Chapter 1: Introduction to Risk Management and Derivatives 1

1.1 Introduction 1
1.2 Types of risks facing shipping companies 3
1.3 The risk-management process 6
1.3.1 Why should firms manage risks? 7
1.4 Introduction to derivatives: contracts and applications 8
1.4.1 Forward contracts 9
1.4.2 Futures contracts 10
1.4.3 Swaps 12
1.4.4 Options 12
1.5 Applications and uses of financial derivatives 13
1.5.1 Risk management 13
1.5.2 Speculators 14
1.5.3 Arbitrageurs 14
1.5.4 The price discovery role of derivatives markets 15
1.5.5 Hedging and basis risk 16
1.5.6 Theoretical models of futures prices: the cost-of-carry model 18
1.6 The organisation of this book 20
Appendix 1.A: derivation of minimum variance hedge ratio 23

Chapter 2: Introduction to Shipping Markets 24

2.1 Introduction 24
2.2 The world shipping industry 24
2.3 Market segmentation in the shipping industry 28
2.3.1 The container shipping market 30
2.3.2 The dry-bulk market 31
2.3.3 The tanker market 34

2.4 Shipping freight contracts 35
2.4.1 Voyage charter contracts 37
2.4.2 Contracts of affreightment 39
2.4.3 Trip-charter contracts 40
2.4.4 Time-charter contracts 41
2.4.5 Bare-boat or demise charter contracts 41
2.5 Definition and structure of costs in shipping 42
2.5.1 Capital costs 42
2.5.2 Operating costs 43
2.5.3 Voyage costs 43
2.5.4 Cargo-handling costs 44
2.6 Spot freight-fate formation 44
2.7 Time-charter rate formation 48
2.7.1 Time-charter equivalent of spot rates (TCE) 51
2.8 Seasonal behaviour of freight rates 52
2.9 The market for ships 55
2.9.1 Factors determining ship prices 55
2.9.2 The newbuilding market 56
2.9.3 The second-hand market 58
2.9.4 The scrap or demolition market 60
2.10 Summary and conclusions 63

Chapter 3: Statistical Tools for Risk Analysis and Modelling 65

3.1 Introduction 65
3.2 Data sources and data-collection methods 65
3.3 Descriptive statistics and moments of a variable 67
3.3.1 Measures of central tendency (location) 67
3.3.2 Measures of dispersion 69
3.3.3 The range 69
3.3.4 Variance and standard deviation 70
3.3.5 Coefficient of skewness 73
3.3.6 Coefficient of kurtosis 74
3.3.7 Coefficient of variation 75
3.3.8 Covariance and correlation 77
3.3.9 Comparison of risk across different vessel size and contracts 78
3.4 Time-varying volatility models 80
3.4.1 Rolling-window or moving-average variance 82
3.4.2 Exponentially weighted average variance (EWAV) 83
3.4.3 Realised volatility models 84

3.5 ARCH and GARCH models 85
3.5.1 The theory of ARCH models 85
3.5.1.1 GARCH models 86
3.5.2 Asymmetric GARCH models 88
3.5.3 GJR threshold GARCH model 90
3.5.4 Exponential GARCH model 90
3.5.5 Markov regime-switching GARCH models 94
3.5.6 The term structure of forward-curve and freight-rate volatility 97
3.5.7 Stochastic volatility models 99
3.5.8 Multivariate GARCH models 100
3.6 Forecasting volatility 102
3.6.1 Historical volatility forecast 102
3.6.2 Exponentially weighted average volatility (RiskMetrics) 103
3.6.3 GARCH models 103
3.7 Summary and conclusions 106

Chapter 4: Freight Market Information 107

4.1 Introduction 107
4.2 Baltic Exchange freight-market information 108
4.2.1 Baltic Capesize Index (BCI) 108
4.2.2 Baltic Panamax Index (BPI) 110
4.2.3 Baltic Supramax Index (BSI) 111
4.2.4 Baltic Handysize Index (BHSI) 111
4.2.5 Baltic Dry Index (BDI) 112
4.2.6 Baltic Clean Tanker Index (BCTI) 113
4.2.7 Baltic Dirty Tanker Index (BDTI) 115
4.2.8 Other indices 117
4.3 Calculation of the Baltic Indices and the role of the panellists 118
4.3.1 Route selection and route changes 120
4.3.2 Calculation of the Baltic Indices 120
4.4 The freight-futures market – historical developments 121
4.5 Summary and conclusions 123

