

Review of: "Essential Calculus, a Revolutionary Approach to Teaching Calculus"

Obadah Said Solaiman

Potential competing interests: No potential competing interests to declare.

From my point of view, i recommend the declination of publishing this work; as it doesn't present any new contribution to the knowledge.

Teaching calculus is a thing that is exists in most colleges in the world.

The proposed material and arrangement suggested by the author is a thing that can be pposed by any calculus instructor based on his knowledge.

I think that many basics were been ignored by the author.

No contribution in the paper from my point of view.
