Contents

Preface, v

Prologue | The Exponential Function, 1

Chapter 1 | Abstract Integration, 5

- Set-theoretic notations and terminology, 6
- The concept of measurability, 8
- Simple functions, 15
- Elementary properties of measures, 16
- Arithmetic in $[0, \infty]$, 18
- Integration of positive functions, 19
- Integration of complex functions, 24
- The role played by sets of measure zero, 26
- Exercises, 31

Chapter 2 | Positive Borel Measures, 33

- Vector spaces, 33
- Topological preliminaries, 35
- The Riesz representation theorem, 40
- Regularity properties of Borel measures, 47
- Lebesgue measure, 49
- Continuity properties of measurable functions, 53
- Exercises, 56

Chapter 3 | L^p -Spaces, 60

- Convex functions and inequalities, 60
- The L^p -spaces, 64

- Approximation by continuous functions, 68
- Exercises, 70

Chapter 4 | Elementary Hilbert Space Theory, 75

- Inner products and linear functionals, 75
- Orthonormal sets, 81
- Trigonometric series, 88
- Exercises, 92

Chapter 5 | Examples of Banach Space Techniques, 95

- Banach spaces, 95
- Consequences of Baire's theorem, 97
- Fourier series of continuous functions, 101
- Fourier coefficients of L^1 -functions, 103
- The Hahn-Banach theorem, 105
- An abstract approach to the Poisson integral, 109
- Exercises, 112

Chapter 6 | Complex Measures, 117

- Total variation, 117
- Absolute continuity, 121
- Consequences of the Radon-Nikodym theorem, 126
- Bounded linear functionals on L^p , 127
- The Riesz representation theorem, 130
- Exercises, 133

Chapter 7 | Integration on Product Spaces, 136

- Measurability on cartesian products, 136
- Product measures, 138
- The Fubini theorem, 140
- Completion of product measures, 143
- Convolutions, 146
- Exercises, 148

Chapter 8 | Differentiation, 151

- Derivatives of measures, 151
- Functions of bounded variation, 160
- Differentiation of point functions, 165

Differentiable transformations, 169

Exercises, 175

Chapter 9 | Fourier Transforms, 180

Formal properties, 180

The inversion theorem, 182

The Plancherel theorem, 187

The Banach algebra L^1 , 192

Exercises, 195

Chapter 10 | Elementary Properties of Holomorphic Functions, 198

Complex differentiation, 198

Integration over paths, 202

The Cauchy theorem, 206

The power series representation, 209

The open mapping theorem, 214

Exercises, 219

Chapter 11 | Harmonic Functions, 222

The Cauchy-Riemann equations, 222

The Poisson integral, 223

The mean value property, 230

Positive harmonic functions, 232

Exercises, 236

Chapter 12 | The Maximum Modulus Principle, 240

Introduction, 240

The Schwarz lemma, 240

The Phragmen-Lindelöf method, 243

An interpolation theorem, 246

A converse of the maximum modulus theorem, 248

Exercises, 249

Chapter 13 | Approximation by Rational Functions, 252

Preparation, 252

Runge's theorem, 255

Cauchy's theorem, 259

Simply connected regions, 262

Exercises, 265

Chapter 14 | Conformal Mapping, 268

- Preservation of angles, 268
- Linear fractional transformations, 269
- Normal families, 271
- The Riemann mapping theorem, 273
- The class \mathcal{S} , 276
- Continuity at the boundary, 279
- Conformal mapping of an annulus, 282
- Exercises, 284

Chapter 15 | Zeros of Holomorphic Functions, 290

- Infinite products, 290
- The Weierstrass factorization theorem, 293
- The Mittag-Leffler theorem, 296
- Jensen's formula, 299
- Blaschke products, 302
- The Müntz-Szász theorem, 304
- Exercises, 307

Chapter 16 | Analytic Continuation, 312

- Regular points and singular points, 312
- Continuation along curves, 316
- The monodromy theorem, 319
- Construction of a modular function, 320
- The Picard theorem, 324
- Exercises, 325

Chapter 17 | H^p -Spaces, 328

- Subharmonic functions, 328
- The spaces H^p and N , 330
- The space H^2 , 332
- The theorem of F. and M. Riesz, 335
- Factorization theorems, 336
- The shift operator, 341
- Conjugate functions, 345
- Exercises, 347

Chapter 18 | Elementary Theory of Banach Algebras, 351

- Introduction, 351
- The invertible elements, 352

Ideals and homomorphisms, 357

Applications, 360

Exercises, 364

Chapter 19 | Holomorphic Fourier Transforms, 367

Introduction, 367

Two theorems of Paley and Wiener, 368

Quasi-analytic classes, 372

The Denjoy-Carleman theorem, 376

Exercises, 379

Chapter 20 | Uniform Approximation by Polynomials, 382

Introduction, 382

Some lemmas, 383

Mergelyan's theorem, 386

Exercises, 390

Appendix | Hausdorff's Maximality Theorem, 391

Notes and Comments, 393

Bibliography, 401

List of Special Symbols, 403

Index, 405
