

ROCK STRESS AND ITS MEASUREMENT

Bernard Amadei

*Professor, Department of Civil, Environmental and Architectural Engineering,
University of Colorado, Boulder, USA*

and

Ove Stephansson

*Professor, Department of Civil and Environmental Engineering,
Royal Institute of Technology, Stockholm, Sweden*

CHAPMAN & HALL

London · Weinheim · New York · Tokyo · Melbourne · Madras

CONTENTS

Preface	xiii
Acknowledgements	xv
1 Introduction	1
1.1 Stress at a point	1
1.2 Importance of rock stress	3
1.3 History	11
1.4 Classification of rock stresses	12
1.5 Content of the book	14
1.6 General observations	16
References	17
Conferences and workshops on <i>in situ</i> stresses	20
Major sessions in conferences	20
2 Estimating <i>in situ</i> stresses	23
2.1 Introduction	23
2.2 Variation of <i>in situ</i> stresses with depth	25
2.3 Vertical and horizontal stresses as principal stresses	30
2.4 Limits of <i>in situ</i> stresses with depth	32
2.4.1 Intact rock strength model	32
2.4.2 Effect of planes of weakness	34
2.4.3 Geophysical models	35
2.5 Effect of anisotropy	36
2.6 Effect of stratification	41
2.7 Effect of geological structures and heterogeneities	45
2.8 Effect of topography	51
2.8.1 Modeling the effect of topography	51
2.8.2 Symmetric ridges and valleys under gravity only	53
2.8.3 Asymmetric ridges and valleys under gravity only	59
2.8.4 Ridges and valleys under gravity and tectonic loading	60
2.8.5 Tensile stresses in valley bottoms	61
2.9 Tectonic and residual stresses	64
2.9.1 Tectonic stresses	64
2.9.2 Residual stresses	65
2.10 Effect of erosion, overconsolidation, uplift and glaciation	68
2.11 High horizontal stresses	69
2.12 Spherical shell models of stresses in the Earth	71
2.13 Effect of boundary conditions and time on <i>in situ</i> stress	74

2.14	Estimating stress orientation	76
2.14.1	Stress orientation from geological structures	76
2.14.2	Stress orientation from fault-plane solutions	79
2.14.3	Breakouts	81
2.15	Summary	82
	References	82
3	Methods of <i>in situ</i> stress measurement	95
3.1	Introduction	95
3.2	Hydraulic methods	97
3.2.1	Hydraulic fracturing	97
3.2.2	Sleeve fracturing	97
3.2.3	HTPF method	98
3.3	Relief methods	98
3.3.1	Surface relief methods	99
3.3.2	Borehole relief methods	99
3.3.3	Relief of large rock volumes	100
3.4	Jacking methods	101
3.5	Strain recovery methods	101
3.6	Borehole breakout method	102
3.7	Other methods	102
3.7.1	Fault-slip data analysis	102
3.7.2	Earthquake focal mechanisms	103
3.7.3	Indirect methods	103
3.7.4	Inclusions in time-dependent materials	104
3.7.5	Measurement of residual stresses	104
3.8	Rock volume in stress measurements	104
3.9	Accuracy and uncertainty in stress measurements	105
3.9.1	Natural (intrinsic, inherent) uncertainty	106
3.9.2	Measurement-related uncertainty	107
3.9.3	Data analysis-related uncertainty	108
3.9.4	Understanding and reducing uncertainties	110
3.9.5	Expected uncertainties	113
	References	116
4	Hydraulic methods	121
4.1	Introduction	121
4.2	Hydraulic fracturing	121
4.2.1	History	121
4.2.2	Techniques, equipment and procedures	130
4.2.3	Theory of hydraulic fracturing	141
4.2.4	Data analysis and interpretation	162
4.3	Sleeve fracturing	176
4.3.1	History	177
4.3.2	Techniques, equipment and procedures	178
4.3.3	Theory of sleeve fracturing	180

4.3.4 Recordings and interpretation	182
4.3.5 Data analysis and presentation	184
4.4 HTPF	186
4.4.1 History	187
4.4.2 Techniques, equipment and procedures	187
4.4.3 Theory	189
4.4.4 Recordings and interpretation	190
4.5 Integrated stress determination method	193
4.6 Technical information	193
References	194
5 Relief methods	201
5.1 Introduction	201
5.2 History	201
5.2.1 Surface relief methods	201
5.2.2 Borehole relief methods	203
5.2.3 Rock mass relief methods	210
5.3 Techniques, equipment and procedures	211
5.3.1 Basic steps in borehole overcoring	211
5.3.2 USBM gage	212
5.3.3 Cells of Bonnechere and Kanagawa	215
5.3.4 CSIR Doorstopper	216
5.3.5 CSIR triaxial strain cell	218
5.3.6 CSIRO HI cell	223
5.3.7 Biaxial testing	226
5.3.8 Borehole slotting	227
5.3.9 Stress relief by center hole	230
5.4 Theory	230
5.4.1 Assumptions in the analysis of overcoring tests	230
5.4.2 Analysis of USBM gage measurements	234
5.4.3 Analysis of CSIR Doorstopper measurements	244
5.4.4 Analysis of measurements with CSIR-type triaxial strain cells	246
5.4.5 Analysis of measurements with the CSIRO HI cell	249
5.4.6 Measurement of elastic properties on overcore samples	250
5.4.7 Analysis of surface relief by undercoring measurements	253
5.4.8 Analysis of borehole slotting measurements	254
5.5 Statistical analysis of overcoring measurements	256
5.5.1 Least squares analysis	256
5.5.2 Remarks	257
5.6 Effect of nonlinearity on overcoring results	258
5.7 Effect of anisotropy on overcoring results	260
5.7.1 Literature review	260
5.7.2 Laboratory and field studies	262
5.7.3 Numerical examples	265
5.8 Technical information	267
References	268

