

# **QUANTUM MANY-PARTICLE SYSTEMS**

**JOHN W. NEGELE**

Massachusetts Institute of Technology

**HENRI ORLAND**

Service de Physique Théorique, CEA Saclay, France

**Westview Advanced Book Program**

A Member of the Perseus Books Group

## CONTENTS

<b>Chapter</b>	<b>1</b>	<b>Second Quantization and Coherent States</b>	.....	1
	1.1	Quantum Mechanics of a Single Particle	.....	1
	1.2	Systems of Identical Particles	.....	4
	1.3	Many-Body Operators	.....	9
	1.4	Creation and Annihilation Operators	.....	11
	1.5	Coherent States	.....	20
		Boson Coherent States	.....	20
		Grassmann Algebra	.....	25
		Fermion Coherent States	.....	29
		Gaussian Integrals	.....	33
		Problems for Chapter 1	.....	37
<b>Chapter</b>	<b>2</b>	<b>General Formalism at Finite Temperature</b>	.....	47
	2.1	Introduction	.....	47
		Quantum Statistical Mechanics	.....	47
		Physical Response Functions and Green's Functions	.....	49
		Approximation Strategies	.....	53
	2.2	Functional Integral Formulation	.....	57
		Feynman Path Integral	.....	57
		Imaginary-Time Path Integral and the Partition Function	.....	63
		Coherent State Functional Integral	.....	66
		The Partition Function for Many-Particle Systems	.....	68
	2.3	Perturbation Theory	.....	74
		Wick's Theorem	.....	75
		Labeled Feynman Diagrams	.....	78
		Unlabeled Feynman Diagrams	.....	82
		Hugenholtz Diagrams	.....	88
		Frequency and Momentum Representation	.....	92
		The Linked Cluster Theorem	.....	96
		Calculation of Observables and Green's functions	.....	97
	2.4	Irreducible Diagrams and Integral Equations	.....	105
		Generating Function for Connected Green's Functions	.....	105
		The Effective Potential	.....	108
		The Self-Energy and Dyson's Equation	.....	111
		Higher-Order Vertex Functions	.....	115
	2.5	Stationary-Phase Approximation and Loop Expansion	.....	120
		One-Dimensional Integral	.....	121
		Feynman Path Integral	.....	123
		Many-Particle Partition Function	.....	124
		Problems for Chapter 2	.....	131

<b>Chapter</b>	<b>3</b>	<b>Perturbation Theory at Zero Temperature</b>	<b>138</b>
<b>3.1</b>	<b>Feynman Diagrams</b>	<b>138</b>	
<b>Observables</b>	<b>138</b>		
<b>Zero-Temperature Fermion Propagators</b>	<b>142</b>		
<b>Fermion Diagram Rules</b>	<b>146</b>		
<b>Bosons</b>	<b>153</b>		
<b>3.2</b>	<b>Time-Ordered Diagrams</b>	<b>157</b>	
<b>3.3</b>	<b>The Zero-Temperature Limit</b>	<b>164</b>	
<b>Problems for Chapter 3</b>	<b>167</b>		
<b>Chapter</b>	<b>4</b>	<b>Order Parameters and Broken Symmetry</b>	<b>176</b>
<b>4.1</b>	<b>Introduction</b>	<b>176</b>	
<b>Phases of Two Familiar Systems</b>	<b>176</b>		
<b>Phenomenological Landau Theory</b>	<b>179</b>		
<b>Broken Symmetry</b>	<b>184</b>		
<b>4.2</b>	<b>General Formulation with Order Parameters</b>	<b>185</b>	
<b>Infinite Range Ising Model</b>	<b>185</b>		
<b>Generalizations</b>	<b>190</b>		
<b>Physical Examples</b>	<b>192</b>		
<b>4.3</b>	<b>Mean Field Theory</b>	<b>195</b>	
<b>Legendre Transform</b>	<b>195</b>		
<b>Ferromagnetic Transition for Classical Spins</b>	<b>197</b>		
<b>Application to General Systems</b>	<b>204</b>		
<b>4.4</b>	<b>Fluctuations</b>	<b>207</b>	
<b>Landau Ginzburg Theory and Dimensional Analysis</b>	<b>207</b>		
<b>One-Loop Corrections</b>	<b>211</b>		
<b>Continuous Symmetry</b>	<b>214</b>		
<b>One-Loop Corrections for the <math>x - y</math> model</b>	<b>217</b>		
<b>Lower Critical Dimension</b>	<b>220</b>		
<b>The Anderson-Higgs Mechanism</b>	<b>222</b>		
<b>Problems for Chapter 4</b>	<b>226</b>		
<b>Chapter</b>	<b>5</b>	<b>Green's Functions</b>	<b>235</b>
<b>5.1</b>	<b>Introduction</b>	<b>235</b>	
<b>Definitions</b>	<b>235</b>		
<b>Evaluation of Observables</b>	<b>237</b>		
<b>5.2</b>	<b>Analytic Properties</b>	<b>240</b>	
<b>Zero Temperature Green's Functions</b>	<b>240</b>		
<b>Finite Temperature Green% Functions</b>	<b>244</b>		
<b>5.3</b>	<b>Physical Content of the Self Energy</b>	<b>249</b>	
<b>Quasiparticle Pole</b>	<b>251</b>		
<b>Effective Masses</b>	<b>255</b>		
<b>Optical Potential</b>	<b>259</b>		
<b>5.4</b>	<b>Linear Response</b>	<b>262</b>	
<b>The Response Function</b>	<b>262</b>		
<b>Random Phase Approximation</b>	<b>265</b>		

