Review of: "[Empirical Paper] Product Development of Digital Platform for Mental Health During Pregnancy Period: 'Get Well Mom'"

Fairuz Nazri Abd Rahman[1]

1 Universiti Kebangsaan Malaysia

Potential competing interests: I give advice on mental health issues in TheAsianParent application.

Overall, the language of this paper needs to be checked. There is a lack of focus on what the platform aims to help. Is it mental health problems, or to include physical problems or just to provide health related information?

Abstract

The psychological impact of COVID-19 can actually **attack** the mental health of pregnant women, such as anxiety and even depression.

Please change 'attack' to 'affect'

Lack of knowledge: what kind of knowledge?

Solutions: what kind of solutions?

The 'Get Well Mom' project aims to give **mental health services**

However, earlier you mentioned physical disorders as well. What is your focus?

Introduction

State the prevalence of anxiety and depression in pregnant women in your community with references. Include statistics during the COVID pandemic.

Check and use the referencing system of this journal.

Give the reference for Dignan's model.

Project Creation:

Usually in apps like these, the support system is not the husband, but other women users of the apps,

I do not think it is safe to use Doulas as the experts. Please include obstetricians, certified midwives, psychiatrists and psychologists.

Implementation

For competitor analysis, you can analyse TheAsianParent app.
