

Joel L. Horowitz

# Semiparametric and Nonparametric Methods in Econometrics

Springer

# Contents

<b>1</b>	<b>Introduction . . . . .</b>	<b>1</b>
1.1	The Goals of This Book . . . . .	1
1.2	Dimension Reduction . . . . .	3
1.3	Are Semiparametric and Nonparametric Methods Really Different from Parametric Ones? . . . . .	6
<b>2</b>	<b>Single-Index Models . . . . .</b>	<b>7</b>
2.1	Definition of a Single-Index Model of a Conditional Mean Function . . . . .	7
2.2	Multiple-Index Models . . . . .	10
2.3	Identification of Single-Index Models . . . . .	12
2.3.1	Conditions for Identification of $\beta$ and $G$ . . . . .	12
2.3.2	Identification Analysis When $X$ Is Discrete . . . . .	15
2.4	Estimating $G$ in a Single-Index Model . . . . .	17
2.5	Optimization Estimators of $\beta$ . . . . .	19
2.5.1	Nonlinear Least Squares . . . . .	20
2.5.2	Choosing the Weight Function . . . . .	25
2.5.3	Semiparametric Maximum-Likelihood Estimation of Binary-Response Models . . . . .	27
2.5.4	Semiparametric Maximum-Likelihood Estimation of Other Single-Index Models . . . . .	29
2.5.5	Semiparametric Rank Estimators . . . . .	29
2.6	Direct Semiparametric Estimators . . . . .	30
2.6.1	Average-Derivative Estimators . . . . .	31
2.6.2	An Improved Average-Derivative Estimator . . . . .	35
2.6.3	Direct Estimation with Discrete Covariates . . . . .	37
2.6.4	One-Step Asymptotically Efficient Estimators . . . . .	42
2.7	Bandwidth Selection . . . . .	44
2.8	An Empirical Example . . . . .	46
2.9	Single-Index Models of Conditional Quantile Functions . . . . .	48

<b>3 Nonparametric Additive Models and Semiparametric Partially Linear Models . . . . .</b>	<b>53</b>
3.1 Nonparametric Additive Models with Identity Link Functions . . . . .	55
3.1.1 Marginal Integration . . . . .	55
3.1.2 Backfitting . . . . .	63
3.1.3 Two-Step, Oracle-Efficient Estimation . . . . .	64
3.2 Estimation with a Nonidentity Link Function . . . . .	70
3.2.1 Estimation . . . . .	71
3.2.2 Bandwidth Selection . . . . .	75
3.3 Estimation with an Unknown Link Function . . . . .	77
3.4 Estimation of a Conditional Quantile Function . . . . .	81
3.5 An Empirical Example . . . . .	84
3.6 The Partially Linear Model . . . . .	85
3.6.1 Identification . . . . .	85
3.6.2 Estimation of $\beta$ . . . . .	86
3.6.3 Partially Linear Models of Conditional Quantiles . . . . .	90
3.6.4 Empirical Applications . . . . .	91
<b>4 Binary-Response Models . . . . .</b>	<b>95</b>
4.1 Random-Coefficients Models . . . . .	95
4.2 Identification . . . . .	96
4.2.1 Identification Analysis When $X$ Has Bounded Support . . . . .	100
4.2.2 Identification When $X$ Is Discrete . . . . .	101
4.3 Estimation . . . . .	104
4.3.1 Estimating $P(Y = 1 X = x)$ . . . . .	104
4.3.2 Estimating $\beta$ : The Maximum-Score Estimator . . . . .	105
4.3.3 Estimating $\beta$ : The Smoothed Maximum-Score Estimator . . . . .	108
4.4 Extensions of the Maximum-Score and Smoothed Maximum-Score Estimators . . . . .	119
4.4.1 Choice-Based Samples . . . . .	119
4.4.2 Panel Data . . . . .	123
4.4.3 Ordered-Response Models . . . . .	128
4.5 Other Estimators for Heteroskedastic Binary-Response Models . . . . .	131
4.6 An Empirical Example . . . . .	132
<b>5 Statistical Inverse Problems . . . . .</b>	<b>135</b>
5.1 Deconvolution in a Model of Measurement Error . . . . .	137
5.1.1 Rate of Convergence of the Density Estimator . . . . .	138
5.1.2 Why Deconvolution Estimators Converge Slowly . . . . .	141
5.1.3 Asymptotic Normality of the Density Estimator . . . . .	143
5.1.4 A Monte Carlo Experiment . . . . .	144
5.2 Models for Panel Data . . . . .	145

