CONTENTS

1	Introduction	1
2	Basic tools for quantum mechanics	4
2.1	Hilbert spaces and operators	5
2.1.1	Vector spaces	5
2.1.2	Banach and Hilbert spaces	7
2.1.3	Geometrical properties of Hilbert spaces	9
2.1.4	Orthonormal bases	10
2.1.5	Subspaces and projectors	11
2.1.6	Linear maps between Banach spaces	13
2.1.7	Linear functionals and Dirac notation	14
2.1.8	Adjoins of bounded operators	18
2.1.9	Hermitian, unitary and normal operators	19
2.1.10	Partial isometries and polar decomposition	21
2.1.11	Spectra of operators	22
2.1.12	Unbounded operators	24
2.2	Measures	25
2.2.1	Measures and integration	25
2.2.2	Distributions	29
2.2.3	Hilbert spaces of functions	30
2.2.4	Spectral measures	31
2.3	Probability in quantum mechanics	34
2.3.1	Pure states	35
2.3.2	Mixed states, density matrices	37
2.4	Observables in quantum mechanics	38
2.4.1	Compact operators	38
2.4.2	Weyl quantization	40
2.5	Composed systems	44
2.5.1	Direct sums	45
2.5.2	Tensor products	46
2.5.3	Observables and states of composite systems	48
2.6	Notes	53
3	Deterministic dynamics	54
3.1	Deterministic quantum dynamics	55
3.1.1	Time-independent Hamiltonians	55
3.1.2	Perturbations of Hamiltonians	57
3.1.3	Time-dependent Hamiltonians	58
3.1.4	Periodic perturbations and Floquet operators	59

3.1.5	Kicked dynamics	61
3.2	Classical limits	62
3.3	Classical differentiable dynamics	66
3.4	Self-adjoint Laplacians on compact manifolds	70
3.5	Notes	72
4	Spin chains	73
4.1	Local observables	73
4.2	States of a spin system	75
4.3	Symmetries and dynamics	77
5	Algebraic tools	82
5.1	C*-algebras	82
5.2	Examples	87
5.3	States and representations	90
5.4	Dynamical systems and von Neumann algebras	96
5.5	Notes	102
6	Fermionic dynamical systems	103
6.1	Fermions in Fock space	103
6.1.1	Fock space	103
6.1.2	Creation and annihilation	105
6.1.3	Second quantization	108
6.2	The CAR-algebra	113
6.2.1	Canonical anticommutation relations	113
6.2.2	Quasi-free automorphisms	114
6.2.3	Quasi-free states	117
6.3	Notes	121
7	Ergodic theory	122
7.1	Ergodicity in classical systems	122
7.2	Ergodicity in quantum systems	125
7.2.1	Asymptotic Abelianness	125
7.2.2	Multitime correlations	132
7.2.3	Fluctuations around ergodic means	135
7.3	Lyapunov exponents	139
7.3.1	Classical dynamics	140
7.3.2	Quantum dynamics	143
7.4	Notes	144
8	Quantum irreversibility	146
8.1	Measurement theory	146
8.2	Open quantum systems	151
8.3	Complete positivity	153
8.4	Quantum dynamical semigroups	160
8.5	Quasi-free completely positive maps	164

8.6	Notes	167
9	Entropy	169
9.1	von Neumann entropy	171
9.1.1	Technical preliminaries	171
9.1.2	Properties of von Neumann's entropy	174
9.1.3	Mean entropy	176
9.1.4	Entropy of quasi-free states	178
9.2	Relative entropy	181
9.2.1	Finite-dimensional case	181
9.2.2	Maximum entropy principle	182
9.2.3	Algebraic setting	184
9.3	Notes	185
10	Dynamical entropy	186
10.1	Operational partitions	188
10.2	Dynamical entropy	195
10.2.1	Symbolic dynamics	195
10.2.2	The entropy	197
10.3	Some technical results	200
10.4	Examples	205
10.4.1	The quantum shift	205
10.4.2	The free shift	207
10.4.3	Infinite entropy	208
10.4.4	Powers-Price shifts	209
10.5	Notes	211
11	Classical dynamical entropy	213
11.1	The Kolmogorov-Sinai invariant	213
11.2	H-density	218
12	Finite quantum systems	225
12.1	Quantum chaos	225
12.1.1	Time scales	226
12.1.2	Spectral statistics	226
12.1.3	Semi-classical limits	227
12.2	The kicked top	227
12.2.1	The model	227
12.2.2	The classical limit	228
12.2.3	Kicked mean-field Heisenberg model	228
12.2.4	Chaotic properties	229
12.3	Gram matrices	230
12.4	Entropy production	235
12.5	Notes	238
13	Model systems	240

13.1	Entropy of the quantum cat map	240
13.2	Ruelle's inequality	243
13.2.1	Non-commutative Riemannian structures	244
13.2.2	Non-commutative Lyapunov exponents	246
13.2.3	Ruelle's inequality	247
13.2.4	Examples	248
13.3	Quasi-free Fermion dynamics	249
13.3.1	Description of the model	250
13.3.2	Main result	251
13.3.3	Sketch of the proof	251
13.4	Notes	256
14	Epilogue	257
	References	259
	Index	269
