Preface	<i>xi</i>
<b>1. A Preliminary Study of Some Important Mathematical Models from Chemical Engineering</b>	<b>1</b>
Introduction, <i>1</i> .	
1.1 The General Mathematical Model, <i>3</i> .	
1.2 Steady State Homogeneous Flow Model for a Reacting System, <i>10</i> .	
1.3 Steady State and Transient Models for Solids, <i>23</i> .	
1.4 Heterogenous Model for a Reacting System, <i>34</i> .	
1.5 A Model for Hollow-Fiber Reverse-Osmosis Systems, <i>40</i> .	
1.6 Flow of Polymer Melts in Extruders, <i>45</i> .	
1.7 Solution of Linear Differential Equations, <i>50</i> .	
Exercises, <i>59</i> .	
References, <i>61</i> .	
<b>2. Polynomial Approximation— A First View of Construction Principles</b>	<b>67</b>
Introduction, <i>67</i> .	
2.1 A Taylor Series Approximation, <i>68</i> .	

- 2.2 The Lowest-Order MWR Approximations  $y_1(x)$ , 73.
- 2.3 Higher-Order MWR Approximations  $y_N(x)$ , 77.
- 2.4 Nonlinear Problems, 92.
- 2.5 Reformulations of the  $N$ th-Order Approximation  $y_N(x)$ , 98.
- Exercises, 108.
- References, 109.

### 3. Some Important Properties of Orthogonal Polynomials— Formulation of a Standard Collocation Procedure 111

- Introduction, 111.
- 3.1 The Power Series Representation of  $P_N^{(\alpha, \beta)}(x)$ , 112.
- 3.2 Zeros of Orthogonal Polynomials, 115.
- 3.3 Differentiation and Integration of Lagrange Interpolation Polynomials, 118.
- 3.4 Program Description, 131.
- 3.5 Discretization of Differential Equations in Terms of Ordinates, 135.
- Exercises, 138.
- References, 141.

### 4. Solution of Linear Differential Equations By Collocation 143

- Introduction, 143.
- 4.1 Solution of a Linear Boundary Value Problem, 144.
- 4.2 Integration of Initial Value Problems, 148.
- 4.3 Linear Parabolic Differential Equations, 166.
- 4.4 Collocation Solution of a Linear PDE Compared to Exact Solution, 175
- 4.5 Construction of Eigenfunctions by Forward Integration, 183.
- 4.6 An Ordinary Differential Equation at the Boundary of a PDE, 188.
- Exercises, 191.
- References, 196.

### 5. Nonlinear Ordinary Differential Equations 198

- Introduction, 198.
- 5.1 Multiple Solutions of a Trivial Boundary Value Problem, 200.

5.2	Existence and Uniqueness Theorems, 204.	
5.3	Application of Comparison Differential Equations, 207.	
5.4	Global Collocation Solution of a Nonlinear Differential Equation, 212.	
5.5	Concentration Profiles for Nonisothermal Reactions, 215.	
	Exercises, 228.	
	References, 230.	
<b>6.</b>	<b>One-Point Collocation</b>	<b>232</b>
	Introduction, 232.	
6.1	Application of One-Point Collocation to Ordinary Differential Equations, 233.	
6.2	Application of One-Point Collocation to Partial Differential Equations, 253	
6.3	One-Point Collocation for Initial Value Problems, 266.	
	Exercises, 269.	
	References, 271.	
<b>7.</b>	<b>Global Spline Collocation</b>	<b>273</b>
	Introduction, 273.	
7.1	Global Spline Collocation for Two-Point Boundary Value Problems, 274.	
7.2	Eigenvalues and Entry Length Problems by Spline Collocation, 285.	
	Exercises, 293.	
	References, 295.	
<b>8.</b>	<b>Coupled Differential Equations</b>	<b>297</b>
	Introduction, 297.	
8.1	On the Numerical Structuring of Coupled Differential Equations, 299.	
8.2	The General Initial Value Problem—Accuracy, Convergence, and Stability Considerations, 305.	
8.3	Sensitivity Functions, 328.	
8.4	Partial Differential Equations, 332.	
	Exercises, 335.	
	References, 344.	

<b>9. Selected Research Problems</b>	<b>347</b>
Introduction, 347	
9.1 The Graetz Problem with Axial Conduction, 348.	
9.2 Asymptotic Stability of a Catalyst Particle, 365.	
9.3 Fixed Bed Reactor Dynamics—Transfer Functions and State Space Formulation by Collocation, 394.	
Exercises, 405.	
References, 413.	
<b>Appendix A:</b>	
<b>Computer Programs with Test Examples</b>	<b>417</b>
<b>Subject Index</b>	<b>441</b>
<b>Author Index</b>	<b>445</b>