5.2.1	Estimating $f_U$ and $f_\varepsilon$ . . . . .	146
5.2.2	Large Sample Properties of $f_{n\varepsilon}$ and $f_{nU}$ . . . . .	148
5.2.3	Estimating First-Passage Times . . . . .	151
5.2.4	Bias Reduction . . . . .	152
5.2.5	Monte Carlo Experiments . . . . .	154
5.3	Nonparametric Instrumental-Variables Estimation . . . . .	156
5.3.1	Regularization Methods . . . . .	164
5.4	Nonparametric Instrumental-Variables Estimation When $T$ Is Unknown . . . . .	171
5.4.1	Estimation by Tikhonov Regularization When $T$ Is Unknown . . . . .	171
5.4.2	Estimation by Series Truncation When $T$ Is Unknown . . . . .	178
5.5	Other Approaches to Nonparametric Instrumental-Variables Estimation . . . . .	185
5.5.1	Nonparametric Quantile IV . . . . .	185
5.5.2	Control Functions . . . . .	186
5.6	An Empirical Example . . . . .	187
6	<b>Transformation Models</b> . . . . .	189
6.1	Estimation with Parametric $T$ and Nonparametric $F$ . . . . .	190
6.1.1	Choosing the Instruments . . . . .	193
6.1.2	The Box–Cox Regression Model . . . . .	194
6.1.3	The Weibull Hazard Model with Unobserved Heterogeneity . . . . .	196
6.2	Estimation with Nonparametric $T$ and Parametric $F$ . . . . .	201
6.2.1	The Proportional Hazards Model . . . . .	201
6.2.2	The Proportional Hazards Model with Unobserved Heterogeneity . . . . .	204
6.2.3	The Case of Discrete Observations of $Y$ . . . . .	208
6.2.4	Estimating $\lambda_0$ . . . . .	209
6.2.5	Other Models in Which $F$ Is Known . . . . .	213
6.3	Estimation When Both $T$ and $F$ Are Nonparametric . . . . .	215
6.3.1	Derivation of Horowitz’s Estimators of $T$ and $F$ . . . . .	216
6.3.2	Asymptotic Properties of $T_n$ and $F_n$ . . . . .	219
6.3.3	Chen’s Estimator of $T$ . . . . .	221
6.3.4	The Proportional Hazards Model with Unobserved Heterogeneity . . . . .	223
6.4	Predicting $Y$ Conditional on $X$ . . . . .	230
6.5	An Empirical Example . . . . .	230
<b>Appendix:</b>	<b>Nonparametric Density Estimation and Nonparametric Regression</b> . . . . .	233
A.1	Nonparametric Density Estimation . . . . .	233
A.1.1	Density Estimation When $X$ Is Multidimensional . . . . .	237
A.1.2	Estimating Derivatives of a Density . . . . .	239

A.2	Nonparametric Mean Regression . . . . .	240
A.2.1	The Nadaraya–Watson Kernel Estimator . . . . .	240
A.2.2	Local-Linear Mean Regression . . . . .	242
A.2.3	Series Estimation of a Conditional Mean Function . . . . .	245
A.3	Nonparametric Quantile Regression . . . . .	250
A.3.1	A Kernel-Type Estimator of $q_\alpha(x)$ . . . . .	250
A.3.2	Local-Linear Estimation of $q_\alpha(x)$ . . . . .	251
A.3.3	Series Estimation of $q_\alpha(x)$ . . . . .	253
