

RAPID PROTOTYPING

Principles and Applications

RAFIQ NOORANI, Ph.D.

Professor of Mechanical Engineering
Loyola Marymount University
Los Angeles, CA

WILEY

JOHN WILEY & SONS, INC.

CONTENTS

Preface	xv
Acknowledgments	xix
About the Author	xxi
1 Introduction	1
1.1 Introduction	1
1.2 World of RP	2
1.2.1 What Is RP?	2
1.2.2 Basic Process	4
1.2.3 Industries Using RP	5
1.2.4 Growth of RP	5
1.2.5 Installations by Countries	9
1.2.6 Technology Development	9
1.3 History of RP	9
1.3.1 Early History	10
1.3.2 Early Solid Freeform Fabrication	12
1.3.3 Commercial Development	14
1.3.4 Chronology of RP Development	14
1.4 Development of RP Systems	14
1.4.1 3D Systems' Stereolithography Process	14
1.4.2 3D Systems' Selective Laser Sintering	17
1.4.3 Helisys' Laminated Object Manufacturing	17

1.4.4	Stratasys' Fused Deposition Modeling	19
1.4.5	Solidscape's 3D Printing	20
1.5	Applications in Education and Industry	21
1.5.1	Application in Product Development	21
1.5.2	Application in Reverse Engineering	23
1.5.3	Application in Casting and Pattern Making	24
1.5.4	Application in Rapid Tooling	26
1.5.5	Application in Medicine	26
1.5.6	Application in Rapid Manufacturing	27
1.6	Case Study: Fabricating a Prototype Using 3D Printing	28
1.7	Summary	30
	Problems	32
	References	32
2	Principles of Rapid Prototyping	34
2.1	Principles of Automated Processes	34
2.2	RP Fundamentals	36
2.2.1	Creation of Solid Models	36
2.2.2	Conversion to STL File	37
2.2.3	Slicing the File	43
2.2.4	Making or "Growing" the Prototype	43
2.2.5	Postprocessing	44
2.3	Problems with STL File Format	46
2.4	Other Translators	48
2.5	Case Study: Designing and Prototyping a Spur Gear	50
2.5.1	Introduction	50
2.5.2	Project Procedure	51
2.6	Summary	53
	Problems	54
	References	56
3	Liquid-Based RP Systems	57
3.1	Classification of RP Systems	57
3.1.1	Liquid-Based Systems	57
3.1.2	Solid-Based Systems	58
3.1.3	Powder-Based Systems	58

- 3.2 3D Systems' Stereolithography Apparatus (SLA) 58
 - 3.2.1 Company Profile 58
 - 3.2.2 Details of Stereolithography ("SL") Process 59
 - 3.2.3 SLA Systems 68
 - 3.2.4 Advantages and Disadvantages 72
 - 3.2.5 Applications and Uses 72
- 3.3 D-MEC's Solid Creation System 72
 - 3.3.1 Company Profile 72
 - 3.3.2 Solid Creation System 73
 - 3.3.3 Products 73
 - 3.3.4 D-MEC Modeling 76
- 3.4 CMET Solid Object UV Laser Plotter 77
 - 3.4.1 Company Profile 77
 - 3.4.2 SOUP Process 77
 - 3.4.3 SOUP Machines 77
 - 3.4.4 Advantages and Disadvantages 78
- 3.5 Summary 78
 - Problems 79
 - References 79

4 Solid-Based RP Systems

80

- 4.1 Stratasys' Fused Deposition Modeling Systems 80
 - 4.1.1 Company Profile 80
 - 4.1.2 Principles 81
 - 4.1.3 Process 84
 - 4.1.4 Products 85
 - 4.1.5 Advantages and Disadvantages 90
 - 4.1.6 Applications and Uses 92
- 4.2 Helysis Laminated Object Manufacturing System 93
 - 4.2.1 Company Profile 93
 - 4.2.2 Principles 94
 - 4.2.3 Process 94
 - 4.2.4 Products 94
 - 4.2.5 Advantages and Disadvantages 94
 - 4.2.6 Applications and Uses 95
- 4.3 Solidscape's 3D Printing and Deposition Milling 96
 - 4.3.1 Company Profile 96
 - 4.3.2 Principles of Solidscape Prototyping 96
 - 4.3.3 Process 96
 - 4.3.4 Products 97

- 4.3.5 Advantages and Disadvantages 98
- 4.3.6 Applications 100
- 4.4 3D Systems' Multijet Modeling System 100
 - 4.4.1 Company Profile 100
 - 4.4.2 Principles 100
 - 4.4.3 Process 100
 - 4.4.4 Products 101
 - 4.4.5 Advantages and Disadvantages 101
 - 4.4.6 Applications and Uses 102
- 4.5 KIRA's Selective Adhesive and Hot Pass (SAHP) System 102
 - 4.5.1 Company Profile 102
 - 4.5.2 Principles 102
 - 4.5.3 Process 102
 - 4.5.4 Products 105
 - 4.5.5 Advantages and Disadvantages 105
 - 4.5.6 Applications and Uses 105
- 4.6 Summary 105
 - Problems 106
 - References 106

