In the paper “Pups Call, Mothers Rush: Does Maternal Responsiveness affect the Amount of Ultrasonic Vocalizations in Mouse Pups?” Figure 1 was incorrect. The black bars referred to BALB/C while the white bars to C57BL/6 mice. The correct figure is published below. The authors apologize for any confusion caused.

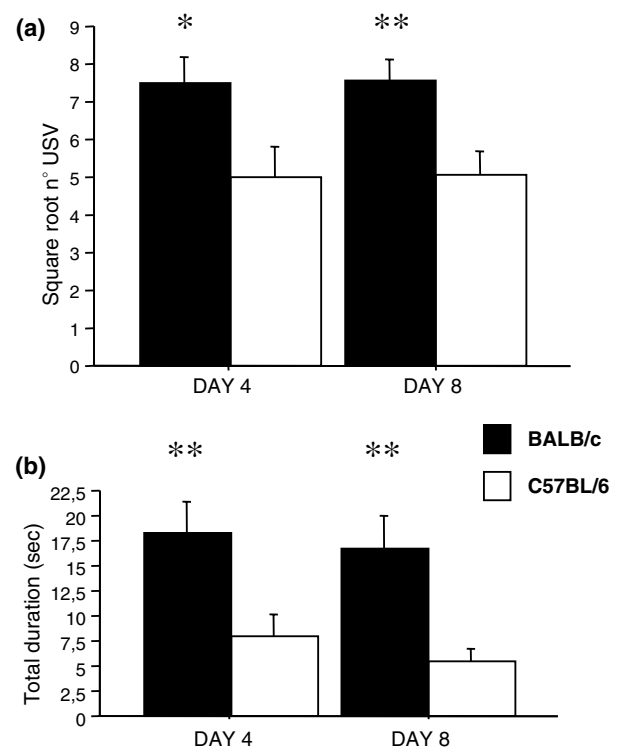

Fig. 1 Square root transformed number (a) and total duration (b) of ultrasonic calls emitted by 4- and 8-day-old C57BL/6 (white bars) BALB/C (black bars) pups during 5 min of isolation at room temperature. Data are mean + SE. * $p < 0.05$; ** $p < 0.01$ Tukey HSD versus BALB/c