Chapter 5: Forward Freight Agreements 125

5.1 Introduction 125
5.2 What is a forward freight agreement (FFA)? 125
5.2.1 Volume by sector and trade 127

5.3 How are forward freight agreements traded? 131
5.3.1 Trading FFAs in the OTC market 133
5.3.2 Contract documentation in the OTC market 134
5.3.2.1 The FFABA contract 135
5.3.2.2 ISDA® Master Agreement and Schedule 137
5.3.3 Credit risk and clearing 137
5.3.3.1 How clearing houses operate 138
5.3.3.2 Margining and marking to market 141
5.3.3.3 A marking-to-market example 143
5.3.4 Trading via a 'hybrid' exchange 145
5.4 Hedging using forward freight agreements 147
5.4.1 Hedging trip-charter freight-rate risk 148
5.4.2 Hedging using voyage FFAs 149
5.4.3 Time-charter hedge 152
5.4.4 Tanker hedge 157
5.4.5 Hedge-ratio calculation for tanker FFAs 157
5.5 Issues to consider when using FFAs for hedging 158
5.5.1 Settlement risk 158
5.5.2 Basis risk 160
5.6 Uses of forward freight agreements 164
5.7 Price discovery and forward curves 166
5.7.1 Baltic Forward Assessments (BFA) 169
5.8 Summary and conclusions 173
Appendix 5.A: FFABA 2007© Forward Freight Agreement contract 174

Chapter 6: Technical Analysis and Freight Trading Strategies 181

6.1 Introduction 181
6.2 Technical analysis 181
6.2.1 Chart analysis 182
6.3 Technical trading rules 186
6.4 Moving averages (MA) 186
6.4.1 Moving average crossover trading rule 186
6.4.2 Stochastic oscillators 189
6.5 Filter rules 192
6.5.1 Moving average envelopes 193
6.5.2 Bollinger Bands 194
6.6 The momentum trading model 197
6.7 Spread trading in FFA markets 199
6.7.1 Tanker spread trading 201
6.7.2 Dry-bulk spread trading 203

6.8 Time-charter and implied forward rates 207
6.8.1 The relative value trading rule 211
6.9 Technical trading rules and shipping investment 211
6.10 Summary and conclusions 215

Chapter 7: Options on Freight Rates 217

7.1 Introduction 217
7.2 A primer on options 217
7.3 Properties of option prices 222
7.3.1 Boundary conditions for European call prices 222
7.3.2 Boundary conditions for European put prices 224
7.3.3 Put-call parity 224
7.3.4 Factors affecting the value of call and put options 225
7.4 Practicalities of trading options in the freight market 226
7.5 Risk-management strategies using options 227
7.5.1 An example of hedging using options 231
7.5.2 Hedging using a collar 232
7.5.2.1 Constructing a zero-cost collar in the dry-bulk market 234
7.6 Option-trading strategies 236
7.6.1 Bull spreads 236
7.6.2 Bear spreads 240
7.6.3 Ratio spreads 241
7.6.4 Box spread 243
7.6.5 Straddle combinations 244
7.6.6 Strangle combinations 245
7.6.7 Strips and straps 247
7.6.8 Butterfly spreads 248
7.7 Summary and conclusions 249
Appendix 7.A: FFABA 2007© Freight Options Contract 250

Chapter 8: Pricing and Risk Management of Option Positions 258

8.1 Introduction 258
8.2 Pricing freight options 258
8.2.1 Which approach is better for pricing freight options? 259
8.2.2 The Black-Scholes-Merton (BSM) model (1973) 261
8.2.3 The Black Model (1976) 263

8.2.4 The Turnbull and Wakeman Approximation (1991) 264
8.2.5 Lévy (1997) and Haug et al. (2003) Discrete Asian Approximation 265
8.2.6 Curran's Approximation 266
8.2.7 Applications for freight markets 267
8.2.8 An option-pricing example 269
8.3 Asian options with volatility term structure 271
8.4 Implied volatility 273
8.5 Pricing Asian options using Monte Carlo simulation 276
8.6 Risk management of option positions 281
8.7 Hedging a short-call position: an example 282
8.8 Option-price sensitivities: 'Greeks' 283
8.9 Delta (Δ) 284
8.9.1 Delta hedging 286
8.9.2 Delta hedging of Asian options 290
8.10 Gamma (Γ) 292
8.10.1 Gamma-neutral strategies 294
8.11 Theta (Θ) 295
8.11.1 The relationship between theta, delta and gamma 297
8.12 Vega (Λ) 298
8.13 Rho (P) 299
8.13.1 Interpretation of Greek parameters: reading the Greeks 300
8.14 Dynamic hedging in practice 300
8.14.1 Greeks and trading strategies 302
8.15 Summary and conclusions 302

Chapter 9: Value-at-Risk in Shipping and Freight Risk Management 303

9.1 Introduction 303
9.2 Simple VaR estimation 305
9.2.1 VaR of multi-asset portfolios 310
9.3 VaR estimation methodologies 312
9.3.1 Parametric VaR estimation 312
9.3.1.1 The sample variance and covariance method 313
9.3.1.2 The exponential weighted average variance and RiskMetrics method 313