5 Powder-Based RP Systems

- 5.1 3D Systems' Selective Laser Sintering 108
 - 5.1.1 Company Profile 108
 - 5.1.2 Principles of SLS Process 108
 - 5.1.3 Principles of Sinter Bonding 109
 - 5.1.4 Process 110
 - 5.1.5 Laser Sintering ("LS") Materials 111
 - 5.1.6 Products 112
 - 5.1.7 Advantages and Disadvantages 114
 - 5.1.8 Applications and Uses 115
- 5.2 MIT's Three-Dimensional Printing 117
 - 5.2.1 Institution 117
 - 5.2.2 Process 118
 - 5.2.3 Major Applications 119
 - 5.2.4 Research and Development 120
- 5.3 Z Corporation's Process (Z406 System) 121
 - 5.3.1 Company Profile 121
 - 5.3.2 Process 121

- 5.4 Soligen's Direct Shell Production Casting 125
 - 5.4.1 Company Profile 125
 - 5.4.2 Model and Specifications 127
 - 5.4.3 Key Strengths 127
 - 5.4.4 Process 129
 - 5.4.5 Applications and Uses 131
 - 5.4.6 Case Studies 133
 - 5.4.7 Research and Development 133
- 5.5 EOS's Laser Sintering Systems 133
 - 5.5.1 Company Profile 133
 - 5.5.2 Models and Specifications 134
 - 5.5.3 Laser Sintering Process 139
 - 5.5.4 Applications and Uses 139
- 5.6 e-Manufacturing using Laser Sintering 140
 - 5.6.1 Introduction 140
 - 5.6.2 Customized Plastic Parts 141
 - 5.6.3 Customized Metal Parts 149
 - 5.6.4 e-Manufacturing in a Brief 153
- 5.7 Summary 154
 - Problems 155
 - References 155

6 Materials for Rapid Prototyping 156

- 6.1 Introduction 156
 - 6.1.1 Nature of Materials 157
 - 6.1.2 Chemical Bonding and Structure 159
- 6.2 Types of Materials 162
 - 6.2.1 Polymers 162
 - 6.2.2 Metals 168
 - 6.2.3 Ceramics 173
 - 6.2.4 Composites 176
- 6.3 Liquid-Based Materials 177
 - 6.3.1 Photopolymer Development 177
 - 6.3.2 Photopolymer Chemistry 177
- 6.4 Solid-Based Materials 181
 - 6.4.1 Polymers 181
 - 6.4.2 Metals 183
 - 6.4.3 Composites 185
- 6.5 Powder-Based Materials 186

