Contents

<i>Preface</i>	xv
1 The Theory of Special Relativity	1
1.1 The Lorentz Transformations	2
1.2 Relativistic Velocities	7
1.3 Mass, Momentum and Energy	8
1.4 Four-Vectors	14
1.5 Relativity and Electromagnetism	15
1.6 The Compton Effect	18
1.7 Problems	21
2 Aspects of Angular Momentum	23
2.1 Various Angular Momenta	24
2.2 Angular Momentum and Rotations	29
2.3 Operators and Eigenvectors for Spin 1/2	30
2.4 Operators for Higher Spins	33
2.5 Orbital Magnetic Moments	35
2.6 Spin Without Relativity	38
2.7 Thomas Precession	41
2.8 The Pauli Equation in a Central Potential	46
2.9 Dirac Notation	50
2.10 Clebsch–Gordan and Racah Coefficients	51
2.11 Relativistic Quantum Numbers and Spin-Angular Functions	58
2.12 Energy Levels of the One-Electron Atom	60
2.13 Plane Wave Expansions	62
2.14 Problems	63
3 Particles of Spin Zero	64
3.1 The Klein–Gordon Equation	65

3.2	Relativistic Wavefunctions, Probabilities and Currents	67
3.3	The Fine Structure Constant	72
3.4	The Two-Component Klein–Gordon Equation	73
3.5	Free Klein–Gordon Particles/Antiparticles	77
3.6	The Klein Paradox	85
3.7	The Radial Klein–Gordon Equation	88
3.8	The Spinless Electron Atom	91
3.9	Problems	98
4	The Dirac Equation	99
4.1	The Origin of the Dirac Equation	100
4.2	The Dirac Matrices	103
4.3	Lorentz Invariance of the Dirac Equation	109
4.4	The Non-Relativistic Limit of the Dirac Equation	111
4.5	An Alternative Formulation of the Dirac Equation	118
4.6	Probabilities and Currents	121
4.7	Gordon Decomposition	123
4.8	Forces and Fields	125
4.9	Gauge Invariance and the Dirac Equation	127
4.10	Problems	128
5	Free Particles/Antiparticles	130
5.1	Wavefunctions, Densities and Currents	130
5.2	Free-Particle Solutions	131
5.3	Free-Particle Spin	133
	Rotations and Spinors	139
	A Generalized Spin Operator	142
5.4	Negative Energy States, Antiparticles	145
5.5	Classical Negative Energy Particles?	150
5.6	The Klein Paradox Revisited	152
5.7	Lorentz Transformation of the Free-Particle Wavefunction	154
5.8	Problems	156
6	Symmetries and Operators	157
6.1	Non-Relativistic Spin Projection Operators	158
6.2	Relativistic Energy and Spin Projection Operators	160
6.3	Charge Conjugation	162
6.4	Time-Reversal Invariance	165
6.5	Parity	167
6.6	$\hat{C}\hat{P}\hat{T}$	168
6.7	Angular Momentum Again	171
6.8	Non-Relativistic Limits Again	175
6.9	Second Quantization	176

6.10	Field Operators	186
6.11	Second Quantization in Relativistic Quantum Mechanics	189
6.12	Problems	198
7	Separating Particles from Antiparticles	199
7.1	The Foldy–Wouthuysen Transformation for a Free Particle	200
7.2	Foldy–Wouthuysen Transformation of Operators	203
7.3	<i>Zitterbewegung</i>	206
7.4	Foldy–Wouthuysen Transformation of the Wavefunction	214
7.5	The F–W Transformation in an Electromagnetic Field	216
7.6	Problems	226
8	One-Electron Atoms	227
8.1	The Radial Dirac Equation	228
8.2	Free-Electron Solutions	231
8.3	One-Electron Atoms, Eigenvectors and Eigenvalues	233
8.4	Behaviour of the Radial Functions	243
8.5	The Zeeman Effect	248
8.6	Magnetic Dichroism	254
8.7	Problems	261
9	Potential Problems	263
9.1	A Particle in a One-Dimensional Well	264
9.2	The Dirac Oscillator	269
	The Non-Relativistic Limit	269
	Solution of the Dirac Oscillator	271
	Expectation Values and the Uncertainty Principle	276
9.3	Bloch’s Theorem	280
9.4	The Relativistic Kronig–Penney Model	283
	A One-Dimensional Time-Independent Dirac Equation	283
	A Potential Step	286
	A One-Dimensional Solid	289
9.5	An Electron in Crossed Electric and Magnetic Fields	295
	An Electron in a Constant Magnetic Field	298
	An Electron in a Field for which $ E = c B $	309
9.6	Non-Linear Dirac Equations, the Dirac Soliton	311
9.7	Problems	315
10	More Than One Electron	317
10.1	The Breit Interaction	318
10.2	Two Electrons	322
10.3	Many-Electron Wavefunctions	329
10.4	The Many-Electron Hamiltonian	333

