

Radio Network Planning and Optimisation for UMTS

Second Edition

Edited by

Jaana Laiho and Achim Wacker

Both of Nokia Networks, Nokia Group, Finland

Tomáš Novosad

Nokia Networks, Nokia Group, USA

JOHN WILEY & SONS, LTD

Contents

Preface	xiii
Acknowledgements	xvii
Abbreviations	xix
1 Introduction	1
<i>Jaana Laiho, Achim Wacker, Tomáš Novosad, Peter Muszynski, Petri Jolma and Roman Pichna</i>	
1.1 A Brief Look at Cellular History	1
1.2 Evolution of Radio Network Planning	2
1.3 Introduction to Radio Network Planning and Optimisation for UMTS	5
1.4 Future Trends	9
1.4.1 Towards a Service-driven Network Management	10
1.4.2 Wireless Local Area Networks (WLANs)	11
1.4.3 Next-generation Mobile Communication	15
References	16
2 Introduction to WCDMA for UMTS	19
<i>Tomáš Novosad, David Soldani, Kari Sipilä, Tero Kola and Achim Wacker</i>	
2.1 Mathematical Background of Spread Spectrum CDMA Systems	19
2.1.1 Multiple Access	19
2.1.2 Spread Spectrum Modulation	20
2.1.3 Tolerance of Narrowband Interference	21
2.2 Direct Sequence Spread Spectrum System	22
2.2.1 Modulation Example	23
2.2.2 Tolerance of Wideband Interference	24
2.2.3 Operation in Multi-path Environment	26
2.3 CDMA in Cellular Radio Networks	27
2.3.1 Universal Frequency Reuse	27
2.3.2 Soft Handover	27
2.3.3 Power Control	28

2.4	WCDMA Logical, Transport and Physical Channels	28
2.4.1	High-level UMTS Architecture Model	28
2.4.2	Radio Interface Protocol Architecture and Logical Channels	30
2.4.3	Transport Channels	37
2.4.4	Physical Channels and Mapping of Transport Channels (FDD)	45
2.4.5	High-speed Downlink Packet Access (HSDPA)	60
2.4.6	Timing and Synchronisation in UTRAN (FDD)	65
2.4.7	Spreading, Scrambling and Channelisation Concepts	69
2.5	WCDMA Radio Link Performance Indicators	75
2.5.1	Definitions	76
2.5.2	Classification according to Multi-path Channel Conditions and Services	80
2.5.3	Link-level Simulation Principles	83
2.5.4	Physical-layer Measurements Supporting the Measurement of Link-level Performance in a Live Network	89
	References	91
3	WCDMA Radio Network Planning	93
	<i>Achim Wacker, Jaana Laiho, Tomáš Novosad, Terhi Rautiainen and Kimmo Terävä</i>	
3.1	Dimensioning	95
3.1.1	WCDMA-specific Issues in Radio Link Budgets	95
3.1.2	Receiver Sensitivity Estimation	98
3.1.3	Shadowing Margin and Soft Handover Gain Estimation	99
3.1.4	Cell Range and Cell Coverage Area Estimation	100
3.1.5	Capacity and Coverage Analysis in the Initial Planning Phase	100
3.1.6	Dimensioning of WCDMA Networks with HSDPA	102
3.1.7	RNC Dimensioning	105
3.2	Detailed Planning	109
3.2.1	General Requirements for a Radio Network Planning Tool	110
3.2.2	Initialisation: Defining the Radio Network Layout	124
3.2.3	Detailed Uplink and Downlink Iterations	129
3.2.4	Adjacent Channel Interference Calculations	137
3.2.5	Post-processing: Network Coverage Prediction and Common Channel Analysis	139
3.3	Verification of Dimensioning with Static Simulations	142
3.3.1	Macro-cellular Network Layout	143
3.3.2	Introduction to the Simulation Parameters	144
3.4	Verification of Static Simulator with Dynamic Simulations	149
3.4.1	Introduction to the Dynamic Simulator	149
3.4.2	Comparison of the Results	151
3.5	Optimisation of the Radio Network Plan	154
3.5.1	Ideal Case	154
3.5.2	Shinjuku Case	158

