Review article: "Characterization of workplace violence in healthcare workers at an emergency room in Bogotá, Colombia"

This is an interesting study about workplace violence against healthcare workers. The authors used a comprehensive questionnaire, which provided a complete overview of this theme.

The main study limitations were the reduced sample size and the sample composition (mainly students). Another issue is the use of non-validated instrument.

There are some typos in the text (altercations, questionnaire). It is not clear why the authors presented the search strategy and Appendix 1.

Table 1: sex proportions are wrong; exclude categories with 0 (0).