10.5	Dirac–Hartree–Fock Integrals	334
	Single-Particle Integrals	336
	Two-Particle Integrals	337
	The Direct Coulomb Integral	339
	The Exchange Integral	341
10.6	The Dirac–Hartree–Fock Equations	345
	The One-Electron Atom	346
	The Many-Electron Atom	348
10.7	Koopmans' Theorem	351
10.8	Implementation of the Dirac–Hartree–Fock Method	352
10.9	Introduction to Density Functional Theory	363
10.10	Non-Relativistic Density Functional Theory	365
10.11	The Variational Principle and the Kohn–Sham Equation	370
10.12	Density Functional Theory and Magnetism	374
	Density Functional Theory in a Weak Magnetic Field	374
	Density Functional Theory in a Strong Magnetic Field	376
10.13	The Exchange–Correlation Energy	380
10.14	Relativistic Density Functional Theory (RDFT)	386
	RDFT with an External Scalar Potential	387
	RDFT with an External Vector Potential	389
	The Dirac–Kohn–Sham Equation	391
10.15	An Approximate Relativistic Density Functional Theory	395
10.16	Further Development of RDFT	397
10.17	Relativistic Exchange–Correlation Functionals	398
10.18	Implementation of RDFT	400
11	Scattering Theory	407
11.1	Green's Functions	408
11.2	Time-Dependent Green's Functions	411
11.3	The T -Operator	412
11.4	The Relativistic Free-Particle Green's Function	413
11.5	The Scattered Particle Wavefunction	416
11.6	The Scattering Experiment	418
11.7	Single-Site Scattering in Zero Field	420
11.8	Radial Dirac Equation in a Magnetic Field	426
11.9	Single-Site Scattering in a Magnetic Field	428
11.10	The Single-Site Scattering Green's Function	433
11.11	Transforming Between Representations	435
11.12	The Scattering Path Operator	437
11.13	The Non-Relativistic Free Particle Green's Function	440
11.14	Multiple Scattering Theory	443
11.15	The Multiple Scattering Green's Function	447
11.16	The Average T -Matrix Approximation	450

11.17	The Calculation of Observables	452
	The Band Structure	452
	The Fermi Surface	456
	The Density of States	457
	The Charge Density	461
	Magnetic Moments	462
	Energetic Quantities	465
11.18	Magnetic Anisotropy	467
	The Non-Relativistic Limit, the RKKY Interaction	472
	The Origin of Anisotropy	475
12	Electrons and Photons	480
12.1	Photon Polarization and Angular Momentum	481
12.2	Quantizing the Electromagnetic Field	483
12.3	Time-Dependent Perturbation Theory	485
12.4	Photon Absorption and Emission in Condensed Matter	494
12.5	Magneto-Optical Effects	497
12.6	Photon Scattering Theory	505
12.7	Thomson Scattering	509
12.8	Rayleigh Scattering	511
12.9	Compton Scattering	514
12.10	Magnetic Scattering of X-Rays	522
12.11	Resonant Scattering of X-Rays	533
13	Superconductivity	536
13.1	Do Electrons Find Each Other Attractive?	537
13.2	Superconductivity, the Hamiltonian	539
13.3	The Dirac–Bogolubov–de Gennes Equation	542
13.4	Solution of the Dirac–Bogolubov–de Gennes Equations	544
13.5	Observable Properties of Superconductors	547
13.6	Electrodynamics of Superconductors	551
Appendix A	The Uncertainty Principle	556
Appendix B	The Confluent Hypergeometric Function	559
B.1	Relations to Other Functions	560
Appendix C	Spherical Harmonics	562
Appendix D	Unit Systems	567
Appendix E	Fundamental Constants	569
	References	570
