Contents

1	Introduction	1
2	Rigidity of hyperbolic manifolds	11
2.1	The Hausdorff topology	11
2.2	Manifolds and geometric limits	12
2.3	Rigidity	17
2.4	Geometric inflexibility	24
2.5	Deep points and differentiability	32
2.6	Shallow sets	34
3	Three-manifolds which fiber over the circle	41
3.1	Structures on surfaces and 3-manifolds	42
3.2	Quasifuchsian groups	44
3.3	The mapping class group	46
3.4	Hyperbolic structures on mapping tori	50
3.5	Asymptotic geometry	53
3.6	Speed of algebraic convergence	60
3.7	Example: torus bundles	65
4	Quadratic maps and renormalization	75
4.1	Topologies on domains	75
4.2	Polynomials and polynomial-like maps	76
4.3	The inner class	78
4.4	Improving polynomial-like maps	83
4.5	Fixed points of quadratic maps	86
4.6	Renormalization	88
4.7	Simple renormalization	91
4.8	Infinite renormalization	92
5	Towers	95
5.1	Definition and basic properties	95
5.2	Infinitely renormalizable towers	97
5.3	Bounded combinatorics	99
5.4	Robustness and inner rigidity	101

5.5	Unbranched renormalizations	103
6	Rigidity of towers	105
6.1	Fine towers	106
6.2	Expansion	108
6.3	Julia sets fill the plane	112
6.4	Proof of rigidity	114
6.5	A tower is determined by its inner classes	117
7	Fixed points of renormalization	119
7.1	Framework for the construction of fixed points	119
7.2	Convergence of renormalization	127
7.3	Analytic continuation of the fixed point	128
7.4	Real quadratic mappings	132
8	Asymptotic structure in the Julia set	135
8.1	Rigidity and the postcritical Cantor set	135
8.2	Deep points of Julia sets	139
8.3	Small Julia sets everywhere	143
8.4	Generalized towers	149
9	Geometric limits in dynamics	151
9.1	Holomorphic relations	151
9.2	Nonlinearity and rigidity	158
9.3	Uniform twisting	164
9.4	Quadratic maps and universality	167
9.5	Speed of convergence of renormalization	170
10	Conclusion	175
	Appendix A. Quasiconformal maps and flows	183
A.1	Conformal structures on vector spaces	183
A.2	Maps and vector fields	186
A.3	BMO and Zygmund class	191
A.4	Compactness and modulus of continuity	196
A.5	Unique integrability	200

Appendix B. Visual extension	205
B.1 Naturality, continuity and quasiconformality	205
B.2 Representation theory	217
B.3 The visual distortion	221
B.4 Extending quasiconformal isotopies	226
B.5 Almost isometries	232
B.6 Points of differentiability	234
B.7 Example: stretching a geodesic.	237
Bibliography	241
Index	251