9.3.1.3 GARCH Models and VaR estimation 313
9.3.1.4 Monte Carlo simulation and VaR estimation 314
9.3.1.5 Recent advances in parametric VaR models 317
9.3.2 Nonparametric VaR estimation methods 319
9.3.2.1 Historical simulation 319
9.3.2.2 The bootstrap method of estimating VaR 321
9.3.2.3 The quantile regression method 322
9.4 VaR for non-linear instruments 322
9.4.1 Mapping VaR for options 323
9.4.2 Delta approximation 325
9.4.3 Delta-gamma approximation 325
9.5 Principal component analysis and VaR estimation 328
9.6 Backtesting and stresstesting of VaR models 333
9.7 Summary and conclusions 335
Appendix 9.A: Principal component analysis 336

Chapter 10: Bunker Risk Analysis and Risk Management 338

10.1 Introduction 338
10.2 The world bunker market 339
10.3 Bunker-price risk in shipping operations 341
10.4 Hedging bunker risk using OTC instruments 343
10.5 Hedging bunker prices using forward contracts 343
10.5.1 Long hedge using forward bunker contract 343
10.5.2 Short hedge using forward bunker contract 344
10.6 Bunker swap contracts 346
10.6.1 Plain vanilla bunker swap 347
10.7 Exotic bunker swaps 350
10.7.1 Differential swap 350
10.7.2 Extendable swap 351
10.7.3 Forward bunker swap 352
10.7.4 Participation swap 353
10.7.5 Double-up swap 354
10.7.6 Variable volume swap or swing 354
10.8 Hedging bunker price using options 354
10.8.1 Bunker caps and floors 355
10.8.2 Collars or cylinder options 356
10.9 Summary and conclusions 362

Chapter 11: Financial and Interest Rate Risk in Shipping 363

11.1 Introduction 363
11.2 Reference rates and international financial markets 364
11.3 Term loans 366
11.3.1 A fixed-rate loan example 367
11.3.2 Floating-rate loans examples 369
11.4 Hedging interest-rate risk 371
11.5 Forward-rate agreements 371
11.6 Interest-rate futures 374
11.6.1 Eurodollar futures contracts 374
11.7 Interest-rate swaps 375
11.7.1 Pricing and unwinding of interest-rate swaps 378
11.8 Interest-rate options 381
11.8.1 Interest-rate caplets and floorlets 381
11.8.1.1 An example of a caplet option hedge 382
11.8.2 Interest-rate caps and floors 384
11.8.3 Interest-rate collars 388
11.8.3.1 An example of a zero-cost collar 389
11.9 Pricing caps and floors using Black's model 391
11.10 Forward swaps and swaptions 395
11.11 Hedging using currency swaps 396
11.11.1 Pricing currency swaps 397
11.12 Summary and conclusions 398

Chapter 12: Credit Risk Measurement and Management in Shipping 399

12.1 Introduction 399
12.2 What is credit risk? 399
12.3 What is the source of credit risk in shipping? 400
12.3.1 Qualitative vs. quantitative credit-risk analysis 401
12.4 Credit ratings and rating agencies 402
12.4.1 Shipping high-yield bond issues 404
12.5 Estimating probability of default 407
12.5.1 Extracting default probabilities from traded bonds 407
12.5.2 Historical default probabilities 409

12.5.3 Estimating default probabilities using Merton's model 411
12.6 Credit-risk management and credit derivatives 414
12.6.1 Collateralisation 415
12.6.2 Downgrade triggers 415
12.6.3 Contract design and netting 416
12.6.4 Diversification 416
12.6.5 Credit derivatives 417
12.6.5.1 Credit default swap (CDS) 418
12.6.5.2 Total return swap (TRS) 420
12.6.5.3 Credit spread options (CSO) 422
12.7 Summary and conclusions 424

Chapter 13: Ship Price Risk and Risk Management 425

13.1 Introduction 425
13.2 Ship-price formation 426
13.3 Comparison of ship-price risk across sectors 428
13.3.1 Dynamics of volatility of ship prices 430
13.4 Ship-price risk management 432
13.4.1 Portfolio theory and diversification 432
13.4.2 Derivatives on ship values 439
13.4.3 Forward Ship Value Agreements (FoSVA) 439
13.4.4 Forward curves for ship prices 444
13.4.5 Baltic Demolition Index (BDA) 446
13.5 Summary and conclusions 450

Chapter 14: Real Options and Optionalities in Shipping 451

14.1 Introduction 451
14.2 Financial versus real options 451
14.3 Conventional NPV versus real option valuation 452
14.3.1 Valuation of a shipping project 454
14.4 Real options in shipping 455
14.4.1 Option to abandon/exit 455
14.4.2 Option to expand 457
14.4.3 Option to contract 459
14.4.4 Option to switch 460
14.4.5 Option to lay-up 461
14.4.6 Option to delay (wait) 462
14.5 Other options in shipping 463
14.5.1 Option to extend a period time-charter contract 463

14.5.2 Option on newbuilding orders 465
14.5.3 Purchase option on a time-charter contract 467
14.5.4 Option on writing-off part of a debt 470
14.6 Pricing real options using simulation 472
14.6.1 Sensitivity analysis and interval estimates 474
14.7 Summary and conclusions 475
Appendix 14.A: The binomial option pricing model (BOPM) 477
