<b>PART I - FUNDAMENTALS</b>	<b>1</b>
Introduction, 1	
<b>1. SOLAR RADIATION</b>	<b>3</b>
1.1 The Sun, 3	
1.2 The Solar Constant, 5	
1.3 Spectral Distribution of Extraterrestrial Radiation, 7	
1.4 Variation of Extraterrestrial Radiation, 9	
1.5 Definitions, 10	
1.6 Direction of Beam Radiation, 13	
1.7 Angles for Tracking Surfaces, 21	
1.8 Ratio of Beam Radiation on Tilted Surface to that on Horizontal Surface, 25	
1.9 Shading, 32	
1.10 Extraterrestrial Radiation on a Horizontal Surface, 39	
1.11 Summary, 44	
References, 44	
<b>2. AVAILABLE SOLAR RADIATION</b>	<b>46</b>
2.1 Definitions, 46	
2.2 Pyrheliometers and Pyrheliometric Scales, 47	
2.3 Pyranometers, 51	
2.4 Measurements of Duration of Sunshine, 57	
2.5 Solar Radiation Data, 58	
2.6 Atmospheric Attenuation of Solar Radiation, 64	
2.7 Estimation of Average Solar Radiation, 68	
2.8 Estimation of Clear Sky Radiation, 73	
2.9 Distribution of Clear and Cloudy Days and Hours, 77	
2.10 Beam and Diffuse Components of Hourly Radiation, 80	
2.11 Beam and Diffuse Components of Daily Radiation, 83	
2.12 Beam and Diffuse Components of Monthly Radiation, 85	
2.13 Estimation of Hourly Radiation from Daily Data, 87	

- 2.14 Radiation on Sloped Surfaces, 91
- 2.15 Radiation on Sloped Surfaces - Isotropic Sky, 94
- 2.16 Radiation on Sloped Surfaces - Anisotropic Sky, 96
- 2.17 Radiation Augmentation, 102
- 2.18 Beam Radiation on Moving Surfaces, 107
- 2.19 Average Radiation on Sloped Surfaces - Isotropic Sky, 109
- 2.20 Average Radiation on Sloped Surfaces - The K-T Method, 113
- 2.21 Effects of Receiving Surface Orientation, 119
- 2.22 Utilizability, 122
- 2.23 Generalized Utilizability, 125
- 2.24 Daily Utilizability, 134
- 2.25 Summary, 141
- References, 141

### **3. SELECTED HEAT TRANSFER TOPICS 147**

- 3.1 The Electromagnetic Spectrum, 147
- 3.2 Photon Radiation, 148
- 3.3 The Blackbody - a Perfect Absorber and Emitter, 148
- 3.4 Planck's Law and Wien's Displacement Law, 149
- 3.5 Stefan-Boltzmann Equation, 151
- 3.6 Radiation Tables, 151
- 3.7 Radiation Intensity and Flux, 154
- 3.8 Infrared Radiation Exchange Between Gray Surfaces, 156
- 3.9 Sky Radiation, 157
- 3.10 Radiation Heat Transfer Coefficient, 158
- 3.11 Natural Convection Between Flat Parallel Plates, 160
- 3.12 Convection Suppression, 164
- 3.13 Vee-Corrugated Enclosures, 167
- 3.14 Heat Transfer Relations for Internal Flow, 169
- 3.15 Wind Convection Coefficients, 173
- 3.16 Heat Transfer and Pressure Drop in Packed Beds, 176
- 3.17 Effectiveness - NTU Calculations for Heat Exchangers, 178
- References, 181

### **4. RADIATION CHARACTERISTICS OF OPAQUE MATERIALS 184**

- 4.1 Absorptance and Emittance, 185
- 4.2 Kirchoff's Law, 187
- 4.3 Reflectance of Surfaces, 189
- 4.4 Relationships Among Absorptance, Emittance, and Reflectance, 193
- 4.5 Broadband Emittance and Absorptance, 194
- 4.6 Calculation of Emittance and Absorptance, 196
- 4.7 Measurement of Surface Radiation Properties, 198
- 4.8 Selective Surfaces, 199

