Foreword xiii
Preface xv
Authors xix

Chapter 1 Mathematical Modeling 1
1.1 Introduction 1
1.1.1 Importance of Models 1
1.2 Derivation of a Mathematical Model 4
Exercises 8
1.3 Difference Equations 10
1.3.1 Recursive Solutions 11
Exercises 12
1.4 First Look at Discrete-Time Systems 13
1.4.1 Inherently Discrete-Time Systems 17
Exercises 20
1.5 Case Study: Population Dynamics (Single Species) 21
Exercises 28

Chapter 2 Continuous-Time Systems 31
2.1 Introduction 31
2.2 First-Order Systems 31
2.2.1 Step Response of First-Order Systems 32
Exercises 36
2.3 Second-Order Systems 38
2.3.1 Conversion of Two First-Order Equations to a Second-Order Model 43
Exercises 46
2.4 Simulation Diagrams 47
2.4.1 Systems of Equations 53
Exercises 55
2.5 Higher-Order Systems 56
Exercises 58
2.6 State Variables 59
2.6.1 Conversion from Linear State Variable Form to Single Input–Single Output Form 64
2.6.2 General Solution of the State Equations 65
Exercises 65
2.7 Nonlinear Systems 68
2.7.1 Friction 70
2.7.2 Dead Zone and Saturation 72
2.7.3 Backlash 73
2.7.4 Hysteresis 73
2.7.5 Quantization 77
2.7.6 Sustained Oscillations and Limit Cycles 78

Exercises ... 82
2.8 Case Study: Submarine Depth Control System ... 85
Exercises ... 89

Chapter 3 Elementary Numerical Integration ... 91
3.1 Introduction ... 91
3.2 Discrete-Time System Approximation of a Continuous-Time Integrator ... 92
Exercises ... 94
3.3 Euler Integration ... 96
3.3.1 Backward (Implicit) Euler Integration ... 99
Exercises ... 101
3.4 Trapezoidal Integration ... 102
Exercises ... 106
3.5 Numerical Integration of First-Order and Higher Continuous-Time Systems ... 107
3.5.1 Discrete-Time System Models from Simulation Diagrams ... 107
3.5.2 Nonlinear First-Order Systems ... 111
3.5.3 Discrete-Time State Equations ... 114
3.5.4 Discrete-Time State System Matrices ... 118
Exercises ... 119
3.6 Improvements to Euler Integration ... 122
3.6.1 Improved Euler Method ... 122
3.6.2 Modified Euler Integration ... 125
Exercises ... 135
3.7 Case Study: Vertical Ascent of a Diver ... 138
3.7.1 Maximum Cable Force for Safe Ascent ... 144
3.7.1.1 Trial and Error ... 144
3.7.1.2 Analytical Solution ... 145
3.7.2 Diver Ascent with Decompression Stops ... 145
Exercises ... 147

Chapter 4 Linear Systems Analysis ... 151
4.1 Introduction ... 151
4.2 Laplace Transform ... 151
4.2.1 Properties of the Laplace Transform ... 153
4.2.2 Inverse Laplace Transform ... 159
4.2.3 Laplace Transform of the System Response ... 160
4.2.4 Partial Fraction Expansion ... 161
Exercises ... 167
4.3 Transfer Function ... 168
4.3.1 Impulse Function ... 168
4.3.2 Relationship between Unit Step Function and Unit Impulse Function ... 169
4.3.3 Impulse Response ... 171
4.3.4 Relationship between Impulse Response and Transfer Function ... 175
4.3.5 Systems with Multiple Inputs and Outputs ... 178
4.3.6 Transformation from State Variable Model to Transfer Function ... 184
Exercises ... 187