Zero Sound .....	271
Matrix Form of RPA .....	276
Sum Rules and Examples .....	277
5.5 Magnetic Susceptibility of a Fermi Gas .....	281
Static Susceptibility at Zero Temperature .....	281
Static Susceptibility at Finite Temperature .....	282
Dynamic Susceptibility at Zero Temperature .....	284
Dynamic Susceptibility at Finite Temperature .....	284
Problems for Chapter 5 .....	285
<b>Chapter 6 The Landau Theory of Fermi Liquide .....</b>	<b>296</b>
6.1 Quasiparticles and their Interactions .....	296
6.2 Observable Properties of a Normal Fermi Liquid .....	299
Equilibrium Properties .....	299
Nonequilibrium Properties and Collective Modes .....	305
6.3 Microscopic Foundation .....	313
Calculation of the Quasiparticle Interaction .....	313
Problems for Chapter 6 .....	324
<b>Chapter 7 Further Development of Functional Integrals .....</b>	<b>332</b>
7.1 Representations of the Evolution Operator .....	332
The Auxiliary Field .....	332
Overcomplete Sets of States .....	336
7.2 Ground State Properties for Finite Systems .....	340
The Resolvent Operator .....	340
Static Hartree Approximation .....	342
RPA Corrections .....	344
The Loop Expansion .....	348
7.3 Transition Amplitudes .....	350
8-Matrix Elements .....	352
7.4 Collective Excitations and Tunneling .....	353
Example of One Degree of Freedom .....	354
Eigenstates of Large Amplitude Collective Motion .....	360
Barrier Penetration and Spontaneous Fission .....	364
Conceptual Questions .....	370
7.5 Large Orders of Perturbation Theory .....	371
Study of a Simple Integral .....	372
Borel Summation .....	373
The Anharmonic Oscillator .....	376
Problems for Chapter 7 .....	382
<b>Chapter 8 Stochastic Methode .....</b>	<b>400</b>
8.1 Monte Carlo Evaluation of Integrals .....	400
Central Limit Theorem .....	401
Importance Sampling .....	403
8.2 Sampling Techniques .....	406
Sampling Simple Functions .....	406

xiv CONTENTS

<b>Markov Processes .....</b>	<b>408</b>
Neumann-Ulam Matrix Inversion	412
<b>Microcanonical Methods .....</b>	<b>413</b>
<b>8.3 Evaluation of One-Particle Path Integral</b>	<b>416</b>
Observables .....	416
Sampling the Action .....	417
Initial Value Random Walk .....	419
Tunneling .....	423
<b>8.4 Many Particle Systems</b>	<b>426</b>
Path Integral in Coordinate Representation .....	426
Functional Integrals Over Fields .....	431
<b>8.5 Spin Systems and Lattice Fermions</b>	<b>434</b>
Checkerboard Decomposition .....	435
Special Methods for Spins .....	438
Problems for Chapter 8 .....	440
<b>References .....</b>	<b>447</b>
<b>Index .....</b>	<b>455</b>