4.9	Mechanisms of Selectivity, 204	
4.10	Optimum Properties, 208	
4.11	Angular Dependence of Solar Absorptance, 209	
4.12	Absorptance of Cavity Receivers, 210	
4.13	Specularly Reflecting Surfaces, 211	
	References, 213	
<b>5.</b>	<b>RADIATION TRANSMISSION THROUGH GLAZING; ABSORBED RADIATION</b>	<b>216</b>
5.1	Reflection of Radiation, 216	
5.2	Absorption by Glazing, 220	
5.3	Optical Properties of Cover Systems, 221	
5.4	Transmittance for Diffuse Radiation, 226	
5.5	Transmittance-Absorptance Product, 228	
5.6	Angular Dependence of ( $\tau\alpha$ ), 230	
5.7	Spectral Dependence of Transmittance, 231	
5.8	Effects of Surface Layers on Transmittance, 234	
5.9	Absorbed Solar Radiation, 235	
5.10	Monthly Average Absorbed Radiation, 239	
5.11	Absorptance of Rooms, 246	
5.12	Summary, 248	
	References, 248	
<b>6.</b>	<b>FLAT-PLATE COLLECTORS</b>	<b>250</b>
6.1	Description of Flat-Plate Collectors, 250	
6.2	Basic Flat-Plate Energy Balance Equation, 251	
6.3	Temperature Distributions in Flat-Plate Collectors, 252	
6.4	Collector Overall Heat Loss Coefficient, 254	
6.5	Temperature Distribution Between Tubes and the Collector Efficiency Factor, 268	
6.6	Temperature Distribution in Flow Direction, 276	
6.7	Collector Heat Removal Factor and Flow Factor, 277	
6.8	Critical Radiation Level, 281	
6.9	Mean Fluid and Plate Temperature, 282	
6.10	Effective Transmittance-Absorptance Product, 283	
6.11	Effects of Dust and Shading, 286	
6.12	Heat Capacity Effects in Flat-Plate Collectors, 287	
6.13	Liquid Heater Plate Geometries, 291	
6.14	Air Heaters, 296	
6.15	Measurements of Collector Performance, 301	
6.16	Collector Characterizations, 302	
6.17	Collector Tests: Efficiency, Incidence Angle Modifier, and Time Constant, 303	
6.18	Test Data, 312	

- 6.19 Thermal Test Data Conversion, 316
- 6.20 Flow Rate Corrections to  $F_R(\tau\alpha)_n$  and  $F_R U_L$ , 317
- 6.21 Flow Distribution in Collectors, 320
- 6.22 *In Situ* Collector Performance, 322
- 6.23 Practical Considerations for Flat Plate Collectors, 323
- 6.24 Summary, 326  
References, 327

## 7. CONCENTRATING COLLECTORS 330

- 7.1 Collector Configurations, 331
- 7.2 Concentration Ratio, 333
- 7.3 Thermal Performance of Concentrating Collectors, 336
- 7.4 Optical Performance of Concentrating Collectors, 341
- 7.5 Cylindrical Absorber Arrays, 343
- 7.6 Optical Characteristics of Nonimaging Collectors, 345
- 7.7 Orientation and Absorbed Energy for CPC Collectors, 351
- 7.8 Performance of CPC Collectors, 356
- 7.9 Linear Imaging Concentrators - Geometry, 358
- 7.10 Images Formed by Perfect Linear Concentrators, 362
- 7.11 Images from Imperfect Linear Concentrators, 367
- 7.12 Ray-Trace Methods for Evaluating Concentrators, 369
- 7.13 Incidence Angle Modifiers and Energy Balances, 370
- 7.14 Paraboloidal Concentrators, 376
- 7.15 Central Receiver Collectors, 377
- 7.16 Practical Considerations, 378  
References, 379

## 8. ENERGY STORAGE 382

- 8.1 Process Loads and Solar Collector Outputs, 383
- 8.2 Energy Storage in Solar Process Systems, 384
- 8.3 Water Storage, 385
- 8.4 Stratification in Storage Tanks, 388
- 8.5 Packed Bed Storage, 393
- 8.6 Storage Walls, 400
- 8.7 Seasonal Storage, 403
- 8.8 Phase Change Energy Storage, 405
- 8.9 Chemical Energy Storage, 410  
References, 412

## 9. SOLAR PROCESS LOADS 414

- 9.1 Examples of Hourly Loads, 415
- 9.2 Hot Water Loads, 416
- 9.3 Space Heating Loads; Degree Days; Balance Temperature, 417

