## CONTENTS

<b>Introduction</b> .....	1
0.1. Discrete trees .....	2
0.2. Galton-Watson trees .....	3
0.3. The continuous height process .....	5
0.4. From discrete to continuous trees .....	8
0.5. Duality properties of the exploration process .....	10
0.6. Marginals of trees coded by the height process .....	11
0.7. The Lévy snake .....	13
 <b>1. The height process</b> .....	17
1.1. Preliminaries on Lévy processes .....	17
1.2. The height process and the exploration process .....	24
1.3. Local times of the height process .....	31
1.4. Three applications .....	39
 <b>2. Convergence of Galton-Watson trees</b> .....	47
2.1. Preliminaries .....	47
2.2. The convergence of finite-dimensional marginals .....	48
2.3. The functional convergence .....	54
2.4. Convergence of contour processes .....	61
2.5. A joint convergence and an application to conditioned trees .....	62
2.6. The convergence of reduced trees .....	67
2.7. The law of the limiting reduced tree .....	68
 <b>3. Marginals of continuous trees</b> .....	75
3.1. Duality properties of the exploration process .....	75
3.2. The tree associated with Poissonian marks .....	85
3.3. Marginals of stable trees .....	93

<b>4. The Lévy snake .....</b>	99
4.1. The construction of the Lévy snake .....	99
4.2. The connection with superprocesses .....	105
4.3. Exit measures .....	114
4.4. Continuity properties of the Lévy snake .....	118
4.5. The Brownian motion case .....	120
4.6. The law of the Lévy snake at a first exit time .....	126
4.7. The reduced tree in an open set .....	132
<b>Bibliography .....</b>	141
<b>Notation Index .....</b>	145
<b>Index .....</b>	147