4.4 Stability of Linear Time Invariant Continuous-Time Systems 189
4.4.1 Characteristic Polynomial 190
4.4.2 Feedback Control System 194
Exercises 198
4.5 Frequency Response of LTI Continuous-Time Systems 200
4.5.1 Stability of Linear Feedback Control Systems Based on Frequency Response 210
Exercises 213
4.6 z-Transform 215
4.6.1 Discrete-Time Impulse Function 221
4.6.2 Inverse z-Transform 225
4.6.3 Partial Fraction Expansion 226
Exercises 233
4.7 z-Domain Transfer Function 234
4.7.1 Nonzero Initial Conditions 236
4.7.2 Approximating Continuous-Time System Transfer Functions 238
4.7.3 Simulation Diagrams and State Variables 244
4.7.4 Solution of Linear Discrete-Time State Equations 248
4.7.5 Weighting Sequence (Impulse Response Function) 253
Exercises 257
4.8 Stability of LTI Discrete-Time Systems 259
4.8.1 Complex Poles of $H(z)$ 263
Exercises 269
4.9 Frequency Response of Discrete-Time Systems 272
4.9.1 Steady-State Sinusoidal Response 272
4.9.2 Properties of the Discrete-Time Frequency Response Function 274
4.9.3 Sampling Theorem 278
4.9.4 Digital Filters 284
Exercises 289
4.10 Control System Toolbox 292
4.10.1 Transfer Function Models 293
4.10.2 State-Space Models 293
4.10.3 State-Space/Transfer Function Conversion 295
4.10.4 System Interconnections 298
4.10.5 System Response 299
4.10.6 Continuous-/Discrete-Time System Conversion 302
4.10.7 Frequency Response 303
4.10.8 Root Locus 305
Exercises 309
4.11 Case Study: Longitudinal Control of an Aircraft 312
4.11.1 Digital Simulation of Aircraft Longitudinal Dynamics 325
4.11.2 Simulation of State Variable Model 327
Exercises 329
4.12 Case Study: Notch Filter for Electrocardiograph Waveform 330
4.12.1 Multinotch Filters 331
Exercises 338

Chapter 5 Simulink® 341
5.1 Introduction 341
5.2 Building a Simulink® Model 341

5.2.1 Simulink® Library 342
5.2.2 Running a Simulink® Model 345
Exercises 347
5.3 Simulation of Linear Systems 349
5.3.1 Transfer Fcn Block 350
5.3.2 State-Space Block 353
Exercises 362
5.4 Algebraic Loops 363
5.4.1 Eliminating Algebraic Loops 364
5.4.2 Algebraic Equations 367
Exercises 369
5.5 More Simulink® Blocks 371
5.5.1 Discontinuities 377
5.5.2 Friction 377
5.5.3 Dead Zone and Saturation 377
5.5.4 Backlash 379
5.5.5 Hysteresis 380
5.5.6 Quantization 381
Exercises 382
5.6 Subsystems 385
5.6.1 PHYSBE 386
5.6.2 Car-Following Subsystem 386
5.6.3 Subsystem Using Fcn Blocks 389
Exercises 392
5.7 Discrete-Time Systems 393
5.7.1 Simulation of an Inherently Discrete-Time System 394
5.7.2 Discrete-Time Integrator 397
5.7.3 Centralized Integration 398
5.7.4 Digital Filters 402
5.7.5 Discrete-Time Transfer Function 404
Exercises 408
5.8 MATLAB® and Simulink® Interface 411
Exercises 417
5.9 Hybrid Systems: Continuous- and Discrete-Time Components 420
Exercises 423
5.10 Monte Carlo Simulation 424
5.10.1 Monte Carlo Simulation Requiring Solution of a Mathematical Model 428
Exercises 434
5.11 Case Study: Pilot Ejection 437
Exercises 441
5.12 Case Study: Kalman Filtering 442
5.12.1 Continuous-Time Kalman Filter 442
5.12.2 Steady-State Kalman Filter 443
5.12.3 Discrete-Time Kalman Filter 443
5.12.4 Simulink® Simulations 444
5.12.5 Summary 455
Exercise 456

Chapter 6 Intermediate Numerical Integration 457
6.1 Introduction 457
6.2 Runge–Kutta (RK) (One-Step Methods) 457
6.2.1 Taylor Series Method 458
6.2.2 Second-Order Runge–Kutta Method 459
6.2.3 Truncation Errors 461
6.2.4 High-Order Runge–Kutta Methods 466
6.2.5 Linear Systems: Approximate Solutions Using RK Integration 467
6.2.6 Continuous-Time Models with Polynomial Solutions 469
6.2.7 Higher-Order Systems 471
Exercises 478
6.3 Adaptive Techniques 481
6.3.1 Repeated RK with Interval Halving 481
6.3.2 Constant Step Size ($T = 1$ min) 485
6.3.3 Adaptive Step Size (Initial $T = 1$ min) 485
6.3.4 RK–Fehlberg 486
Exercises 490
6.4 Multistep Methods 492
6.4.1 Explicit Methods 493
6.4.2 Implicit Methods 495
6.4.3 Predictor–Corrector Methods 498
Exercises 502
6.5 Stiff Systems 503
6.5.1 Stiffness Property in First-Order System 504
6.5.2 Stiff Second-Order System 506
6.5.3 Approximating Stiff Systems with Lower-Order Nonstiff System Models 509
Exercises 522
6.6 Lumped Parameter Approximation of Distributed Parameter Systems 526
6.6.1 Nonlinear Distributed Parameter System 531
Exercises 534
6.7 Systems with Discontinuities 535
6.7.1 Physical Properties and Constant Forces Acting on the Pendulum BOB 543
Exercises 549
6.8 Case Study: Spread of an Epidemic 552
Exercises 559