9.4	Building Loss Coefficients, 420	
9.5	Building Energy Storage Capacity, 422	
9.6	Cooling Loads, 423	
9.7	Swimming Pool Heating Loads, 423	
	References, 426	
<b>10.</b>	<b>SYSTEM THERMAL CALCULATIONS</b>	<b>427</b>
10.1	Component Models, 428	
10.2	Collector Heat Exchanger Factor, 429	
10.3	Duct and Pipe Loss Factors, 431	
10.4	Controls, 434	
10.5	Collector Arrays; Series Connections, 436	
10.6	Performance of Partially Shaded Collectors, 439	
10.7	Series Arrays with Sections with Different Orientation, 441	
10.8	Use of Modified Collector Equations, 444	
10.9	System Models, 447	
10.10	Solar Fraction, 450	
10.11	Summary, 451	
	References, 452	
<b>11.</b>	<b>SOLAR PROCESS ECONOMICS</b>	<b>453</b>
11.1	Costs of Solar Process Systems, 454	
11.2	Design Variables, 457	
11.3	Economic Figures of Merit, 458	
11.4	Discounting and Inflation, 461	
11.5	Present Worth Factor, 463	
11.6	Life Cycle Savings Method, 466	
11.7	Evaluation of Other Economic Indicators, 471	
11.8	The $P_1, P_2$ Method, 474	
11.9	Uncertainties in Economic Analyses, 480	
11.10	Summary, 483	
	References, 484	
 <b>PART II - APPLICATIONS</b>		
	Introduction, 485	
<b>12.</b>	<b>SOLAR WATER HEATING - ACTIVE AND PASSIVE</b>	<b>487</b>
12.1	Water Heating Systems, 487	
12.2	Freezing and Boiling, 492	
12.3	Auxiliary Energy, 494	

- 12.4 Forced-Circulation Systems, 496
- 12.5 Low-Flow Pumped Systems, 498
- 12.6 Natural Circulation Systems, 499
- 12.7 Integral Collector Storage Systems, 502
- 12.8 Retrofit Water Heaters, 505
- 12.9 Water Heating in Space Heating and Cooling Systems, 506
- 12.10 Testing of Solar Water Heaters, 506
- 12.11 Economics of Solar Water Heating, 507
- 12.12 Swimming Pool Heating, 510
- 12.13 Summary, 512
  - References, 512

### **13. BUILDING HEATING - ACTIVE 514**

- 13.1 Historical Notes, 515
- 13.2 Solar Heating Systems, 516
- 13.3 CSU House III Flat-Plate Liquid System, 521
- 13.4 CSU House II Air System, 525
- 13.5 A Heating System Parametric Study, 527
- 13.6 Solar Energy-Heat Pump Systems, 531
- 13.7 Phase Change Storage Systems, 537
- 13.8 Seasonal Energy Storage Systems, 540
- 13.9 Solar and Off-Peak Electric Systems, 544
- 13.10 Solar Heating Economics, 545
- 13.11 Architectural Considerations, 549
  - References, 550

### **14. BUILDING HEATING: PASSIVE AND HYBRID METHODS 555**

- 14.1 Concepts of Passive Heating, 556
- 14.2 Comfort Criteria and Heating Loads, 557
- 14.3 Movable Insulation and Controls, 557
- 14.4 Shading: Overhangs and Wingwalls, 558
- 14.5 Direct-Gain Systems, 564
- 14.6 Collector-Storage Walls and Roofs, 569
- 14.7 Sunspaces, 573
- 14.8 Active Collection-Passive Storage Hybrid Systems, 575
- 14.9 Other Hybrid Systems, 577
- 14.10 Passive Applications, 578
- 14.11 Heat Distribution in Passive Buildings, 583
- 14.12 Costs and Economics of Passive Heating, 584
  - References, 586