3.6	Interference in WCDMA Multi-operator Environment	162
3.6.1	Sources of Adjacent Channel Interference	163
3.6.2	Minimum Coupling Loss	164
3.6.3	Dead Zones	166
3.6.4	ACI Simulation Cases	166
3.6.5	Guidelines for Radio Network Planning to Avoid ACI	174
3.7	Cell Deployment Strategies	175
3.7.1	Rollout	176
3.7.2	Hierarchical Cell Structures in WCDMA Networks	177
	References	194
4	Radio Resource Utilisation	197
	<i>Achim Wacker, Jaana Laiho, Tomáš Novosad, David Soldani, Chris Johnson, Tero Kola and Ted Buot</i>	
4.1	Introduction to Radio Resource Management	197
4.2	Power Control	198
4.2.1	Open-loop Power Control	198
4.2.2	Power Control on Downlink Common Channels	200
4.2.3	Inner-loop Power Control	201
4.2.4	Outer-loop Power Control	207
4.2.5	Power Control during Compressed Mode	209
4.2.6	Power Control with Transmit Power Control Command Errors	210
4.2.7	Fast Power Control and User Equipment Speed	210
4.3	Handover Control	211
4.3.1	Intra-system–Intra-frequency Soft Handover	212
4.3.2	Intra-system–Intra-frequency Hard Handover	213
4.3.3	Intra-system–Inter-frequency Handover	213
4.3.4	Inter-system Handover	214
4.3.5	Handover Measurement Reporting	214
4.3.6	Compressed Mode	223
4.3.7	Inter-system Handover Procedure	224
4.4	Congestion Control	233
4.4.1	Definition of Air Interface Load	233
4.4.2	Admission Control	235
4.4.3	Packet Scheduling	237
4.4.4	Load Control	242
4.5	Resource Management	244
4.5.1	The Tree of Orthogonal Channelisation Codes in Downlink	244
4.5.2	Code Management	245
4.6	RRU for High-speed Downlink Packet Access (HSDPA)	250
4.6.1	Power Control for High-speed Downlink Packet Access	250
4.6.2	Congestion Control for High-speed Downlink Packet Access	252
4.6.3	Handover Control and Mobility Management for High-speed Downlink Packet Access	253
4.6.4	Resource Manager for High-speed Downlink Packet Access	255

4.7	Impact of Radio Resource Utilisation on Network Performance	256
4.7.1	Impact of Fast Power Control and Soft Handover on Network Performance	256
4.7.2	Radio Resource Management Optimisation Examples	267
4.7.3	Call Setup Delay	275
	References	277
5	WCDMA–GSM Co-planning Issues	279
	<i>Kari Heiska, Tomáš Novosad, Pauli Aikio, Chris Johnson and Josef Fuhl</i>	
5.1	Radio Frequency Issues	279
5.1.1	Thermal Noise	279
5.1.2	Man-made Noise	281
5.1.3	Interference Scenarios	281
5.1.4	Interference Reduction Methods	282
5.2	Noise Measurements	285
5.2.1	Acceptable Radio Frequency Environment	285
5.2.2	Conducting Measurements in a Real Environment	287
5.2.3	Measurement Results	289
5.2.4	Conclusions	292
5.3	Radio Network Planning Issues	293
5.3.1	Co-planning Process	294
5.3.2	Transmission Planning	301
5.3.3	Perception of Different Technologies by the End-user	302
5.3.4	Tight Usage of Frequency Spectrum by Different Technologies	302
5.4	Narrowband and WCDMA System Operation in Adjacent Frequency Bands	303
5.4.1	Interference Mechanisms	305
5.4.2	Worst Case Analysis	308
5.4.3	Simulation Case Study with a Static Simulator	310
5.4.4	Capacity Reduction	323
5.4.5	Summary and Radio Network Planning Guidelines	327
	References	329
6	Coverage and Capacity Enhancement Methods	331
	<i>Chris Johnson, Achim Wacker, Juha Ylitalo and Jyri Hämäläinen</i>	
6.1	Introduction	331
6.2	Techniques for Improving Coverage	332
6.2.1	Uplink and Downlink Coverage Limited Scenarios	332
6.2.2	Link Budget Analysis	333
6.3	Techniques for Improving Capacity	335
6.3.1	Uplink and Downlink Capacity Limited Scenarios	335
6.3.2	Load Equation Analysis	336
6.3.3	Identifying the Limiting Link	337

