phone, enter " -3 " (for Not Applicable). |

An outlet is a unit of an administrative entity that provides direct public library service.

Select one of the following:
BM—Books-by-Mail Only. A direct mail order service which provides books and other library materials. Books-by-mail typically serves rural residents, the disabled, the homebound, and others without access to another type of public library outlet. Requests for materials are usually received by mail and by telephone only. Only books-bymail services that are housed separately from any other type of direct public service outlet (that is, central library, branches, or bookmobiles) should be coded here.

BR—Branch Library. A branch library is an auxiliary unit of an administrative entity which has at least all of the following:

1. Separate quarters;
2. An organized collection of library materials;
3. Paid staff; and
4. Regularly scheduled hours for being open to the public.

BS—Bookmobile(s). A bookmobile is a traveling branch library. It consists of at least all of the following:

1. A truck or van that carries an organized collection of library materials;
2. A paid staff; and
3. Regularly scheduled hours (bookmobile stops) for being open to the public.

Note: A separate outlet record may be created for each bookmobile. You may wish to create separate outlet records for individual bookmobiles if (1) they have different addresses and/or (2) they have different Metropolitan Status Codes (see outlet data element \#710). Alternatively, a bookmobile outlet record may include more than one bookmobile.

CE-Central Library. This is one type of single outlet library (SO) or the library which is the operational center of a multiple-outlet library (MO or MA). Usually all processing is centralized here and the principal collections are housed here. Synonymous with main library.

711 Square Footage of Outlet

Note: Each administrative entity may report either no central library or one central library. No administrative entity may report more than one central library. If you wish to identify a central library in the outlet file, identify the library with the largest collection as the central library for FSCS purposes, and report all others as branches. Where there are several co-equal outlets and no principal collection, report all such outlets as branches, not central libraries.

Select one of the following. Bookmobiles should report the code which best describes their primary service area.

Note: Contact the State Data Center for specific information about Metropolitan Areas in your state.

CC-Central City. The largest central city and, in some cases, up to two additional central cities are included in the title of the Metropolitan Area; there also are central cities that are not included in a Metropolitan Area title. A Metropolitan Area central city does not include any part of that city that extends outside the Metropolitan Area boundary.

NC—Metropolitan Area, but Not Within Central City Limits. A large population nucleus, together with adjacent communities that have a high degree of economic and social integration with that nucleus. Some Metropolitan Areas are defined around two or more nuclei. Each Metropolitan Area must contain a place with a minimum population of 50,000 or a Census Bureau-defined urbanized area and a total Metropolitan Area population of at least 100,000 (75,000 in New England). A Metropolitan Area comprises one or more central counties. (Independent cities are considered county equivalents.) A Metropolitan Area may also include one or more outlying counties that have close economic and social relationships with the central county. An outlying county must have a specified level of commuting to the central counties and also must meet certain standards regarding metropolitan character, such as population density, urban population, and population growth. In New England, Metropolitan Areas are composed of cities and towns rather than whole counties.

NO—Not in a Metropolitan Area.
Provide the area, in square feet, of the public library outlet (central library or branch). Report the total area in square feet for each library outlet (central library or branch) separately. This is the area on all floors enclosed by the outer walls of the library outlet. Include all areas occupied by the library outlet, including those areas off-limits to the public. Include any areas shared with another agency or agencies if the outlet has use of that area.

712 Number of Bookmobiles in the Bookmobile Outlet Record

The number of bookmobiles in the bookmobile outlet record.

Note: A bookmobile outlet record may include one or more bookmobiles. Complete this data element only if the outlet record is of the type BS—Bookmobile(s) (see outlet data element \#709). A bookmobile is a traveling branch library. It consists of at least all of the following:

1. A truck or van that carries an organized collection of library materials;
2. A paid staff; and
3. Regularly scheduled hours (bookmobile stops) for being open to the public. Count vehicles in use, not the number of stops the vehicle makes.
