

Instructions for contributors

Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Submission of manuscripts

Manuscripts for consideration by *Robotica* should be submitted electronically, using the Manuscript Central System, via <http://mc.manuscriptcentral.com/cup/robotica>. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other file types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office (robotica@cambridge.org) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However,

most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972);
C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

ROBOTICA

Volume **41** Part **2** February **2023**

SPECIAL SECTION ON RECENT ADVANCES IN FIELD AND SERVICE ROBOTICS

Special issue on recent advances in field and service robotics: handling harsh environments and cooperation Quang P. Ha, Hung M. La, Shuo Wang and Carlos Balaguer	411
Geometrically constrained path planning for robotic grasping with Differential Evolution and Fast Marching Square Javier Muñoz, Blanca López, Fernando Quevedo, Ramón Barber, Santiago Garrido and Luis Moreno	414
Modelling, simulation and experimental validation of wheel and arm locomotion based wall-climbing robot Ravindra Singh Bisht, Pushparaj Mani Pathak and Soraj Kumar Panigrahi	433
Picking out the Impurities: Attention-based Push-Grasping in Dense Clutter Ning Lu, Yinghao Cai, Tao Lu, Xiaoge Cao, Weiyan Guo and Shuo Wang	470
Robotic autonomous systems for earthmoving equipment operating in volatile conditions and teaming capacity: a survey Huynh A.D. Nguyen and Quang P. Ha	486
SAU-RFC hand: a novel self-adaptive underactuated robot hand with rigid-flexible coupling fingers Congjia Su, Rui Wang, Tao Lu and Shuo Wang	511

Regulation of cost function weighting matrices in control of WMR using MLP neural networks Moharam Habibnejad Korayem, Hamidreza Rezaei Adriani and Naeim Yousefi Lademakhi	530
A design of underwater soft gripper with water pressure sensing and enhanced stiffness Jingke Huang, Zhanhua Wang, Jianda Li and Zhijie Tang	548
Cooperative control strategy of wheel-legged robot based on attitude balance Yaojie Shen, Guangrong Chen, Zhaoyang Li, Ningze Wei, Huafeng Lu, Qingyu Meng and Sheng Guo	566
Grasp compliance achieved with a planar hand composed of multiple 3-joint fingers Shuguang Huang and Joseph M. Schimmels	587
Mechatronic design of dynamically decoupled manipulators based on the control performance improvement Yaodong Lu, Yannick Aoustin and Vigen Arakelian	609
Variational inference as iterative projection in a Bayesian Hilbert space with application to robotic state estimation Timothy D. Barfoot and Gabriele M. T. D'Eleuterio	632
Cooperative collision avoidance in multirobot systems using fuzzy rules and velocity obstacles Wenbing Tang, Yuan Zhou, Tianwei Zhang, Yang Liu, Jing Liu and Zuohua Ding	668
Autonomous robot navigation based on a hierarchical cognitive model Jianxian Cai, Fenfen Yan, Yan Shi, Mengying Zhang and Lili Guo	690
Configuration design and dimensional synthesis of an asymmetry 2R1T parallel mechanism Siyang Peng, Zhihong Cheng, Linxian Che, Song Cui and Zujin Jin	713
Faster navigation of semi-structured forest environments using multirotor UAVs Tzu-Jui Lin and Karl A. Stol	735
A hydraulic actuator for joint robots with higher torque to weight ratio Jiaqi Li, Dacheng Cong, Yu Yang and ZhiDong Yang	756
Time-frequency feature transform suite for deep learning-based gesture recognition using sEMG signals Xin Zhou, Jiancong Ye, Can Wang, Junpei Zhong and Xinyu Wu	775
A heuristic gait template planning and dynamic motion control for biped robots Lianqiang Han, Xuechao Chen, Zhangguo Yu, Zhifa Gao, Gao Huang, Jintao Zhang, Kenji Hashimoto and Qiang Huang	789

Robotica now accepts submissions via Manuscript Central