6 Jacking methods	277
6.1 Introduction	277
6.2 History	277
6.3 Techniques, equipment and procedures	279
6.4 Theory	284
6.5 Technical information	287
References	287
7 Strain recovery methods	289
7.1 Introduction	289
7.2 History	290
7.2.1 ASR method	290
7.2.2 DSCA method	292
7.3 Techniques, equipment and procedures	293
7.3.1 ASR	293
7.3.2 DSCA	294
7.4 Theory	295
7.4.1 ASR	295
7.4.2 DSCA	297
7.5 Data analysis and interpretation	298
7.5.1 ASR	298
7.5.2 DSCA	300
References	301
8 Borehole breakout method	303
8.1 Introduction	303
8.2 History	304
8.2.1 Observations	304
8.2.2 Theories of breakout formation	305
8.2.3 Laboratory studies	306
8.2.4 Recent developments	307
8.3 Techniques, equipment and procedures	308
8.3.1 Dipmeter	309
8.3.2 Televiwer	309
8.3.3 FMS	310
8.4 Theory	311
8.5 Data analysis and interpretation	317
8.5.1 Analysis of four-arm dipmeter logs	318
8.5.2 Analysis of borehole televiwer and FMS logs	321
References	323
9 Case studies and comparison between different methods	327
9.1 Stress measurements at the URL project	327
9.1.1 Geological setting	327
9.1.2 Stress measurements	329

9.1.3 Observations	334
9.1.4 Summary	339
9.2 Comparison between different overcoring techniques	339
9.3 Comparison between hydraulic fracturing and overcoring techniques	341
9.4 Comparison between hydraulic methods	346
9.4.1 Hydraulic fracturing and HTPF methods	346
9.4.2 Hydraulic fracturing, sleeve fracturing and the HTPF method	351
9.4.3 Cyclic hydraulic testing	352
9.5 Comparison between hydraulic fracturing and borehole breakout methods	353
9.5.1 The Auburn Geothermal Well, New York	354
9.5.2 Hanford Test Site, Washington	355
9.5.3 Cajon Pass scientific drill site, California	356
References	358
10 Monitoring of stress change	361
10.1 Introduction	361
10.2 Techniques and applications	364
10.2.1 Deformation gages	365
10.2.2 Strain cells	367
10.2.3 Stiff cylindrical inclusions	367
10.2.4 Solid and hollow deformable inclusions	373
10.2.5 Flat jacks and hydraulic borehole pressure cells	375
10.3 Technical information	380
References	381
11 The state of stress in the Earth's crust: from local measurements to the World Stress Map	387
11.1 The World Stress Map	387
11.1.1 The WSM database	387
11.1.2 Determination of stress regimes and global stress patterns	394
11.1.3 Brief summary of stress patterns in continents	397
11.2 Effect of scale on <i>in situ</i> stresses: fact or fiction?	406
11.2.1 Effect of scale on stress	408
11.2.2 Effect of scale on stress measurements	410
11.2.3 Effect of scale on rock properties involved in the analysis of stress measurements	413
References	415
12 Using stresses in rock engineering, geology and geophysics	419
12.1 Introduction	419
12.2 Stresses in civil rock engineering	420
12.2.1 Role of <i>in situ</i> stresses in the behavior of underground excavations	421
12.2.2 Importance of <i>in situ</i> stresses for pressure tunnels and shafts	429
12.2.3 Importance of <i>in situ</i> stresses for underground storage of fluids	433
12.2.4 Role of <i>in situ</i> stresses in the behavior of surface excavations	434
12.3 Stresses in mining engineering	436

12.4 Stresses in geology and geophysics	441
12.4.1 Emplacement of igneous intrusions	441
12.4.2 Salt diapirs	443
12.4.3 Dome structures	444
12.4.4 Single layer buckling	447
12.4.5 Neotectonic or postglacial faulting	449
12.4.6 Fault slip	450
12.4.7 Intraplate stresses in the upper Earth's crust	452
References	456
Appendix A Analysis of stress	461
A.1 Cauchy stress principle	461
A.2 State of stress at a point	461
A.3 State of stress on an inclined plane	462
A.4 Force and moment equilibrium	463
A.5 Stress transformation law	463
A.6 Normal and shear stresses on an inclined plane	465
A.7 Principal stresses	465
Appendix B Displacements, stresses and strains around a circular hole: anisotropic solution	467
B.1 General expressions for displacement components	467
B.2 Expressions for displacement components when hole axis z is perpendicular to a plane of elastic symmetry	468
B.3 Radial displacement induced by drilling a hole in an infinite anisotropic medium	468
B.4 Radial displacement induced by application of <i>in situ</i> stress field	470
B.5 Total radial displacement around the borehole contour	471
B.6 General expressions for stress components	473
B.7 Stresses around a circular hole drilled in an infinite anisotropic medium under a 3D state of stress acting at infinity	473
B.8 Strain components	476