6.4	Uplink Cell Load and Base Station Transmit Power	338
6.4.1	Impact of Uplink Cell Load	339
6.4.2	Impact of Base Station Transmit Power	339
6.5	Additional Carriers and Scrambling Codes	342
6.5.1	Impact of Additional Carriers	342
6.5.2	Impact of Additional Scrambling Codes	344
6.6	Mast Head Amplifiers and Active Antennas	346
6.6.1	Mathematical Background	346
6.6.2	Impact of Mast Head Amplifiers and Active Antennas	347
6.6.3	Practical Considerations	349
6.7	Remote RF Head Amplifiers	349
6.7.1	Mathematical Background	351
6.7.2	Impact of Remote RF Head Amplifiers	351
6.7.3	Practical Considerations	352
6.8	Higher Order Receive Diversity	352
6.8.1	Impact of Higher Order Receive Diversity	353
6.8.2	Practical Considerations	354
6.9	Transmit Diversity	355
6.9.1	Impact of Transmit Diversity	357
6.9.2	Practical Considerations	359
6.10	Multiple Input Multiple Output in UTRA FDD	360
6.10.1	Mathematical Background	360
6.10.2	Impact of MIMO	362
6.10.3	Practical Considerations	362
6.10.4	Candidate MIMO Algorithms in 3GPP Standardisation	364
6.10.5	MIMO in UTRA FDD Uplink	367
6.11	Beamforming	367
6.11.1	Mathematical Background	368
6.11.2	Impact of Beamforming	369
6.11.3	Practical Considerations	370
6.11.4	Impact of Fixed Beam Approach upon Radio Resource Management Algorithms	372
6.12	Rollout Optimised Configuration	373
6.12.1	Impact of Rollout Optimised Configuration	374
6.12.2	Practical Considerations	376
6.13	Sectorisation	376
6.13.1	Impact of Sectorisation	377
6.13.2	Practical Considerations	379
6.14	Repeaters	380
6.14.1	Impact of Repeaters	382
6.14.2	Practical Considerations	383
6.15	Micro-cell Deployment	383
6.15.1	Impact of Micro-cells	384
6.16	Capacity Upgrade Process	387
6.17	Summary of Coverage and Capacity Enhancement Methods	389
	References	392

7	Radio Network Optimisation Process	395
	<i>Jaana Laiho, Markus Djupsund, Anneli Kortenieni, Jochen Grandell and Mikko Toivonen</i>	
7.1	Introduction to Radio Network Optimisation Requirements	395
7.1.1	The Operations System's Role in the Optimisation Process	398
7.2	Introduction to the Telecom Management Network Model	410
7.3	Tools in Optimisation	414
7.3.1	Planning Tool Level Optimisation	415
7.3.2	Configuration Management in a Network Management System	419
7.3.3	Performance Management in Network Elements and in the Operations System	422
7.3.4	Measurement Applications in Network Elements and in the Network Management System	437
7.3.5	Optimisation Using Operations System Tools	446
7.3.6	Field Measurement Tool	447
7.4	Summary	452
	References	454
8	UMTS Quality of Service	455
	<i>Jaana Laiho, Vilho Räsänen and Nilmini Lokuge</i>	
8.1	Definition of Quality of Service	455
8.2	End-user Service Classification	456
8.3	Characteristics and Requirements of Services	457
8.3.1	Generic Issues	458
8.3.2	Data Transfer	458
8.3.3	Interactive Data Transfer	459
8.3.4	Messaging	460
8.3.5	Streaming	460
8.3.6	Conferencing Media	461
8.4	3GPP Bearer Concept	461
8.4.1	Architectural Entities	462
8.4.2	Bearer Layers	463
8.4.3	Packet Data Protocol Context Characterisation	463
8.4.4	Comments about 3GPP Bearers	464
8.5	Overview of 3GPP Quality of Service Architecture	465
8.5.1	3GPP Quality of Service Architecture	465
8.5.2	Support for the IP Multimedia Sub-system	467
8.5.3	External Bearer Service	469
8.6	Quality of Service Management in UMTS	469
8.6.1	Introduction to Quality of Service Management Challenges	470
8.6.2	Radio Bearer Mapping of UMTS Traffic Classes	473
8.6.3	Utilisation of Quality of Service in the UMTS Domain	474
8.7	Concluding Remarks	501
	References	502