Chapter 7 Simulation Tools 561
7.1 Introduction 561
7.2 Steady-State Solver 562
7.2.1 Trim Function 564
7.2.2 Equilibrium Point for a Nonautonomous System 565
Exercises 574
7.3 Optimization of Simulink® Models 576
7.3.1 Gradient Vector 585
7.3.2 Optimizing Multiparameter Objective Functions Requiring Simulink® Models 587

7.3.3 Parameter Identification 590
7.3.4 Example of a Simple Gradient Search 591
7.3.5 Optimization of Simulink® Discrete-Time System Models 599
Exercises 605
7.4 Linearization 610
7.4.1 Deviation Variables 611
7.4.2 Linearization of Nonlinear Systems in State Variable Form 619
7.4.3 Linmod Function 623
7.4.4 Multiple Linearized Models for a Single System 627
Exercises 633
7.5 Adding Blocks to the Simulink® Library Browser 637
7.5.1 Introduction 637
7.5.2 Summary 645
Exercise 645
7.6 Simulation Acceleration 645
7.6.1 Introduction 645
7.6.2 Profiler 647
7.6.3 Summary 647
Exercise 648

Chapter 8 Advanced Numerical Integration 649
8.1 Introduction 649
8.2 Dynamic Errors (Characteristic Roots, Transfer Function) 649
8.2.1 Discrete-Time Systems and the Equivalent Continuous-Time Systems 650
8.2.2 Characteristic Root Errors 653
8.2.3 Transfer Function Errors 664
8.2.4 Asymptotic Formulas for Multistep Integration Methods 669
8.2.5 Simulation of Linear System with Transfer Function $H(s)$ 672
Exercises 677
8.3 Stability of Numerical Integrators 680
8.3.1 Adams–Bashforth Numerical Integrators 680
8.3.2 Implicit Integrators 687
8.3.3 Runga–Kutta (RK) Integration 692
Exercises 700
8.4 Multirate Integration 702
8.4.1 Procedure for Updating Slow and Fast States: Master/Slave = RK-4/RK-4 706
8.4.2 Selection of Step Size Based on Stability 707
8.4.3 Selection of Step Size Based on Dynamic Accuracy 708
8.4.4 Analytical Solution for State Variables 712
8.4.5 Multirate Integration of Aircraft Pitch Control System 714
8.4.6 Nonlinear Dual Speed Second-Order System 717
8.4.7 Multirate Simulation of Two-Tank System 723
8.4.8 Simulation Trade-Offs with Multirate Integration 725
Exercises 728
8.5 Real-Time Simulation 730
8.5.1 Numerical Integration Methods Compatible with Real-Time Operation 733
8.5.2 RK-1 (Explicit Euler) 734

8.5.3 RK-2 (Improved Euler) 734
8.5.4 RK-2 (Modified Euler) 735
8.5.5 RK-3 (Real-Time Incompatible) 735
8.5.6 RK-3 (Real-Time Compatible) 736
8.5.7 RK-4 (Real-Time Incompatible) 736
8.5.8 Multistep Integration Methods 736
8.5.9 Stability of Real-Time Predictor–Corrector Method 738
8.5.10 Extrapolation of Real-Time Inputs 740
8.5.11 Alternate Approach to Real-Time Compatibility: Input Delay 746
Exercises 753
8.6 Additional Methods of Approximating Continuous-Time System Models 754
8.6.1 Sampling and Signal Reconstruction 754
8.6.2 First-Order Hold Signal Reconstruction 759
8.6.3 Matched Pole-Zero Method 760
8.6.4 Bilinear Transform with Prewarping 763
Exercises 765
8.7 Case Study: Lego Mindstorms™ NXT 767
8.7.1 Introduction 767
8.7.2 Requirements and Installation 769
8.7.3 Noisy Model 769
8.7.4 Filtered Model 773
8.7.5 Summary 779
Exercise 779