<b>15. COOLING</b>	<b>588</b>
15.1 Solar Absorption Cooling, 588	
15.2 Theory of Absorption Cooling, 591	
15.3 Combined Solar Heating and Cooling, 597	
15.4 A Simulation Study of Solar Air Conditioning, 599	
15.5 Operating Experience with Solar Cooling, 602	
15.6 Applications of Solar Absorption Air Conditioning, 605	
15.7 Solar Desiccant Cooling, 606	
15.8 Ventilation and Recirculation Desiccant Cycles, 609	
15.9 Solar-Mechanical Cooling, 611	
15.10 Solar-Related Air Conditioning, 614	
15.11 Passive Cooling, 616	
References, 617	
<b>16. INDUSTRIAL PROCESS HEAT</b>	<b>620</b>
16.1 Integration with Industrial Processes, 620	
16.2 Mechanical Design Considerations, 621	
16.3 Economics of Industrial Process Heat, 622	
16.4 Open Circuit Air Heating Applications, 623	
16.5 Recirculating Air System Applications, 627	
16.6 Once-Through Industrial Water Heating, 630	
16.7 Recirculating Industrial Water Heating, 632	
16.8 Shallow Pond Water Heaters, 634	
16.9 Summary, 636	
References, 636	
<b>17. SOLAR THERMAL POWER SYSTEMS</b>	<b>638</b>
17.1 Thermal Conversion Systems, 638	
17.2 The Gila Bend Pumping System, 639	
17.3 The Luz Systems, 641	
17.4 Central Receiver Systems, 644	
17.5 Solar One Power Plant, 646	
References, 649	
<b>18. SOLAR PONDS; EVAPORATIVE PROCESSES</b>	<b>651</b>
18.1 Salt-Gradient Solar Ponds, 651	
18.2 Pond Theory, 654	
18.3 Applications of Ponds, 655	
18.4 Solar Distillation, 657	
18.5 Evaporation, 663	
18.6 Direct Solar Drying, 664	
18.7 Summary, 665	
References, 665	

**PART III - THERMAL DESIGN METHODS**

Introduction, 667

- 19 SIMULATIONS IN SOLAR PROCESS DESIGN 669**
- 19.1 Simulation Programs, 669
  - 19.2 The Utility of Simulations, 671
  - 19.3 Information from Simulations, 672
  - 19.4 TRNSYS, a Thermal Process Simulation Program, 674
  - 19.5 Simulations and Experiments, 679
  - 19.6 Meteorological Data, 681
  - 19.7 Limitations of Simulations, 683
  - References, 683
- 20. DESIGN OF ACTIVE SYSTEMS BY  $f$ -CHART 686**
- 20.1 Review of Design Methods, 686
  - 20.2 The  $f$ -Chart Method, 687
  - 20.3 The  $f$ -Chart for Liquid Systems, 692
  - 20.4 The  $f$ -Chart for Air Systems, 698
  - 20.5 Service Water Heating Systems, 702
  - 20.6  $f$ -Chart Results, 704
  - 20.7 Parallel Solar Energy-Heat Pump Systems, 707
  - 20.8 Summary, 710
  - References, 711
- 21. DESIGN OF ACTIVE SYSTEMS BY UTILIZABILITY METHODS 712**
- 21.1 Hourly Utilizability, 713
  - 21.2 Daily Utilizability, 716
  - 21.3 The  $\bar{\phi}$ ,  $f$ -Chart Method, 720
  - 21.4 Summary, 731
  - References, 732
- 22. DESIGN OF PASSIVE AND HYBRID HEATING SYSTEMS 733**
- 22.1 Approaches to Passive Design, 733
  - 22.2 The Solar-Load Ratio Method, 734
  - 22.3 The Unutilizability Design Method: Direct-Gain, 743
  - 22.4 The Unutilizability Design Method: Collector-Storage Walls, 750
  - 22.5 Hybrid Systems: Active Collection with Passive Storage, 759
  - 22.6 Other Hybrid Systems, 766
  - References, 767

**23. DESIGN OF PHOTOVOLTAIC SYSTEMS 768**

- 23.1 Photovoltaic Converters, 769
- 23.2 PV Generator Characteristics and Models, 770
- 23.3 Cell Temperature, 779
- 23.4 Load Characteristics and Direct-Coupled Systems, 781
- 23.5 Controls; Maximum Power Point Trackers, 784
- 23.6 Applications, 785
- 23.7 Design Procedures, 786
- 23.8 High-Flux PV Generators, 792
- 23.9 Summary, 793
  - References, 793

**APPENDICES**

- A. Problems, 795
- B. Nomenclature, 824
- C. International System of Units, 828
- D. Monthly  $R_b$  as Function of  $\phi$  and  $(\phi - \beta)$ , 830
- E. Properties of Materials, 835
- F. Present Worth Factors, 840
- G. Meteorological Data, 843
- H. Solar Position Diagrams, 882
- I Average Shading Factors for Overhangs, 888

**Author Index 905****Subject Index 913**