6.5.1 Polymers 186

6.5.2 Metals 190

6.5.3 Ceramics 193

6.6 Case Study 194

6.7 Summary 195

Problems 196

References 197

7 Reverse Engineering

199

7.1 Introduction 199

7.2 Measuring Devices 201

7.2.1 Overview 201

7.2.2 Contact-Type Measuring Devices 202

7.2.3 Non-Contact-Type Measuring Devices 203

7.3 CAD Model Construction from Point Clouds 209

7.3.1 Preprocessing 210

7.3.2 Point Clouds to Surface Model Creation 213

7.3.3 Medical Data Processing 216

7.4 Data-Handling and Reduction Methods 221

7.4.1 Uniform-Grid Method 221

7.4.2 Nonuniform-Grid Method 222

7.4.3 Three-Dimensional Grid Methods 226

7.5 Applications and Trends 231

7.5.1 Applications 231

7.5.2 Future Trends 233

7.6 Case Study 234

7.6.1 Introduction 234

7.6.2 Methodology 235

7.6.3 Bronze Cast of OVG 237

7.7 Summary 239

Problems 239

References 241

8 Rapid Tooling

243

8.1 Introduction 243

8.2 Indirect Methods of RT 244

- 8.2.1 Room Temperature Vulcanizing Silicone Rubber Molds 246
- 8.2.2 Spray Metal Tooling 247
- 8.2.3 Sprayed Steel 249
- 8.2.4 Cast Aluminum and Zinc Kirksite Tooling 250
- 8.2.5 Three-Dimensional Keltool 250
- 8.2.6 Vacuum Casting 251
- 8.2.7 Reaction Injection Molding 252
- 8.2.8 Wax Injection Molding 252
- 8.2.9 Spin Casting 252
- 8.2.10 Cast Resin Tooling 253
- 8.2.11 Rapid Solidification Process 253
- 8.2.12 Plaster Molds 254
- 8.2.13 Electroforming 254
- 8.2.14 Investment Cast Tooling 255
- 8.3 Direct Methods of RT 256
 - 8.3.1 Direct ACES Injection Molding Tooling 256
 - 8.3.2 Copper Polyamide Tooling 258
 - 8.3.3 Direct Metal Laser Sintering 258
 - 8.3.4 Selective Laser Sintering RapidSteel 259
 - 8.3.5 Laminated Tooling 260
 - 8.3.6 Laser Engineered Net Shaping 260
 - 8.3.7 Controlled Metal Buildup 261
 - 8.3.8 Prometal 261
- 8.4 Case Study: Sheet-Metal Forming by RT 262
 - 8.4.1 Forming Technologies 262
 - 8.4.2 Stereolithography Process 263
 - 8.4.3 Fused Deposition Modeling 265
 - 8.4.4 Laminated Object Modeling 266
 - 8.4.5 Research Results 266
- 8.5 Summary 267
 - Problems 267
 - References 268

9 Medical Applications in Rapid Prototyping

269

- 9.1 Introduction 269
- 9.2 Medical Applications of RP 270
 - 9.2.1 Presurgical Planning Models 270
 - 9.2.2 Mechanical Bone Replicas 270
 - 9.2.3 Teaching Aids and Simulators 270
 - 9.2.4 Customized Surgical Implants 271

- 9.2.5 Prosthetics and Othotics 271
- 9.2.6 Anthropology 271
- 9.2.7 Forensics 272
- 9.3 Types of Medical Imaging 272
 - 9.3.1 X-Ray Technology 273
 - 9.3.2 Magnetic Resonance Imaging 275
 - 9.3.3 Computed Tomography 276
- 9.4 Software for Making Medical Models 278
 - 9.4.1 MIMICS and the CT Modeler System 278
 - 9.4.2 Velocity²Pro Software by Image3 280
 - 9.4.3 3D-Doctor from Able Software 281
 - 9.4.4 VoXim 281
- 9.5 Medical Materials 282
- 9.6 Other Applications 284
 - 9.6.1 Anthropology 284
 - 9.6.2 Biology and Chemistry 285
- 9.7 Summary 285
 - Problems 286
 - References 287

10 Industry Perspectives

288

- 10.1 Guidelines for Implementation 288
 - 10.1.1 Purchasing Decisions 288
 - 10.1.2 Facilities Planning 289
 - 10.1.3 Environmental Issues 290
- 10.2 Operating Issues 291
 - 10.2.1 Cost Analysis 291
 - 10.2.2 Training of Personnel 293
 - 10.2.3 Maintenance Costs 294
- 10.3 Managing Issues 294
 - 10.3.1 Integrating Technology Within the Company 294
 - 10.3.2 Productivity Advantage 295
 - 10.3.3 Lean Production 297
- 10.4 Service Bureaus 299
 - 10.4.1 What Is a Service Bureau? 300
 - 10.4.2 Reasons for Using Service Bureaus 301
 - 10.4.3 Factors in Choosing a Service Bureau 303
- 10.5 Rapid Prototyping Consortia 304
 - 10.5.1 Benefits in Consortia Affiliation 304

10.5.2 University–Industry Consortia 305

10.5.3 Industry–Industry Consortia 306

10.6 Present and Future Trends 306

10.7 Summary 308

Problems 309

References 309

11 Research and Development

310

11.1 Improvement of FDM Process Using Design of Experiment 310

11.1.1 Abstract 310

11.1.2 Introduction 311

11.1.3 Design of Experiments 312

11.1.4 Selection of Build Parameters 314

11.1.5 Experimental Method 315

11.1.6 Results and Analysis of DOE 318

11.1.7 Factor Analysis and Physical Interpretation 321

11.1.8 Conclusions and Recommendations 324

11.2 Improvement of Part Accuracy 324

11.2.1 Abstract 324

11.2.2 Introduction 325

11.2.3 Theory and Analysis 326

11.2.4 Results and Data Analysis 329

11.2.5 Conclusions and Recommendations 334

11.3 Effects of Cryogenic Processing on RP Materials 334

11.3.1 Abstract 334

11.3.2 Introduction 335

11.3.3 Background 335

11.3.4 Experimental Procedure 336

11.3.5 Results and Discussion 339

11.3.6 Conclusions and Recommendations 341

11.4 New Technologies 344

11.4.1 Laser Engineered Net Shaping 344

11.4.2 Solidica 345

11.4.3 On Demand Manufacturing 346

11.4.4 Direct Material Deposition: OPTOMEC 346

11.5 Summary 348

Problems 349