9	Advanced Analysis Methods and Radio Access Network Autotuning	505
	<i>Jaana Laiho, Pekko Vehviläinen, Albert Höglund, Mikko Kylväjä, Kimmo Valkealahti and Ted Buot</i>	
9.1	Introduction	505
9.2	Advanced Analysis Methods for Cellular Networks	506
9.2.1	Introduction to Data Mining	506
9.2.2	Knowledge Discovery in Databases and Data Mining	507
9.2.3	Classification Trees	511
9.2.4	Anomaly (Outlier) Detection with Classification Tree	513
9.2.5	Self-Organising Map	513
9.2.6	Performance Monitoring Using the Self-Organising Map: GSM Network	515
9.2.7	Performance Monitoring Using the Self-Organising Map: UMTS Network	517
9.2.8	<i>High Level Performance Analysis by Clustering Network Performance Data: Case Study</i>	528
9.3	Automatic Optimisation	536
9.3.1	Examples of Automated Optimisation	539
9.3.2	Network Scenario and Data Used in Algorithms with Cost Function	539
9.3.3	Measurements and Costs Used in Algorithms	540
9.3.4	Autotuning in the Mobility Management Sub-system	543
9.3.5	Autotuning in the Call Admission Control Sub-system	552
9.3.6	Capacity Optimisation and Traffic Balancing	561
9.4	Summary	569
	References	569
10	Other 3G Radio Access Technologies	573
	<i>Jussi Reunanen, Simon Browne, Pauliina Erätuuli, Ann-Louise Johansson, Martin Kristensson, Jaana Laiho, Mats Larsson, Tomáš Novosad and Jussi Sipola</i>	
10.1	GSM Packet Data Services	573
10.1.1	Introduction	574
10.1.2	Modulation and Coding Schemes	574
10.1.3	EDGE Radio Link Performance	577
10.1.4	GPRS Radio Link Performance	582
10.1.5	Coverage	583
10.1.6	Capacity Planning	586
10.1.7	Mobility Management	594
10.1.8	Frequency Hopping Techniques	598
10.1.9	Conclusion	600
10.1.10	EDGE Performance Assessment	600
10.1.11	Quality of Service and Service Optimisation for EGPRS	603

10.2	Time Division Duplex Mode of WCDMA (UTRA TDD)	606
10.2.1	Some Time Division Duplex Specific Properties	606
10.2.2	System Scenarios	607
10.2.3	Synchronisation of Cells	610
10.2.4	Single-operator Time Division Duplex Networks	610
10.2.5	Synchronisation in Multi-operator Time Division Duplex Networks	611
10.2.6	Erlang Capacity for Time Division Duplex Networks: A Simple Way of Estimating Capacity per Cell	612
10.2.7	Co-existing Time Division Duplex and Frequency Division Duplex Networks	612
10.2.8	Co-located and Close Proximity Local Area Base Station System (BSS)	614
10.2.9	Radio Performance	614
10.2.10	Time Division Duplex and Frequency Division Duplex Processing Gains	615
10.2.11	Time Division Duplex Link Budget Examples	615
10.2.12	Some Other Important Parameters and their Effect on the Radio Link Budget	618
10.2.13	Summary	618
	References	619
	Index	621
